**Re: Rebuttal of Iviewit Holdings, Inc. to Response of William J. Dick, VSB
Docket #04-052-1366**

Dear Attorney Sengel:

By way of introduction, I am Founder & President (Acting) of Iviewit Holdings, Inc. and its subsidiaries (collectively, "Company"), I have co-authored this document and signed with P. Stephen Lamont Chief Executive Officer (Acting). I write to rebut all those material feints and contradictions in the response of William J. Dick, Esq. ("Respondent") to the Company's Virginia Bar Complaint of September 23, 2003, more precisely defined by the Company's letter of October 30, 2003 (collectively, "Complaint").

Moreover, Respondent's feints are so numerous, so outlandish of nature, and, hence, so consumed with falsehoods, akin to the falsehoods he attempted to inflict upon the Company, that prior to arriving at the very hearts of the matters, it is only fair to outline them in paragraph form with corresponding headings, the contents of which shall clearly show Respondent's bountiful attempts at insults to the intelligences of the Virginia Bar, and what follows below is an introduction to those feints and the eventual evidentiary materials of the Complaint.

Lastly, from the benefit of the narrative and attached exhibits below, the Company shall prove beyond a reasonable doubt that Respondent, though not directly prosecuting patents himself, otherwise oversaw, directed, controlled, feloniously opined, sometimes impeded, altogether unfavorably aided and abetted, and otherwise positioned himself

Noel D. Sengel
March 22, 2004
Page 2

between said patent prosecutions, Utley, and the *bona fide* inventors all to the detriment of the patent filings and fortunes of the Company.

Accordingly, on behalf of the Company, and for ease of reference I insert the major allegations of the Complaint within the framework of the Rules of Professional Conduct of the Virginia State Bar, so that the Virginia Bar may further quantify Respondent's professional misconduct as to Virginia attorneys, and shall cite specific documentation in exhibits attached hereto.

Finally, per our conversation last week, we went to secure the patent files from the patent office on several patents listed on the Company portfolio and filed by William Dick and his underlings at Foley & Lardner and we were unable to get records because to our surprise the Company is not listed on these filings in Brian Utley's sole name. The Company and the Company inventors are not listed on the application and therefore have no rights, title or interest in some of these patents and await further confirmation from the USPTO of such. We may, according to the USPTO, in fact have to sue Mr. Brian Utley under his employment contract to receive these patents back and therefore we request the Virginia Bar allow us to submit these documents as we receive them, as you stated that would be allowable. Therefore, we submit the complaint response without them. Further, if this information gathered from the United States Patent & Trademark Office is correct, it then becomes apparent that the portfolio submitted to the Virginia Bar in Mr. Dick's response is materially false as patents that are not the property of Iviewit should not be listed on an Iviewit Intellectual Property docket. This docket similarly has been used to raise capital for the Company and thus constitutes fraud upon the shareholders and the Virginia Bar.

Again, we have filed this complaint without access to our original files (a large part of the delay caused by lost files by our former attorneys) and therefore since we are awaiting further evidence to support the allegations accurately we have signed this copy and yet remain obligated to update you as new information is forwarded or secured. We also explained the problems we faced this weekend and hoped you would grant time and leeway but we were unable to reach you today and therefore we send this incomplete draft with much of the pertinent information and thank you for the opportunity to send a final copy shortly.

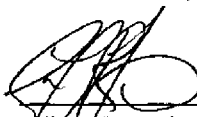

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 3

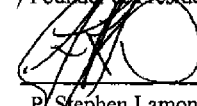

Due to the volume of information contained in the exhibits, we have submitted this response and all the documentation on a CD-ROM in Adobe format for ease of review. If the Virginia Bar would like a printed copy of the several thousand pages contained therein we would be more than happy to comply with such request. If viewing the Adobe document it is extremely helpful to use the "bookmark" tab along the left side of the page for easy indexing.

Very truly yours,

IVIEWIT HOLDINGS, INC.

LIMITED POWER OF ATTORNEY

I. PARTIES. I, P. Stephen Lamont ("Principal"), with a principal address of Four Ward Street, Brewster, New York hereby appoint Eliot I. Bernstein ("Attorney-in-Fact") with a principal address of 10158 Stonehenge Circle, Suite 801, Boynton Beach, Fla. and telephone number of 561-364-4240 as attorney-in-fact to represent me in affairs consisting only of those powers listed in Section II herein.

II. POWERS.

1. Execution of Signature Page for Iviewit Bar Complaint of William J. Dick..

III. DURATION. Said Attorney-in-Fact shall, subject to revocation in writing, have authority to conduct items one (1) above and perform on behalf of Principal: All acts necessary and requisite to facilitate said functions and/or proceedings from the period March 21, 2004 through April 20, 2004 ("Duration").

IV. OTHER ACTS.

1. None.

V. MISCELLANEOUS.

1. NOTICES. Copies of notices and other written communications addressed to the Principal in proceedings involving the above matters should be sent to the address set forth above.

2. CONFORMANCE TO STATE LAW. It is the intention of the parties that this Limited Power of Attorney conform to the laws of the State of New York, and should any section of this Limited Power of Attorney not conform to the laws of the State of New York, it is the intention of the parties that said section(s) be substituted for that section that would otherwise conform to the laws of the State of New York. Should the laws of the State of New York require any other section(s) other than the sections of this Limited Power of Attorney, it is the intention of the parties, that said section(s) be construed to be included in this Limited Power of Attorney, as if said sections were included herein.

3. NO PRIOR POWERS. This Limited Power of Attorney revokes all prior powers of attorney by and between Principal and Attorney-in-Fact with respect to the same matters and years or periods covered by this instrument.

THE COMPANY’S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

I. INTRODUCTION

This subsection provides a convenient reference to the point in time and unequivocally points to Respondent's involvement in the patent prosecution process with Brian G. Utley ("Utley") who, from this point forward, aids and abets Respondent's professional misconducts in representation of the Company.

Moreover, upon referral by a one Christopher C. Wheeler ("Wheeler"), a Partner in the Boca Raton, Fla. office of Proskauer Rose LLP ("Proskauer"), the Company appoints Utley as President & Chief Operating Officer of the Company in 1999; Utley began working for the Company and reviewing the provisional patent filings on or about June 1999. Furthermore, in Respondent's role as overseer of the Company's patent portfolio, the evidence of which is attested to by Section II and III and the Exhibits thereto in collusion with Mr. Utley, the Company finds Mr. Utley, after his termination by the Company, and through the work of Blakely Sokoloff Zafman & Taylor LLP ("BSTZ"), writing Company inventions into his own name without assignment to the Company, and sent to his home address, using Respondent; Wheeler played a role in recommending Respondent as the Company's new patent counsel with Utley to replace Raymond A. Joao ("Joao"), formerly of counsel to Meltzer Lippe Goldstein & Schlissel LLP ("MLGS") and Respondent, factually, attended several of the initial patent meetings with his then employer, Foley & Lardner LLP ("Foley"), of which full disclosures by the inventors was given to Mr. Dick and the strategy the Company would follow was determined by Mr. Dick and Mr. Dick was hired to execute his strategy for the Company. Mr. Dick then brought in two of his underlings he mentored at Foley and later was aware of several meetings in which the errors of Joao (including fraud upon the United States Patent and Trademark Office) were discussed with his associates, as well as discussions of further errors by Foley, under Respondent's direction that have caused the Company further hardships. Moreover, Respondent was the patent attorney for Utley in his alleged misappropriations of intellectual property from his past employer, Diamond Turf Equipment, Inc. ("DTE") (see Section II, paragraph A below) and the events are so similar in nature to Iviewit's problems with Mr. Dick and Mr. Utley as to leave one wondering how Mr. Dick can now try and say that he was not involved in these events blaming his underlings instead.

Moreover, in an effort to aid the Virginia Bar in its review of the circumstances surrounding the factual allegations of the Complaint, the Company attaches as Exhibit A

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel

Page 7

herein the submitted resume of Utley by Wheeler and excerpts from depositions in a certain litigation titled *Proskauer Rose LLP v. Iviewit.com, Inc. et. al.*, Case No. CA 01-04671 AB (Circuit Court of the 15th Judicial Circuit in and for Palm Beach County, Florida filed May 2, 2001) ("Florida State Litigation"), the resume of which misrepresents Utley's tenure and termination at DTE, and the involvement of, recommended by Wheeler and Mr. Utley, Respondent in said DTE circumstances. Moreover, from the first of Wheeler's introduction of Utley to the Company, and although Wheeler is continually copied on Utley's biography in various drafts of Company business plans authored and disseminated by Wheeler, and Wheeler's representations of Utley to various Board members of the Company, Wheeler claims he was uncertain of the Utley resume misrepresentations, was negligent in recommending and forcing the appointment of Utley as the only means for the Company to secure the seed investment of Huizenga Holdings, without Wheeler's own prior independent background checks of Utley, though by Wheeler's testimony in the Florida State Litigation, states he had known Mr. Utley in social surroundings since 1990, had formed a corporation with him, upon information and belief the Premiere Connections company referenced by Respondent, on or about 1994, continues to know Utley in social surroundings until introduction to the Company in 1999, and thereafter serves as chief counsel to the Company and self-appointed overseer of the Company's patent portfolio with Rubenstein and Joao prior, in collusion with Mr. Utley, to the arrival of Respondent in or about 2000; Utley, for his part, and under deposition in the Florida State Litigation, claims Wheeler was fully cognizant of the circumstances surrounding his patent malfeasances at DTE.

Additionally, the Company's references the sworn testimony of Utley in the Florida State Litigation wherein Utley directly refutes oral statements collected by the Company from Monte Friedkin, the principal of DTE ("Friedkin") and a resident of the State of Florida with a telephone number of 954-972-3222 x310, who relates to the Company and Caroline P. Rogers, Esq. ("Rogers") a resident of the State of Illinois with a telephone number of (708) 450-9400 x19, that Utley's tenure was marred by misappropriations of intellectual property naming Utley as an inventor, with no assignment to his employer, for inventions learned while working for said employer and written with the assistance of Respondent. Moreover, Friedkin stated that these circumstances led to the closure of his business in diametric opposition to the aforementioned resume of Utley, a biography that Wheeler authored, reviewed, and approved for many business plans which states that due to Utley's inventions in his position, DTE proceeded to good fortunes. It is interesting to note that, in his resume, Utley claims the innovative designs were done on the job by Friedkin's engineering group and yet he attempts to patent those ideas as his own in a separate company set up by Wheeler and prosecuted by Respondent. Equally interesting, to note that Utley states to the Virginia Bar, that he told Eliot I. Bernstein ("Bernstein"),

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 8

founder of the Company, of the past patent disputes, yet submits through Wheeler, a resume remiss of these facts and with information that is contrary to the truth.

Furthermore, upon the conclusion that the provisional patent filings for the Company by Joao, and under the oversight of Rubenstein, that Joao had done a poor job of capturing the inventions, that Joao had failed to list all *bona fide* inventors, and was found to be writing patents in his own name similar to disclosures made to him by the Company, Wheeler and Utley suggest, as Mr. Joao's replacement, Respondent and that Rubenstein would work well with the Respondent who would handle the filings while Rubenstein would handle potential litigations. Unbeknownst to the Company, it was Respondent who had been involved with Utley regarding intellectual property disputes at the DTE company; Respondent, owing a duty of forthrighteousness, absent of any suspicions of wrongdoings alleged in the Complaint, did not disclose such happenings by and between Respondent, Utley, and DTE. Had these issues been exposed by Respondent, Utley and Wheeler truthfully, it would be highly unlikely that the Company and its Board of Directors would have ever retained Respondent, Utley or Wheeler. Further, Utley in his deposition states that Iviewit never hired Mr. Dick and that he only referred the Company to Foley, yet the Foley bills are full of entries by Dick and in meetings with Wachovia and other investors who relied on Mr. Dick's assessments and strategies and not his underlings.

Moreover, equally devastating to the Company's prospects, under the oversight of Respondent as the overseer of the Company's patent portfolio, the evidence of which is attested to by Section III, paragraphs A to F below, the oversight of Respondent results in the filing of patents with: (i) incorrect math; (ii) further filing patents with missing inventors with full knowledge of the rightful inventors; (iii) changing patent titles and content to harm the Company's prospects; (iv) without any knowledge of the Company, filing of patents into Utley's own name, with no assignment to the Company for Company inventions in an attempt by Utley and Respondent to make a "spectacular grab" for the Company inventions, heralded as having the potential to generate billions of dollars in revenue on an annual basis, and similar to the contentions of Utley's past employer, DTE; and (v) the knowing and willful incorrect conclusions that certain patent bodies could not be rewritten as they contain new subject matter, and inventors can be easily changed (except in instances where intent to deceive the USPTO is the case as is the case with Iviewit) in contradiction to the views of the Company's current patent review counsel and the United States Patent & Trademark Office.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

II. RESPONSE TO RESPONDENT'S MISINFORMATION

DISCLAIMER: Throughout this Section II, the Company does not attest to the validity of any documents as the Company cannot source original documents that have been lost by past patent counsels and, further, that it is the Company's contention that many of such documents may be fraudulent representations of the originals in an effort by past patent counsels, including Foley, to cloak the professional misconducts enumerated herein. Both Joao and Foley maintain that they have not even kept copies, including their retainer agreements, which have not been forwarded, nor does the Company have copies in its possession.

A. Respondent's Reference to the Company's Mention of Respondent's Involvement in the Diversion of Patents to DTE as Not Relevant to Iviewit¹.

First, the Company instructs Respondent that the Complaint is not akin to the procedural rules in a court of law, whereby the Federal Rules of Civil Procedure, or its counterpart in any State court, may preclude pleadings in support of the pattern of professional misconduct by Respondent and the breaching of fiduciary duties by Utley. Moreover, following upon the introduction to this misinformation above, the Company submits this pattern of misconduct by Respondent to support the factual allegations below.

Consequently, when Respondent embraces the argument that the diversion of intellectual property by Respondent and Utley is not relevant to the Complaint, Respondent's rationale is a feint that constitutes the first of Respondent's copious attempts at insults to the intelligences of the Virginia Bar.

Furthermore, and upon information and belief, the Company is aware of certain patent assignments by the Premier Connections company of Utley, formed by Wheeler, and attested as the applicant by Respondent of those certain DTE inventions therefore, the Company suspects that this pattern of professional misconduct by Respondent, with the collusion of Utley and Wheeler, may have a history prior to the DTE circumstances, but more investigation would be needed.

Finally, while it is the Company's end with respect to the Complaint to charge the Respondent with the professional misconducts cited herein, it is only fair to advise the

¹ William J. Dick, Declaration of William J. Dick in Response to the Complaint From P. Stephen Lamont of Iviewit Holdings, Inc., VSB Docket #04-052-1366, 6 (January 8, 2004).

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 10

Virginia Bar that, upon investigation, the allegations cited in this paragraph, *interalia*, constitute intent to deceive the United States Patent and Trademark Office (“USPTO”).

B. Respondent’s Reference to No Granted Patent in the Name of Utley².

In this respect, Respondent’s attempt to mislead the Virginia Bar is frighteningly misrepresentative, and bordering on the outright falsehoods he inflicted upon the Company, to the Virginia Bar on account of the patent filing following lineage attached herein as Exhibit B.

Consequently, when Respondent challenges the Company to put forth one granted patent (the eight step process described in Exhibit B) in the name of Utley, Respondent conveniently fails to mention the patterns of deception that occurred according to the lineage of Exhibit B, and where he conveniently fails to mention the patterns of deception, but steadfastly clings to the singular argument of one granted patent, Respondent’s argument is a feint that constitutes the second of Respondent’s ample attempts at insults to the intelligences of the Virginia Bar.

In fact, the mere application by Utley, the neglect in assignment by Utley, Dick and Wheeler, currently leaves the shareholders of the Company in a state of loss that borders on catastrophic. Finally, while it is the Company’s end with respect to the Complaint to charge the Respondent with the professional misconducts cited herein, it is only fair to advise the Virginia Bar that, upon investigation, the allegations cited in this paragraph, *interalia*, constitute intent to deceive the USPTO.

C. Respondent’s Reference to Lack of Assignment Provisions Under Utley’s Employment Contract with DTE³.

In this instance, Respondent again attempts to mislead the Virginia Bar by citing the technical shortcomings of the Utley employment contract with DTE, Utley’s just prior employer to the Company, by citing the technical aspect of a lack of an intellectual property assignment provision in Utley employment contract with DTE, a company manufacturing golf course equipment.

Moreover, what Respondent fails to mention to the Virginia Bar is that under common law as well as decisional law, courts have held that all work product of an employee becomes property of his or her employer, for, if not, then all employees, of any company,

² Supra Note 1 at 4.

³ Supra Note 1 at 2

THE COMPANY’S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 11

in any State, and in any country on the planet, could then become competitors of their employers, thus confounding workplace productivity gains and the bond of trust inherent in any employee-employer relationship. Furthermore, recall the Utley resume of Exhibit A that states that his inventions contributed to the success of DTE and then claims that he would not assign them to DTE when Friedkin inadvertently discovered the patents Utley was claiming in his individual capacity; relying on the oral statements of Friedkin, this is why Utley was fired (also not in the resume and cloaked in his Virginia Bar statements of Utley to mislead ones of the truth) and Friedkin dissolved DTE incurring an approximate Three Million Dollar (\$3,000,000) loss. Respondent and Utley both attempt to mislead the Virginia Bar to believe that Mr. Utley "left" DTE when in fact he was terminated with cause, as is the exact case with Iviewit.

Additionally, by the formation of a separate company with Wheeler, to misappropriate inventions with Respondent, whereby it is already part of the record in the response of Respondent, that Respondent was aware of Utley's employment with DTE and, therefore, knew the relation of the patent pending invention, a hydraulic motor circuit device, to the position held by Utley, and the Company finds itself asking "Was the intention of Utley and Respondent to form a licensor-licensee relationship with DTE as well as Utley's role as President," and finds itself answering "No, but only when Utley and Respondent continue their pattern of invention misappropriation similar in respect to the Complaint of the Company. This shows the diabolical nature of Utley and Respondent and their continued pattern of lies and deceit that have now caused great harm upon two South Florida businesses.

Moreover, Utley, in his deposition statement in the Florida State Litigation, states that Wheeler never did any work for him in the past and then in Wheeler's deposition in the Florida State Litigation, he states that he formed the Premiere Connections company for Utley, and one may conclude that Respondent, Utley, and Wheeler, have had similar involvement in the circumstances surrounding DTE, and then proceeded on to cause problems at the Company that acted as the trigger for the Complaint, but more investigation would be needed as to the tripartite or dual nature of the Respondent/Utley pattern of deception.

Consequently, when Respondent clings to the technical aspects of Utley's employment contract with DTE, and where he conveniently fails to mention the common law, as well as decisional law, requirements of all an employee's work product becoming property of his or her employer, but steadfastly embraces to the singular argument of the absence of an intellectual property clause in Utley's DTE employment contract, that was the basis for attempting invention theft from DTE and Friedkin, Respondent's argument is a feint

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 12

that constitutes the third of Respondent's abundant attempts at insults to the intelligences of the Virginia Bar.

Finally, while it is the Company's end with respect to the Complaint to charge the Respondent with the professional misconducts cited herein, it is only fair to advise the Virginia Bar that, upon investigation, the allegations cited in this paragraph, *inter alia*, constitute intent to deceive the USPTO.

D. Respondent's Reference to Assignment Requirements Under Utley's Employment Contract With the Company⁴.

Here, Respondent again attempts to mislead the Virginia Bar by citing the technical positive aspects of the Utley employment contract with the Company, by citing an intellectual property assignment provision in Utley employment contract with the Company, a technology company designing and developing video frame manipulation techniques and digital zoom and pan systems.

Furthermore, what Respondent fails to mention to the Virginia Bar is that under the Patent Act, courts have held that where all *bona fide* inventors fail to be named on any provisional or non-provisional patent application, the assignment of that patent application fails, but only for any correctly named *bona fide* inventor. In other words, where Respondent knowingly and willfully inserts the name of Utley on any of the Company's provisional or non-provisional patent applications, the Company only benefits from the eventual assignment of a *bona fide* inventor, but not the other *bona fide* inventors that Respondent effectively "bumps off" the patent application and substitutes them with Utley; in some cases, the Company benefits from only two thirds of the invention (Bernstein/Utley/Shirajee or Rosario patent applications) or one-third of the invention (Bernstein and Utley patent applications) or none of the invention (Utley only patent applications), and irrespective of whether said patent application was abandoned or continued or denied or issued, the subjects of which are described below and all according the intellectual property docket of Blakely Sokoloff Zafman & Taylor LLP ("BSTZ"), the Company's most recent patent counsel, attached herein as Exhibit C. We have also enclosed a new portfolio updated with the USPTO that confirms many of the Company's allegations.

Moreover, as it is plain to see, Exhibit C contains patent applications written into Utley; the filing of a patent application requires the submission of Declaration that requires *bona fide* inventors to sign oaths and Respondent had those oaths signed and submitted to the

⁴ Supra Note 1 at 4.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 13

USPTO with knowingly wrong information by both the Respondent in his supervisory capacity and Utley. Still further, in Utley's deposition in the Florida State Litigation when asked about his knowledge of patent applications in his name, Utley denies such knowledge, and such patent applications in Utley are not the property of the Company, and further, when asked about the Company's technology being embedded into digital cameras, Utley steadfastly, again denies such knowledge, when it is plain to see from Exhibit C that Utley is the named inventor on a Foley patent application, written under the supervision of Respondent, titled "Zoom and Pan Imaging Design Tool" and "Zoom and Pan Imaging Using a Digital Camera;" Respondent withholds these records from the Company.

Additionally, where harm befalls the Company, it similarly befalls its stakeholders such as its shareholders, fraud on a registered bank holding company Wachovia Corporation through its affiliate Wachovia Securities, Inc., and others who were under the impression that the Company had full right, title, and interest in the patent applications; the uncovering of this debacle led Wachovia to remove itself from a potential private placement of \$12 million for the Company, as well as the likes of AOL/Time Warner and SONY Corporation canceling licensing agreements and strategic investments in the Company, where, upon information and belief, the lieutenant of Respondent, Douglas A. Boehm ("Boehm") of Foley, was terminated as a result of these circumstances under the direction of Respondent in the continuance of his pattern of invention misappropriations with Utley⁵. Many assignments were never made and many patents have been allowed to lapse due to this negligence.

Consequently, when Respondent clings to the technical aspects of Utley's employment contract with the Company, and where he conveniently fails to mention the Patent Act's requirements of all *bona fide* inventors named on a patent application for undisputed assignment of the invention to the Company, but steadfastly embraces to the singular argument of the intellectual property clause in the Utley employment contract with the Company, Respondent's argument is a feint that constitutes the fourth of Respondent's profuse attempts at insults to the intelligences of the Virginia Bar.

Finally, while it is the Company's end with respect to the Complaint to charge the Respondent with the professional misconducts cited herein, it is only fair to advise the

⁵ It was represented by Becker of Foley that Boehm was fired for filing patents with knowingly wrong content and became the scapegoat for Foley after an August 4, 2000 meeting in which the main topic of discussion was how errors that were found a day before filing on patent applications never seen by the Company, and found in Utley's possession, the errors of which constituted errors in inventors, content, and math of the inventions.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 14

Virginia Bar that, upon investigation, the allegations cited in this paragraph, *interalia*, constitute intent to deceive the USPTO.

E. Respondent's Reference to Listed Inventors Bernstein, Utley, Rosario, Shirajee, and Friedstein in Various Combinations⁶.

In this respect, Respondent's attempt to mislead the Virginia Bar is frighteningly misrepresentative, and bordering on the outright falsehoods he inflicted upon the Company, to the Virginia Bar on account when he so casually inserts Paris Conference Treaty ("PCT") cover pages into his response citing listed inventors as Bernstein, Utley, Rosario, Shirajee, and Friedstein, in various combination.

Furthermore, and as stated in paragraph D above, what Respondent fails to mention to the Virginia Bar is that under the Patent Act, courts have held that where all *bona fide* inventors fail to be named on any provisional or non-provisional patent application, the assignment of that patent applications fails, but only for any correctly named *bona fide* inventor. In other words, where Respondent knowingly and willfully inserts the name of Utley on any of the Company's provisional, non-provisional, or PCT patent applications, the Company only benefits from the eventual assignment of a *bona fide* inventor, but not the other *bona fide* inventors that Respondent effectively "bumps off" the patent application and substitutes them with Utley; in some cases, the Company benefits from only two thirds of the invention (Bernstein/Utley/Shirajee or Rosario patent applications) or one-third of the invention (Bernstein and Utley patent applications) or none of the invention (Utley only patent applications), and irrespective of whether said patent application was abandoned or continued, the subjects of which are described below, and all according to Exhibit C. Again, since Utley should not be an inventor on these applications as the inventions were done by others, these points become mute in light of the fact that the Company has now been forced to file with the USPTO the claim of "intent to deceive" when changing the patents as the simple fix attested to by Respondent only works when clerical errors are the cause. The Company now must have inventors added or subtracted through a much more time consuming and costly fashion.

Moreover, the Company theorizes, that the only reason these combinations exist is as a result of the confrontation between the inventors and Utley (see Section III for the many differing and incorrect combinations of inventors) and that Respondent had to account for a second set of patents naming Utley as sole inventor; several of these filings have no inventor oaths or signatures which is not uncommon except in instances whereby

⁶ Ibid.

Noel D. Sengel
 March 22, 2004
 Page 15

inventors are added without knowledge of other inventors, all part and parcel of Respondent's elaborate cover up.

Consequently, when Respondent embraces the various combinations of *bona fide* inventors, and where he conveniently fails to mention the Patent Act's requirements of all *bona fide* inventors named on a patent application for undisputed assignment of the invention to the Company, but steadfastly clings to the singular argument of the various combinations of *bona fide* inventors, except for Utley, Respondent's argument is a feint that constitutes the fifth of Respondent's copious attempts at insults to the intelligences of the Virginia Bar. When Mr. Utley is included in application this is materially false and now causes the Company harm in fixing such applications with USPTO. Were assignments are today still incomplete, investors and potential investors are concerned over what they own.

Finally, while it is the Company's end with respect to the Complaint to charge the Respondent with the professional misconducts cited herein, it is only fair to advise the Virginia Bar that, upon investigation, the allegations cited in this paragraph, *inter alia*, constitutes intent to deceive the USPTO, the European Patent Office ("EPO"), and the Japanese Patent Office ("JPO").

F. Respondent's Lack of Understanding of the Term "Burying⁷."

In this instance, Respondent admits to having no knowledge of the term "burying" when referencing patent applications originally filed by Joao under the direction of Rubenstein, but at the same time denies any and all of the Company's charges of the knowing, willful, and with malice "burying" of the Company's inventions, and the Company finds itself asking "Is this a non-denial denial by Respondent," and answers itself by stating "No, but only when Respondent attempts, yet again, to mislead the Virginia Bar by his supposed lack of understanding of the term "burying" when referencing patent applications."

Moreover, following upon this seemingly non-denial denial, and for Respondent's benefit, the Company turns to the URL at <http://www.onelook.com/> and selects the Merriam-Webster's Online Dictionary, 10th Edition's definition of "burying" finding, *inter alia*:

- 1 to dispose of; and
- 2 to conceal; and
- 3 to cover from view.

⁷ Supra Note 1 at 5.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 16

More specifically, example of burying the patent would be whereby Respondent directs Boehm and Becker to file patents with wrong or sparing information in the Company patents so as to prevent their issuance⁸, while writing patents into Utley without knowledge, consent, or authorization of the Company and fails to disclose these patents to the Company until after the fact, further after being caught with this other set of patents, Foley is ordered to carbon copy Company inventors and Bernstein and yet we find them filing these patents without a single acknowledgement of anyone but Utley who stood to prosper from such. Moreover, had this series of events continued, patent applications for inventions such as digital zoom and pan systems on a digital camera would be in the sole possession of Utley; circa 1998, the time period of this invention, there was no other effective way of zooming on a digital image, let alone panning, without significant distortion for the viewer.

Consequently, when Respondent's non-denial denial of the term "burying" when referenced to patent applications, Respondent's argument is a feint that constitutes the sixth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar.

G. Respondent's Reference to the Company's New York Bar Complaints against Kenneth Rubenstein and Raymond A. Joao as "dismissed."⁹

Here, Respondent again attempts to mislead the Virginia Bar by reciting the status, and incorrectly I might add, of the Company's New York bar complaints against individuals, that bear not one scintilla of relevance to the Company's Complaint against Respondent.

Nevertheless, to set the record straight, and for Respondent's information, the above referenced bar complaints have NOT been dismissed, but were temporarily deferred pending the outcome of the Florida State Litigation, and since the final adjudication of the Florida State Litigation where no trial of the matters contained herein ever occurred, the Company has requested the reinstatement of the above referenced bar complaints with the New York bar and have resubmitted same for investigation which is currently under way.

Consequently, when Respondent knowingly and willfully recites misinformation concerning the status of the above referenced bar complaints, Respondent's argument is a

⁸ 35 U.S.C. § 112 requires both that the applicant discloses to one skilled in the art how to make and how to use the claimed invention.

⁹ Supra Note 1 at 17.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
 March 22, 2004
 Page 17

material falsehood that, while it constitutes the seventh of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar, factually should make the Virginia Bar stand up and take notice of what material falsehood one of its members, in Respondent, would bring forth in a matter as serious as the Complaint.

H. Respondent's Reference to the Company's Florida Bar Complaints against Christopher C. Wheeler as "dismissed."¹⁰

In this respect, Respondent again attempts to mislead the Virginia Bar by reciting the status, and incorrectly again I might add, of the Company's Florida Bar complaint against an individual, that bears not one iota of relevance to the Company's Complaint against Respondent. The Florida Bar has never formerly investigated the case and therefore the Florida Bar cannot make an opinion in favor of either party at this time.

Still further, and as of January 2004, the complaint stands before the Chairperson of the Grievance Committee of The Florida Bar, and the Company fully expects the opening of an investigation, and that Wheeler shall receives discipline, whether by admonishment, reprimand, suspension, resignation, or disbarment.

Consequently, when Respondent knowingly and willfully recites misinformation concerning the status of the above referenced bar complaint, Respondent's argument is a material falsehood that, while it constitutes the eighth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar, factually should make the Virginia Bar stand up and take notice of what material falsehood one of its members, in Respondent, would bring forth in a matter as serious as the Complaint.

I. Respondent's Reference to the Denial of the Company's Counterclaim in the Florida State Litigation and Subsequent Proceedings Going to Trial¹¹.

Here, Respondent again attempts to mislead the Virginia Bar by intentionally misconstruing the ruling on the Company's motion to assert a counterclaim for damages, whereby said counterclaim was denied, **not heard**, but for the singular reason of the amount of time between February 2002 to January 2003 that the Company's counsel, Steven M. Selz, Esq., took to review what amounts to tens of thousands of pages of evidence procured from a variety of sources and build the counterclaim.

¹⁰ Ibid.

¹¹ Ibid.

Noel D. Sengel
 March 22, 2004
 Page 18

Secondly, the proceedings **did not go to trial**, but resulted in a default judgment against the Company for failure to *timely* retain replacement counsel for what had begun as a simple billing dispute to circumstances of grand proportions. Moreover, this feint when combined with the bar complaint misinformation, is intended to lead the Virginia Bar to think that a trial was held where the allegations were tried and that the Company lost after a trial, and after all the allegations of the counterclaim were heard and tried. Respondent then attempts to link the outcome of this case with the false statements he makes about the Bar complaints to give the impression that the respective State Bars have decided in favor of the respective respondents, where again it is implied that the respective State Bars had reviewed the facts of the case in an investigation and similarly concluded with the results of the trial to vindicate the various respondents.

Consequently, when Respondent knowingly and willfully recites misinformation concerning the final adjudication of the above referenced case, Respondent's argument is a material falsehood that, while it constitutes the ninth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar, factually should make the Virginia Bar stand up and take notice of what material falsehood one of its members, in Respondent, would bring forth in a matter as serious as the Complaint.

LASTLY, FOR THE CONVENIENCE OF THE VIRGINIA BAR, THE COMPANY ATTACHES THE COUNTERCLAIM HEREIN AS EXHIBIT D, BUT UNLIKE THE COUNTERCLAIM, THE COMPANY'S ONLY GOAL WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY THE CIVIL ACTIONS OF THE COUNTERCLAIM THROUGH THE MECHANISM OF THE VIRGINIA BAR.

J. Respondent's Reference to all the Company's Bar Complaints Being Dismissed¹².

See paragraphs G to I above.

K. Respondent's Reference to the Unpaid Legal Bills of Foley & Lardner LLP ("Foley").

In this respect, Respondent again attempts to mislead the Virginia Bar by recalling the past due payables of the Company from the professional misconducts of Respondent, Boehm, and Becker of Foley. Moreover, the Company accounts for those payables on its

¹² Ibid.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 19

general ledger as long-term accounts payable that at the resolution of the facts of the counterclaim in the Florida State Litigation in any court of competent jurisdiction at the Federal or State level, the Company is highly confident that those payables shall be reduced to nil upon the final adjudication or settlement of any claims according to the counterclaim in the Florida State Litigation; the Company notes with interest that, suddenly, Foley through Respondent claims that they have an unpaid bill, and without one telephone call or one letter asking for payment, but now in response to the Complaint the Company finds itself threatened with litigation, perhaps another attempt at cloak the professional misconducts of Respondent.

Consequently, when Respondent rolls to the right and hopes that the Virginia Bar looks to the left on this issue, Respondent's argument is feint that constitutes the eleventh of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar.

L. Hearsay Statements of P. Stephen Lamont

In this instance, Respondent points to the signature of P. Stephen Lamont, the duly appointed Chief Executive Officer of the Company since December 3, 2001 ("CEO Lamont"), who executes the Complaint along with Eliot I. Bernstein, the Company's Founder & President, whereby Mr. Lamont's participation has not relied upon the statements of Mr. Bernstein, but, rather relies upon his review, along with Selz and Rogers, Esq., of the tens of thousands of pages of documents which include patent documents, teleconference transcripts, and taped conversations surrounding the circumstances of the Complaint, and the documentation of which, in part, the Company submits as conclusive evidence of professional misconducts in Section III below.

Consequently, when Respondent's charges that by virtue of Mr. Lamont's signature on the Complaint, he has benefited by the hearsay statements of Mr. Bernstein, despite Mr. Lamont's review of tens of thousands of pages of documentation that include, but are not limited to patent documents, teleconference transcripts, and taped conversations, Respondent's argument is a feint that constitutes the twelfth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar. Additionally, the initial complaint was co-signed by Mr. Bernstein and duly noted by Noel Sengel of the Virginia Bar.

M. Respondent made no legal decisions concerning Iviewit¹³.

¹³ Supra Note 1 at 3

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 20

In this respect, the Company points to Respondent's own statements that he did the initial legal work, made the decision to assign the day-to-day duties to Boehm and Becker, under his supervision, and billed for various services as the lead on the Company's account. Moreover, Utley points to Respondent as a world renowned patent expert from IBM, and it is this status the Company sought and secured for its patent prosecution process, but like any other engagement, the Company must accept the junior patent attorneys of Boehm and Becker, in handling the more mundane day to day duties under the supervision of Respondent, all documentation attached herein as Exhibit E. Moreover, as exhibited in the letters from Alan Epstein, Esq. of Hirsch Jackoway Tyerman Wertheimer Austen Mandelbaum & Morris, letters reviewed and approved by Utley, it is Respondent who is headlined for investors as the person in charge of the Company's account; all investors and the Board of Directors were reliant on Respondent leadership and supervision of the filings, and where the experience of subordinate attorneys such as Boehm and Becker, the Florida based Company did not need to travel to Wisconsin to secure, but could have done so in its own backyard. As shown by Exhibit E, all decisions were made by Respondent with Utley and their past history at DTE points to a pattern of invention misappropriation that can only be cloaked where Respondent hides behind his subordinate attorneys, whom he admittedly mentors and teaches, but "mentors and teaches what?", asks the Company.

Further, Dick states to the Virginia Bar that he was not involved with Wachovia Securities and inducing them, with others into working with Iviewit and yet as is illustrated from the billing entries for Mr. Dick he was present at several of the key meetings with Wachovia Securities and Maurice Buchsbaum (representative of Crossbow Ventures the Companies lead investor) wherein it is apparent that it was Mr. Dick whom everyone turned to in regard to Iviewit patent matters and certainly not his underlings. Mr. Dick at these meetings made the major representations regarding Iviewit and the patent filings.

Consequently, when Respondent knowingly and willfully claims to have made no legal decisions when viewing the documentation of Exhibit E, Respondent's argument is a material falsehood that, while it constitutes the thirteenth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar, factually should make the Virginia Bar stand up and take notice of what material falsehood one of its members, in Respondent, would bring forth in a matter as serious as the Complaint.

N. Respondent has no knowledge of lapses by Joao¹⁴.

¹⁴ Supra Note 1 at 5.

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 21

In this instance, the reasons for the engagement of Respondent, through the introduction by Utley and Wheeler, was a result of the missteps by Joao, wherein Respondent was engaged to calm the outcries of investors, and throughout that period, in supervision of Boehm and Becker, the discussions surround correcting Joao's work, identifying problems in Joao's patent applications, as Respondent was monitoring work according to the teleconference transcripts and letters attached herein as Exhibit F. These conversations took place after Utley was found with two sets of patent book and whereby the Company found patents fraught with errors and incorrect inventors and fragments of what appeared to be evidence indicating that Utley was patenting concepts in his own name learned in the Iviewit lab and invented by others and not disclosing his intentions to anyone. Prior to these taped transcribed meetings contained herein Bernstein found Foley taping meetings in which they were asking many strange questions regarding the patents and the inventorship, trying to have Bernstein agree to Utley as an inventor and all after months of knowing and having met with the inventors in an attempt to cover up what had occurred. When Bernstein asked if they were taping the call Foley's patent group replied that indeed they were. After Bernstein advised Board members of this, it was determined that Bernstein would tape all subsequent meetings. Bernstein was outraged at the attempt to have him answer questions while taping him without his knowledge and stated that no tapes without his authorization should be done again and that all prior tapes be destroyed.

Moreover, a series of taped meetings transpired wherein the discussion, the first centered around many of the problems with Joao's initial patent filings, Respondent was then charged with correcting the errors of Joao's filings through his orders to his underlings and was to investigate and report Joao for the errors while the underlings corrected them. None of the changes were completed, including assigning the patents to Company that prior had been claimed to be assigned by Foley and in the transcript it is clear that the Board members were very concerned about investor fraud, including fraud upon the seed investor Wayne Huizenga. Further, Foley states that Joao's work is so off base that they would need to completely re-write a new patent and that the Company would have some risks. As Board members become very concerned it then was decided that Foley would go back and amend the Joao work to save the original filing date but that because Joao failed to patent key elements the patent office could reject the work as new matter therefore causing loss of the invention. Even in the new filing they filed the Company is at the same risk of rejection and now stands with more problems than when they took over. After the meetings Dick and his team are charged with making the inventor changes and content changes and reporting Joao for his errors.

From the Company's recent work with the patent office to correct these errors caused by Respondent which are still wrong as of this date, we find that the process whereby

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 22

inventors were left off applications with intent to deceive which is what the Company claimed to Foley regarding Joao's work, would have taken a petition to the Commissioner of Patent & Trademarks stating fraud upon the United States Patent and Trademark Office. All changes to inventors from the Joao filings to the Foley filings would have had to undergone this procedure of petitioning the commissioner and therefore we ask how could these changes have been made by Foley without this process. Finally, the changes to inventors even if done without claiming fraud upon the USPTO would have had to written statements filed by each inventor approving of the inventor changes and certain forms would have had to be filed in this regard, the Company has no record of these, nor are they in any copies of any law firms files.

The assignments that were to be filed on Joao's filings were not made and Foley claims they were filed to Virginia Bar but have no files to verify their claim. The reason they have no copies of these is that they remain today not filed. Furthermore, several of the new filings Foley made are still unassigned. The fact that Foley lawyers state in the transcripts that they are completing the assignments that week, although the Company had been prior told they were filed, Foley still never filed them and they remain unassigned as of this date. Again, this is in response to the issue of fraud raised in the transcripts committed upon the shareholders of Iviewit if they were not filed and the lack of filing them indicates that fraud indeed has been committed upon the shareholders of Iviewit. Maurice Buchsbaum, an agent for Crossbow Ventures and Simon Bernstein then (Chairman of the Board), brought up the question of fraud. Mr. Wheeler was charged with answering the question and reporting back to the Company, which he failed to ever do.

Consequently, when Respondent claims to have no knowledge of the lapses by Joao, and when viewing the documentation of Exhibit F, Respondent's argument is a material falsehood that, while it constitutes the fourteenth of Respondent's numerous attempts at insults to the intelligences of the Virginia Bar, factually should make the Virginia Bar stand up and take notice of what material falsehood one of its members, in Respondent, would bring forth in a matter as serious as the Complaint.

III. SPECIFIC RULES VIOLATIONS AND EVIDENCE THERE TO

DISCLAIMER: Throughout this Section III, the Company does not attest to the validity of any documents as the Company cannot source original documents that have been lost by past patent counsels and, further, that it is the Company's

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel

Page 23

contention that many of such documents may be fraudulent representations of the originals in an effort by past patent counsels to cloak the professional misconducts enumerated herein.

For ease of reference and to pictorially frame for the Virginia Bar the specific rules violations, the Company references the intellectual property docket ("IP Docket") attached herein as Exhibit G, constructed from the dockets of past patent counsel, and continually cited by the Company in this Section III.

A. RULE 1.8 (b) Conflict of Interest: Prohibited Transactions.

That Respondent used information relating to the representation of the Company, for the advantage of Respondent and a third party, and to the disadvantage of the Company by knowingly, willfully, and with malice, transferring patents using Boehm, Becker, and Foley so as to name Utley as the sole holder of multiple patents in his individual name and capacity when in fact they were and arose from the technologies developed by Bernstein and others and held by the Company prior to Utley's employment with the Company.

That Utley confronted Mr. Bernstein, on the night before filings were due at the USPTO, to sign blank signature pages for patent applications, contrary to the assertion of Respondent that inventors had time to review or correct applications¹⁵. Moreover, when Mr. Bernstein demanded to review the patent applications, Utley refused, forcing Mr. Bernstein and another employee, James F. Armstrong ("Armstrong") a resident of Fair Haven, N.J. with a telephone number of 732-747-4353, to seize the patent books from Utley who became irate, and wherein Mr. Bernstein and his assistant, Jennifer Kluge, photocopied the two sets of books.

Moreover, what Mr. Bernstein and Armstrong then discovered was: (i) patent applications in one book did not match at all the patent applications in the other book and that in one book, the inventors were all changed and incorrect and the content was not describing to one skilled in the art how to make and use the invention;¹⁶ (ii) fragmented evidence of patent materials indicating that Utley might be filing other patents as his own that the Company had never been aware of; and, (iii) later, what Respondent ended up filing is completely different than what the inventors changed and signed for. After meetings in which the errors are addressed and corrected Foley still files incorrect filings leaving the Company to hire counsel to fix the mistakes at further expense to the

¹⁵ Supra Note 1 at 7.

¹⁶ Thus failing the "enablement" requirement of 35 U.S.C. §112, resulting in a failed patent application

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 24

Company as Foley billed for these mistakes. Further, after all this was exposed they began an assault on Bernstein that lingers in the response of Dick submitted, as well as, a host of letters and calls insinuating that he was not a good inventor or a wildcard, Bernstein has felt slandered by such insults.

That Respondent, Utley, Wheeler, Rubenstein, Joao, Foley, and Proskauer with such intent, directed that certain patent rights be put in the name of Utley (indicating future benefits to Respondent) and/or that such patent rights were modified or negligently pursued so as to fail to provide protection of the intellectual property, resulting in the ability of other clients of Respondent, Wheeler, Rubenstein, Joao, and Proskauer to make use of such technologies without being liable to the Company for royalties normally arising from such use as described in the specific patent applications below, and attached herein as Exhibit H. All information in the patent documents contained herein is second hand information as our former patent counsel has now lost the Company's original files. We had informed our former counsel that we needed them for many of the Federal and State complaints now filed, including the Virginia Bar and they claim to have sent them with no receipts or verification that they were received and the Company. The Company is now preparing yet another attorney complaint for this. Therefore, the records the Company maintains of the patents are missing filing stamps for verification and we await the help of the USPTO who is working overtime to help the Company get its patents suspended while these matters can finally after years of attorneys failing to report other attorneys and thereby neglecting to fix the patents so as to not expose their brethren is finally about to come undone and the wrongs may get righted. We are currently in the process of securing a set of documents for verification from the USPTO and per the Virginia Bars direction we are submitting the complaint with the documents in the Company's possession yet we attest not to the validity of any of them. In speaking with the Virginia Bar we were requested upon asking for an extension to send them in without verification as the Virginia Bar was in a hurry to begin work on this matter and the Company was informed that we would be able to supplement the complaint as this additional information is gathered:

1. Provisional Patent Application 60/233,341

Areas of Professional Misconduct

- An invention of learned in the Iviewit labs is written and filed in the singular name of Utley at the direction of Respondent; and
- The invention, according to the IP Docket of Exhibit G, provides for no assignment to the Company, and contrary to the representations of Respondent to

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Company investors. The inclusion of this patent in the portfolio that the Company has no rights, title or interests in, is again a fraud upon the shareholders and investors of Iviewit, as well as, the Virginia Bar as it is included in Dick's response; and

- As this patent application does not appear in the Foley docket from which, in part, Exhibit G, was constructed until after Utley was terminated for cause and Respondent was discharged; the Company states this patent application was one contained in a second set of patent books at the direction of Respondent; and
- The Company and its Counsel have an incomplete record of this filing, missing virtually all filing information and no signatures or verification of any of the information regarding this application. The Company is waiting for information from the USPTO who has informed the Company that they may have to sue Utley under his employment contract to get them returned to Iviewit, as, while listed on the Company's IP Docket, the Company presently has no right, title, or interest, in this application; and
- Despite repeated requests throughout the transcripts Exhibit F to have the Company notified and copied on any correspondences regarding the patents, including copies to Bernstein, Foley fails to copy anyone but Mr. Utley regarding these filings and it is the contention of the Company that these letters were created after the fact; and
- The listing of this patent on the portfolio also constitutes shareholder fraud.
- Finally, this patent work for Utley then gets included in Iviewit's billings, and it is the Companies contention that this occurred only after Utley was caught with his second set of filings. As a means to cover up, they later went back and changed the billing records, yet it appears unethical to bill a Company for a patent they do not own.

2. Provisional Patent Application 60/233,344

Areas of Professional Misconduct

- An invention of Bernstein, Zakirul Shirajee ("Shirajee"), and Jude Rosario ("Rosario") is written and filed, on information and belief, in the singular name of Utley at the direction of Respondent; and
- The invention, according to the IP Docket of Exhibit G, provides for no assignment to the Company, and contrary to the representations of Respondent to Company investors. The inclusion of this patent in the portfolio that the

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Company has no rights, title or interests in, is again a fraud upon the shareholders and investors of Iviewit; and

- An invention of Bernstein, Shirajee, and Rosario fails to list them as inventors; and
- As this patent application does not appear in the Foley docket from which, in part, Exhibit G, was constructed until after Utley was terminated for cause and Respondent was discharged; the Company states this patent application was one contained in a second set of patent books at the direction of Respondent; and
- The Company and its Counsel have an incomplete record of this filing, missing virtually all filing information and no signatures or verification of any of the information regarding this application. The Company is waiting for information from the USPTO who has informed the Company that they may have to sue Utley under his employment contract to get them returned to Iviewit, as, while listed on the Company's IP Docket, the Company presently has no right, title, or interest, in this application according to the invention of Bernstein, Shirajee, and Rosario; and
- Despite repeated requests throughout the transcripts Exhibit F to have the Company notified and copied on any correspondences regarding the patents, including copies to Bernstein, Foley fails to copy anyone but Mr. Utley regarding these filings and it is the contention of the Company that these letters were created after the fact; and
- Although Foley & Lardner claims this patent was invented by Utley and Bernstein, both the USPTO and counsel BSZT & Greenberg Traurig have verified that Mr. Bernstein is not listed as an inventor; and
- Finally, this patent work for Utley then gets included in Iviewit's billings, and it is the Companies contention that this occurred only after Utley was caught with his second set of filings. As a means to cover up, they later went back and changed the billing records, yet it appears unethical to bill a Company for a patent they do not own.

3. Non-Provisional Patent Application 09/630,939

Areas of Professional Misconduct

- An invention of Bernstein, Zakirul Shirajee ("Shirajee"), and Jude Rosario ("Rosario") is written and filed in the name of Utley and Bernstein at the direction of Respondent; and

- The invention, according to the IP Docket of Exhibit G, has no assignment to the Company, and contrary to the representations of Respondent to Company investors. Foley states in the transcripts that assignments have been filed and no assignment as of this date is on file with the USPTO; and
- A BLANK Power of Attorney is submitted to the patent office and five months later Foley secures a supposed signature of Bernstein & Utley, although Bernstein never saw an application for this and claims his signature on the Power of Attorney and Declaration and Oath were switched. Either way, one year later the Oath and Declaration are still missing from the patent office and BSZT then has to file it again and they amazingly file one for Utley and Bernstein.
- An invention of Bernstein, Shirajee, and Rosario fails to list them as inventors; and
- As this patent application does not appear in the Foley docket from which, in part, Exhibit G, was constructed until after Utley was terminated for cause and Respondent was discharged; the Company states this patent application was one contained in a second set of patent books at the direction of Respondent; and
- The Company and its Counsel have an incomplete record of this filing, missing virtually all filing information and no original signatures or verification of any of the information regarding this application.; and
- Despite repeated requests throughout the transcripts Exhibit F to have the Company notified and copied on any correspondences regarding the patents, including copies to Bernstein, Foley fails to copy anyone but Mr. Utley regarding these filings and it is the contention of the Company that these letters were created after the fact; and
- Finally, this patent work for Utley then gets included in Iviewit's billings, and it is the Companies contention that this occurred only after Utley was caught with his second set of filings. As a means to cover up, they later went back and changed the billing records, yet it appears unethical to bill a Company for a patent they do not own.

4. PCT Patent Application US00/15602

That Respondent, through the Declaration of Becker in an attached exhibit from Grossman, claims "There is no file for Foley & Lardner 57103/117. This number was skipped in our numbering sequence¹⁷." Yet, Respondent submits, through the Declaration of Becker in an attached exhibit addressed to Utley with a carbon copy to Boehm, the

¹⁷ Supra Note 1 at 34

Noel D. Sengel
March 22, 2004
Page 28

existence of a Foley “Our Ref.: 57103/117¹⁸,” the Company maintains that Mr. Bernstein and Friedstein saw the 117 filing with the *bona fide* inventors and this file 117 was replaced by Foley docket no. 118 naming Utley as an inventor, the day before filing. It would appear highly unusual that the inventors would change after months of work, the day before the filing and that applications would be thrown out and portfolio numbers such as 117, that were billed for would disappear instead of being corrected on the docket. In all drafts reviewed by inventors Friedstein and Bernstein, of either 117 or 118 there is no Utley listed as an inventor on the application and only on the filed document the next day does Utley’s signature appear. This file was not maintained in the Company files and was only found when files were transferred from Foley, after Utley was caught with two sets of patent books. Foley claims that on the day before filing 117 after drafting the application that it was Bernstein whom cancelled the application in one of the letters the Company cannot attest to the validity of. As mentioned, the Company found that Foley and Utley were taping conversations in which they were trying to couch the inventors into statements regarding the inventors. Once the Company found out they were taping we requested that no tapes be made without all parties agreeing and asked them to destroy any such recordings. These tapes are what led to the Company taping all further calls at the direction of several Board members so as to protect the Company. In fact, in the taped calls that are exhibited herein, Foley is made to explain what would allow Utley to be on any applications and continuously state that he should not be on any applications whatsoever in the event that any previous unauthorized taping is exhibited as any defense of any actions they may have taken.

One must understand that finding Mr. Utley with a second set of “cooked” patent books led the Company to take very calculated steps, such as playing along to find out more information while we ascertained the scope of the problems that confronted the shareholders. Several letters drafted by Foley, all indicate them trying to change these inventors the day before filing, letters the Company cannot attest to the validity of, other than as attempts to cover up for these malfeasances after the fact. Further, the letters try and indicate that these changes were approved, yet it would have taken more than verbal approval according to the patent procedures to change inventors, such as filing forms with all inventors agreeing to such changes in writing or declaring intent to deceive regarding the provisional filings to have any new inventors added to the non-provisional filings. Finally, due to the gross neglect of Foley and Respondent in properly correcting the inventors and further trying to add Utley to the patents, the Company has now had to petition the Commissioner directly with the USPTO.

Areas of Professional Misconduct

¹⁸ Supra Note 1 at 37

THE COMPANY’S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

- Utley in deposition states he invented nothing on this application yet he is listed as an inventor.
- Utley reviews a copy of Foley Docket 118 without him as an inventor and makes no changes.
- An invention of Bernstein and Friedstein before Utley was even at the Company, originates as the Foley file 117, where Respondent fails to file the application with the USPTO, blaming it on conversations with Bernstein. Bernstein requests that all written documentation regarding this decision be procured by the Virginia Bar to ascertain this claim. In all drafts reviewed by inventors Friedstein and Bernstein, of either 117 or 118 there is no Utley listed as an inventor on the application and only on the filed document does Utley's signature appear. This file was not maintained in the Company files and was only found when files were transferred from Foley, after Utley was caught with two sets of patent books.
- An invention of Bernstein and Friedstein is written and filed in the names of Bernstein, Friedstein and Utley at the direction of Respondent. Inventors Friedstein and Bernstein review 117 and then the very next day, upon filing the inventors change to Friedstein, Bernstein and Utley and the docket 117 is lost and is replaced with 118.
- A US filing is missed and may be unrecoverable
- Utley's employment contract is submitted to remove him from the patent

5. Non-Provisional Patent Application 09/587,734

Areas of Professional Misconduct

- An invention of Bernstein, Shirajee, and Rosario is written and filed in the names of Bernstein, Rosario, and Utley at the direction of Respondent; and
- Application is made with blank power of attorneys for Bernstein, Rosario and Utley; and
- Utley signs and executes as an inventor knowing that he was not and Respondent submitted it.

6. PCT Patent Application US00/15406

Areas of Professional Misconduct

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
 March 22, 2004
 Page 30

- An invention of Bernstein, Shirajee, and Rosario is written and filed in the names of Bernstein and Shirajee (or just Bernstein as the Company awaits information) at the direction of Respondent; and
- As this patent application does not appear in the Foley docket from which, in part, Exhibit G, was constructed until after Utley was terminated for cause and Respondent was discharged; the Company states this patent application was one contained in a second set of patent books at the direction of Respondent..
- Filed without inventor signatures on Oath and Declaration

The remaining patents are shown with evidence to the misconduct committed after these have been illustrated, we will update the Virginia Bar on these shortly.

To the best of my knowledge I, Eliot I. Bernstein, have not invented anything with Brian Utley. I can attest that I know that Shirajee, Rosario and Friedstein have never invented anything with Brian Utley. In any instance where Brian Utley is an inventor a fraud upon the USPTO has been committed by Dick and Utley, the other attorneys were merely casualties of their behavior who were "just following orders." Dick was fully apprised of the problems with the Joao and Rubenstein filings, he was the person in charge of fixing everything, any attempt at a mentor to hide behind his underlings is ridiculous, he must be held accountable for all errors. Letting him cloak behind his juniors would be similar to saying that Osama Bin Laden is not guilty for the World Trade Center because he just gave the orders and did not pilot the plane.

What the inventor's saw and what was filed is materially different and Dick and Utley were reviewing all applications. I have met Dick several times and he was the person that every investor relied on in charge of overseeing the patents and what they now have to show for his work is a travesty. The cost of repair is an unknown at this point because of Respondent and the inventions may be lost. Certainly the Virginia Bar must see a pattern here that has cost two companies their fortunes and must revoke Dick's license immediately to prevent further instances of damage to the trusting public.

B. RULE 3.3 Candor Towards the Tribunal.

That Respondent, in his representation of the Company, *inter alia*, has made a false statement of fact and law to a tribunal, and failed to disclose a fact to a tribunal when disclosure is necessary to a criminal or fraudulent act, and has offered documentations that the lawyer knows to be false, or has offered documentations that the lawyer comes to know as being false and fails to take remedial measures whereby Respondent had

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel

Page 31

knowledge that Mr. Bernstein and several members of the Company's board of directors ("Board") members were not content with the provisional filings of Joao.

More specifically, and as background to the Joao deficiencies, the Company did not seek simple verbal assurances, but wanted a review of the patents applications, akin to the 1999 review of the patent applications by a one Steven Filipek, Esq, engaged for that specific purpose by the Company's seed investor, an affiliate of Wayne Huizenga, of Blockbuster and Waste Management fame. Furthermore, during the Joao engagement, the invention description of the patents seemed altered, and, factually, Joao did alter the invention descriptions before being filed with the USPTO, instances of which Respondent was apprised.

That Respondent knowingly, willfully, and with malice, transferred patents using Foley so as to name Utley as the sole holder of multiple patents in his individual name and capacity when in fact they were and arose from the technologies developed by Bernstein and others and held by the Company prior to Utley's employment with the Company

That Respondent, knowingly, willfully, and with malice fails to list proper inventors of the technologies, resulting in the failure of the patents to include their rightful and lawful inventors.

That Respondent, knowingly, willfully, and with malice changed the titles of patent applications so as to limit their scope and the claims they stake.

That Respondent knowingly, willfully, and with malice failed to file copyrights for the source code linking the Company's inventions.

That Respondent, Utley, Wheeler, Rubenstein, Joao, Foley, and Proskauer with such intent, directed that certain patent rights be put in the name of Utley (indicating future benefits to Respondent) and/or that such patent rights were modified or negligently pursued so as to fail to provide protection of the intellectual property, resulting in the ability of other clients of Respondent, Wheeler, Rubenstein, Joao, and Proskauer to make use of such technologies without being liable to the Company for royalties normally arising from such as described in the specific patent applications below, and attached herein as Exhibit I:

- 1. PCT Patent Application US00/15408**
Refer to CD ROM exhibit

- 2. Non-Provisional Patent Application 09/522,721**
Refer to CD ROM Exhibit

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

 Page 32

See also Section III, paragraph A, subparagraphs 1, 2, 3, 4, 5, and 6 above.

C. RULE 1.6 (c) (3) Confidentiality of Information (Reporting Misconduct of Another Attorney).

That Respondent had information concerning the misconduct of another attorney and did not reveal that information to the appropriate professional authority, upon the discovery of the "lapses" by Joao, that caused Wheeler and Proskauer to refer the patent matters to Respondent who equally becomes aware of such "lapses" (where lapses as referenced herein are termed knowing, willful, and with malice burying of the Company's inventions in patent applications) as described in the specific patent applications below, and attached herein as Exhibit J:

1. Non-Provisional Patent Application 09/630,939

Areas of Professional Misconduct

- That the predecessor Non-Provisional Patent Application 09/522,721 of Joao when considering the knowing, willful, and with malice burying of the Company's inventions, Respondent should have reported the misconduct of Joao; and
- That if preparing and filing this patent application, Respondent, Boehm, and Becker should have consulted the *bona fide* inventors; and
- An invention of Bernstein, Shirajee, and Rosario is written and filed in the names of Bernstein and Utley at the direction of Respondent; and
- The invention, according to the IP Docket of Exhibit G, provides for no assignment to the Company, and contrary to the representations of Respondent to Company investors; and
- An invention of Bernstein, Shirajee, and Rosario fails to list Shirajee and Rosario as inventors.

D. RULE 8.3 Reporting Misconduct

That Respondent had reliable information that another lawyer has committed a violation of the rules of professional conduct that raises a substantial question as to that lawyer's honesty, trustworthiness, or fitness to practice law and failed to inform the appropriate professional authority, as a result of the discovery of the "lapses" by Joao, where Respondent equally becomes aware of such "lapses" (where lapses as referenced herein

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

are termed knowing, willful, and with malice burying of the Company's inventions in patent applications), as described in the specific patent applications below, and attached herein as Exhibit J (See Section III, paragraph C, subparagraph 1):

E. RULE 1.16 (e) Delivery of Former Client's File

That Respondent shall return all original, client-furnished documents and any originals of legal instruments upon termination of representation, but that Respondent knowingly, willfully, and with malice destroyed Company documents to insert reasonable doubt as to the above allegations, and failed to ensure their proper transfer to new patent counsel.

That, the Company maintains, Respondent and the subordinate attorneys, once Mr. Bernstein and Armstrong discovered the second set of patent books, began to falsify their billings records, to insert reasonable doubt as to the above allegations, as described in the specific patent applications below, and attached herein as Exhibit K:

1. PCT Patent Application US00/15602

Areas of Professional Misconduct

Contained on CD ROM with evidence

F. RULE 1.8 (c) Conflict of Interest: Prohibited Transactions

That a lawyer shall not prepare an instrument giving the lawyer a substantial benefit in representation of a client, wherein Respondent, Utley, Wheeler, Rubenstein, Joao, Foley, and Proskauer with such intent, directed that certain patent rights be put in the name of Utley (indicating future benefits to Respondent) and/or that such patent rights were modified or negligently pursued so as to fail to provide protection of the intellectual property, resulting in the ability of other clients of Respondent, Wheeler, Rubenstein, Joao, and Proskauer to make use of such technologies without being liable to the Company for royalties normally arising from such use (See Section III, paragraph A, subparagraphs 1,2,3,4,5, and 6.

IV. Conclusion

A. Declaration of Brian G. Utley

THE COMPANY'S END WITH RESPECT TO THE COMPLAINT IS CHARGING THE RESPONDENT WITH THE PROFESSIONAL MISCONDUCTS CITED HEREIN, AND NOT AS A MEANS TO TRY ANY CIVIL, CRIMINAL, OR PATENT RULE VIOLATIONS THROUGH THE MECHANISM OF THE VIRGINIA BAR.

Noel D. Sengel
March 22, 2004
Page 34

As to the declaration of Utley in support of Respondent, the Company references an electronic mail message from William R. Kasser, a former accounting consultant of the Company to Mr. Bernstein attached herein as Exhibit L.

In the electronic mail message sent by Mr. Kasser to Eliot Bernstein on April 23, 2002, Mr. Kasser, as a result of an account reconciliation, alleges gross fraud in the booking of Company revenues by Utley and a one Raymond T. Hersch, former Chief Financial Officer of the Company.

Thus, and combined with the misrepresentations of Utley as to the circumstances surrounding the intellectual property of DTE and the circumstances surrounding the distorted resume of Utley and the patent application in the singular name of Utley and the Boca Raton, Fla. Police Department report surrounding the theft of the Company's proprietary equipment by Utley and the inconsistencies in his deposition in the Florida State Litigation, as to the reliance in any of Respondent's filings, and/or proceedings in this matter on the testimony of Utley that would seemingly exculpate Respondent, it should be clear to the Virginia Bar that the testimony of Utley is utterly worthless.

B. Declaration of Douglas A. Boehm

As to the Declaration of Boehm, that Boehm, through the Declaration of Becker in an attached exhibit from Grossman, claims "There is no file for Foley & Lardner 57103/117. This number was skipped in our numbering sequence¹⁹." Yet, Respondent submits, through the Declaration of Becker in an attached exhibit addressed to Utley with a carbon copy to Boehm, the existence of a Foley "Our Ref.: 57103/117²⁰;" the Company maintains that Mr. Bernstein and Friedstein saw the 117 filing with the *bona fide* inventors and this file 117 was replaced by Foley docket no. 118 naming Utley as an inventor.

Thus, as to the reliance in any of Respondent's filings, and/or proceedings in this matter on the testimony of Boehm that would seemingly exculpate Respondent, it should be clear to the Virginia Bar that the testimony of Boehm is utterly worthless.

C. Declaration of Steven C. Becker

As to the Declaration of Becker, that Becker, through his Declaration in an attached exhibit from Grossman, claims "There is no file for Foley & Lardner 57103/117. This

¹⁹ Supra Note 1 at 34.

²⁰ Supra Note 1 at 37.

Noel D. Sengel
March 22, 2004
Page 35

number was skipped in our numbering sequence²¹.” Yet, Respondent submits, through the Declaration of Becker in an attached exhibit addressed to Utley with a carbon copy to Boehm, the existence of a Foley “Our Ref.: 57103/117²²,” the Company maintains that Mr. Bernstein and Friedstein saw and reviewed the 117 filing with the *bona fide* inventors and this file 117 was replaced by Foley docket no. 118 naming Utley as an inventor.

Thus, as to the reliance in any of Respondent's filings, and/or proceedings in this matter on the testimony of Becker that would seemingly exculpate Respondent, it should be clear to the Virginia Bar that the testimony of Becker is utterly worthless.

D. Declaration of Barry L. Grossman

As to the Declaration of Grossman, that Grossman, through the Declaration of Becker in an attached exhibit from Grossman, claims “There is no file for Foley & Lardner 57103/117. This number was skipped in our numbering sequence²³.” Yet, Respondent submits, through the Declaration of Becker in an attached exhibit addressed to Utley with a carbon copy to Boehm, the existence of a Foley “Our Ref.: 57103/117²⁴,” the Company maintains that Mr. Bernstein and Friedstein saw the 117 filing with the *bona fide* inventors and this file 117 was replaced by Foley docket no. 118 naming Utley as an inventor.

Thus, as to the reliance in any of Respondent's filings, and/or proceedings in this matter on the testimony of Grossman that would seemingly exculpate Respondent, it should be clear to the Virginia Bar that the testimony of Grossman is utterly worthless.

v. Testimonials in Support of Company's Complaint

Lastly, in addition to the counterclaim filed in the Florida State Litigation by Selz and the review of documentation by Rogers in supervision of Selz and the review of documentation by CEO Lamont as a basis for the filing of the Complaint along with Mr. Bernstein, in support of the Company's Complaint, we attach as Exhibit M:

Re: **CHANGE OF INVENTOR REQUEST – INTENT TO DECIEVE AND
COMMITT FRAUD UPON THE USPTO IS CLAIMED**

US SERIAL NO. 09 630 939

Dear Commissioner of Patent & Trademarks:

Please let the attached changed of inventors request serve as an official request pursuant Section 37CFR 1.48 to change the inventors. Whereby, intent to commit fraud on the USPTO is the listed reason.

Very truly yours,

A handwritten signature in black ink, appearing to read "E. Bernstein", is written over a horizontal line.

Eliot I Bernstein
President
I View It Holdings, Inc. and any/all affiliates

U.S. Patent and Trademark Office
Commissioner of Patent & Trademarks

Page 2 of 8

CHANGE OF INVENTOR REQUEST
US SERIAL NO. 09 630 939

PURSUANT TO 37CFR 1.48
INTENT TO DECIEVE AND COMMITT FRAUD UPON THE USPTO

I, Eliot I. Bernstein, as acting President of Iviewit and its affiliates, and as a named inventor on this application, hereby request that the true and correct inventors be added and the wrong inventors removed from this Non Provisional application 09 630 939 to properly name the inventors of this invention.

The listed and **incorrect** inventors for this application are:

Eliot I. Bernstein
Brian G. Utley

The **true and correct inventors** for this application are:

Eliot I. Bernstein
Zakirul Shirajee
Jude Rosario

The reason for this correction:

The true and correct inventors have been purposefully been left off this patent application by three different counsels all failing to correctly fix the inventor issues and wrong disclosures. Since the creation of the invention, our initial counsel in the Provisional filing **60 125 824** attorneys Kenneth Rubenstein of Proskauer Rose LLP ("PR") and Raymond Joao of Meltzer, Lippe, Goldstein, Wolf & Schlissel, P.C., ("MLGS") failed after repeated requests to make the inventor and content changes, although they had full knowledge of the correct inventors and the correct invention. In addition, the content of the Provisional application had changed from what the inventors disclosed initially and pertinent disclosures were left out with malice and intent to deceive the USPTO and further deprive the inventors of their inventions. Subsequent counsel to "PR" attorneys William Dick, Douglas Boehm and Steven Becker of Foley & Lardner ("FL") on this Non Provisional filing, created further errors with the inventors and failed to correct either the inventors or the content of the Provisional. This may now leave the pertinent disclosures left off and incorrect inventors, to serve as new matter in the in subsequent

U.S. Patent and Trademark Office
Commissioner of Patent & Trademarks
Thursday, February 12, 2004
Page 3 of 8

Non Provisional filings that claim priority to the Provisional application. Successor counsel to "FL" attorneys Norman Zafman, Thomas Coester and Farzad Amini of Blakely Sokoloff Taylor & Zafman LLP ("BSZT") also failed to file the corrections despite repeated requests by the Company to get the corrections to the patent office.

Initially, attorneys Kenneth Rubenstein of "PR" and Raymond Joao of "MLGS" knowingly, with malice and intent to commit fraud upon the USPTO, left inventors off the Provisional application after obtaining their signatures and disclosures in meetings. Mssrs: Rubenstein and Joao, on the subsequent Non Provisional Filing (09 522 721) and the PCT (00 07772) filings, despite being aware of the prior problems discovered, made no attempt to fix their errors on the Non-Provisional filing. They further continued the errors of their Provisional filing, despite having the inventors sign and fix the new Non-Provisional filings; these changes and signatures were completely discarded by them and again a different application was filed. Mr. Rubenstein, an Advisor to the Board and Shareholder, who under deposition claimed to not know the Company now, had been the first patent attorney to meet with the inventors and receive the disclosures and he represented that he was directing his underling Mr. Joao to do the Provisional filings with his oversight. Raymond Joao was terminated as counsel for this and other patent malfeasances that became uncovered.

To replace "MLGS", "FL" was retained to make corrections to the patents and get the correct inventors listed. Again, it was fully disclosed who the correct inventors were and what the inventions were to each of these attorneys at "FL" for this application and other applications of the Company. After reviewing Mssrs: Joao and Rubenstein's work "FL" found that Raymond Joao had failed to properly list the inventors and left out pertinent disclosures on the filings. Upon finding out about the correct inventors, "FL" attorneys stated that the corrections were being made to the Provisional & Non-Provisional applications. After meeting with and taking disclosures and signatures of the true inventors, "FL" failed to make the corrections knowingly, with malice and intent to further commit fraud on the USPTO in their Provisional, Non-Provisional and PCT applications filed by them. Further, in instances such as this application where Brian G. Utley is a listed inventor, "FL" added inventor Brian G. Utley, knowingly, with malice and intent to further commit fraud upon the USPTO, knowing that he was not an inventor in any material way to the patents and was not even there when they were invented. Finally, in instances such as this filing, true and correct inventors have been partially left off the application and others were replaced by Mr. Utley as a new inventor.

This application is also a replacement of the original patent the Company had filed with Mssrs: Joao and Rubenstein for the original invention in an effort to let the original patent expire and replace it with this application. Yet, amazingly, the application does not get

U.S. Patent and Trademark Office
Commissioner of Patent & Trademarks
Thursday, February 12, 2004
Page 4 of 8

corrected it further gets an entirely new set of inventors, again these inventors are wrong knowingly, with malice and intent to commit fraud on the USPTO. In this Non Provisional application, some of the true and correct inventors were dropped and replaced by Brian G. Utley. Mr. Utley should not be on any applications for the Company, as he has not invented anything.

It will serve to note here that it has come to the attention of the Company after an investigation into Mr. Utley's background that quite the opposite of what his resume states about his prior employment to the Company is true. At his former job as President of Diamond Turf Equipment Inc. in Florida, a company owned by a Mr. Monte Friedkin of Benada Aluminum of Florida, Mr. Utley with the aid of Mr. William Dick of "FL", had stolen off with ideas learned while employed at Friedkin's company relating to turf equipment. Mr. Utley had written these patents into his own company, Premiere Consulting, and his own name as inventor with no assignment to the company he worked for, Premiere Consulting was separate and apart from his employer. Upon discovering the absconded with patents, Mr. Friedkin demanded that the patent applications be turned over to the company as they were learned while working at his company by Mr. Utley. Mr. Utley refused to sign them over to his employer and was fired with cause immediately for these patent malfeasances. Mr. Friedkin was forced to immediately close the business and take a substantial multi-million dollar loss on the company due directly to this incident. Additionally, the company, Premiere Consulting, that was set up to receive the patents Mr. Utley misappropriated, was set up by Christopher Wheeler of Proskauer Rose LLP, who was the first person to see the technologies, who then brought to the Company to handle our patents Mssrs: Rubenstein, Joao, Utley and Dick. What Mssrs: Wheeler, Utley and Dick failed to disclose to our Company was the past patent malfeasances and the damage caused to Mr. Friedkin by their actions. I quote from the resume Mr. Wheeler submitted on behalf of his dear friend Mr. Utley to the Company to hire him as President and handle our most prized possession the patents:

Personal Resume

Professional History:

President, Diamond Turf Equipment, Inc. July, 1995 to July 1999.

In 1995 the company was engaged in refurbishing obsolete and run-out golf course maintenance equipment and had annual sales of \$250K. Since that time the company has been transformed into a manufacturer of new machines which compete favorably with the best of the market leaders and an expected revenue for 1999 of \$6M. The design of the machines was by Brian and was accomplished while putting together a manufacturing and marketing team capable of supporting the rapid growth of the company.

U.S. Patent and Trademark Office
Commissioner of Patent & Trademarks
Thursday, February 12, 2004
Page 5 of 8

This resume is materially different from the truth. Mr. Utley was fired for cause and the company Diamond Turf Equipment Inc. closed upon his firing. Understanding that the same people (Wheeler, Utley & Dick) who had caused this calamity are the very same people who have caused similar harm to our Company, using similar patent malfeasances is core to understanding why our patents have such a bizarre array of problems. The very fact that this was not disclosed in writing and waivers, by any of the attorneys and further lied about in Utley's resume by Mr. Wheeler who procures the false resume to cover this up, is a sign of their intent to commit similar crime upon our Company and perpetrate similar fraud upon the USPTO. Had the Company been aware of this past patent malfeasance they were involved with the Company surely would have never hired any of them.

With this understanding, it appears that the intent of "FL" was to replace patents of the original inventions with patents whereby Mr. Utley was now named an inventor and finally in some instances Mr. Utley was named sole inventor of certain inventions of the Company. These applications in Utley's sole name are for part of the core technology that he did not invent such as this application. Further, "Zoom and Pan Imaging Design Tool" Provisional patent 60 233 341 and "Zoom and Pan Imaging Using A Digital Camera" Provisional patent 60 233 344 are further instances whereby "FL" writes patents directly into Mr. Utley's name in an attempt to abscond with core formula's and ideas of the original inventions by the true and correct inventors. These Provisional patents with Mr. Utley as sole inventor with no assignment to the Company, were not disclosed to the Company or its shareholders and were only revealed when the Company found in Mr. Utley's possession a set of patents that was markedly different than what the inventors were seeing and signing for. These inventions were undisclosed to the Company and appear to be filed in an attempt to abscond with core features of the original inventions from the true and correct inventors listed above. When caught with two sets of patent books, similar to maintaining cooked accounting books, Mr. Utley was terminated with cause and "FL" was terminated as patent counsel. This patent 09 630 939, has similar elements to their prior patent scam at Diamond Turf, Inc. in that Mr. Utley rewrites with the aid of Mr. Dick and other "FL" attorneys, patents again into his name that were not his inventions. This Non Provisional patent 09 630 939 was replacing the original Provisional, which Joao had already filed as Non Provisional, which "FL" then claimed Joao's work was so wrong, that correcting it was impossible, and this new Non-Provisional needed to be filed with the correct content and correct inventors. Knowing the true and correct inventors and having had them sign applications for what appeared the true invention, "FL" attorneys then threw those signatures and the application out and replaced it with this application before the USPTO, claiming Mr. Utley as an inventor and replacing himself with inventors Mssrs: Rosario and Shirajee.

U.S. Patent and Trademark Office
Commissioner of Patent & Trademarks

Page 6 of 8

Finally, "BSZT" the last attorneys of record handling the patents, also failed to file the correct inventors knowingly, with malice and intent to further perpetrate and cover up such fraud of prior attorneys to the USPTO, after repeatedly being requested to make the changes to them. Upon finding that Mr. Utley was not an inventor of anything and that the inventors were wrong, "BSZT" assured the Company that these issues were being corrected. They had me sign a power of attorney on Mr. Utley's behalf to turn the inventions back over to the Company in his name and remove him from any applications his name appeared on, due to his employment and invention agreements signed with the Company that strictly prohibited such misappropriations. Mr. Utley was to be removed from any/all patents that have his name on them and the ones in which he was named as the sole inventor, were to be corrected and turned back over to the Company. Now, upon contacting the USPTO we find that many of these changes remain unchanged, in what appears another attempt to continue this fiasco and cover up for the attorneys before them, "BSZT" made virtually no changes requested by the Company.

At all times, all attorneys were fully cognizant of the true inventors and the true invention for this application. Finally, all these attorneys failed to report the prior counsels misconduct in these matters to the OED Director or any other department at the USPTO or other Federal Agencies and left the Company with many serious problems in the patents. The incorrect inventors are a great risk to the shareholders of the Company and need to be remedied immediately if possible, as the assignment of these patents to the Company and any successive assignments are not signed by the true and correct inventors and thus pose the question of what they currently have rights to in relation to their investments. Finally, many of the attorneys involved in these patents appear to have financial interests and severe conflicts of interest with the Company whereby the company's inventions being approved would stand in direct conflict with either with inventions of their own (Raymond Joao) or patent pools overseen by them (Kenneth Rubenstein).

Currently, I am listed on the patents for examination purposes and after reviewing the inventors listed have determined on behalf of Iviewit and its affiliates, and, on my own behalf as an original inventor at the time of creation, that the true inventors are as listed above and not what exists currently on this application. I was there at the time of invention and all times relevant hereto, and, swear that all of the following statements are true and correct statements to the best of my knowledge.

Commissioner of Patent & Trademarks
Thursday, February 12, 2004
Page 7 of 8

These issues and many other of attorney misconduct in the above mentioned application are currently under a pending investigation with the Director of OED whom advised me to begin correcting the inventor issues with the USPTO Examiners.

Failed: 3/23/2004
 5:23 PM

Dear Shareholders and Friends of Iviewit,

Today Iviewit's worst fears were realized when the United States Patent and Trademark Office (USPTO) contacted me regarding a certain provisional patent application in Mr. Brian Utley's name that we are supposed to have as the possession of Iviewit. I have attached the correspondence from the USPTO, which basically states that since neither Iviewit nor myself are listed on such applications we have no rights, title or interest in the patent application. Therefore, the USPTO cannot disclose any information regarding the application to us. I am astounded that our counsel Foley & Lardner who filed the application for Utley and Blakely Sokoloff Zafman and Taylor have never told us of this issue and never reported this to any authorities. In fact they made it part of the Company portfolio.

More disturbing is that this patent application has been listed on all of our portfolios (I have attached an excerpt from our most recent portfolio) prepared by the law firms Foley and Lardner and distributed to shareholders and investors as property of Iviewit. I am uncertain which application of Utley's this is ("Zoom & Pan Imaging on a Digital Camera" or "Zoom & Pan Imaging Design Tool") but either way it is not our property as represented on the portfolios. There has never been assignment by Utley or any of the law firms to the Company. I am saddened to report this loss to all of you but this is the case. There are several other patents Utley has found his way onto and we are also attempting to correct those. I am not sure what crimes this constitutes but I am checking with counsel as to our remedies.

As I have stated prior, Mr. Utley and Mr. William Dick, Esq. of Foley and Lardner have had similar patent problems in the past, which led to the loss of a business Utley ran for another South Florida businessman. Chris Wheeler our attorney from Proskauer Rose had set a company up for Utley, in which Dick and Utley wrote patents into, patents that related to Mr. Utley's employment as President of a lawnmower company Diamond Turf Equipment. The patent applications were for lawnmower stuff and Utley would not assign them to his employer when he was caught, he was fired with cause (opposite of what the resume submitted to all of you stated) and the company was forced to close, the owner taking a three million dollar loss.

I have been working with the USPTO who is looking into these matters and a team of their agents to attempt to attempt correct everything so that your investment may one day inure benefits to you, not Utley et al. I have found out that several patents we thought were assigned to the Company and its investors by our attorneys also have never been completed despite what we have been told. I will keep everyone posted as we find out more. Finally, I have attached an inventor change form, one of several that we have filed with the USPTO to correct this Utley insertion and deletion of Zakirul and Jude and inventors and it is signed by Stephen Warner of Crossbow Ventures who has recently been very helpful in his efforts to help the Company.

I truly am sorry for any misleading information that was distributed by these firms and it was no fault of the Companies (except in regards to Utley et al.) as we too were misrepresented. My heart nevertheless is truly broken with this news for all concerned.

Thank you,

Eliot I Bernstein

Nov. 29, 2000; paras. (a)(1) and (a)(2) revised, 68 FR 48286, Aug. 13, 2003, effective Sept. 12, 2003]

§ 1.13 Copies and certified copies.

(a) Non-certified copies of patents, patent application publications, and of any records, books, papers, or drawings within the jurisdiction of the United States Patent and Trademark Office and open to the public, will be furnished by the United States Patent and Trademark Office to any person, and copies of other records or papers will be furnished to persons entitled thereto, upon payment of the appropriate fee. See § 2.201 of this chapter regarding copies of trademark records.

(b) Certified copies of patents, patent application publications, and trademark registrations and of any records, books, papers, or drawings within the jurisdiction of the United States Patent and Trademark Office and open to the public or persons entitled thereto will be authenticated by the seal of the United States Patent and Trademark Office and certified by the Director, or in his or her name, upon payment of the fee for the certified copy.

[Revised, 58 FR 54504, Oct. 22, 1993, effective Jan. 3, 1994; revised, 65 FR 57024, Sept. 20, 2000, effective Nov. 29, 2000; para. (b) revised, 68 FR 14332, Mar. 25, 2003, effective May 1, 2003; revised, 68 FR 48286, Aug. 13, 2003, effective Sept. 12, 2003; para. (b) revised, 68 FR 70996, Dec. 22, 2003, effective Jan. 21, 2004]

§ 1.14 Patent applications preserved in confidence.

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

(i) *Patented applications and statutory invention registrations.* The file of an application that has issued as a patent or published as a statutory invention registration is available to the public as set forth in § 1.11(a). A copy of the patent application-as-

filed, the file contents of the application, or a specific document in the file of such an application may be provided upon request and payment of the appropriate fee set forth in § 1.19(b).

(ii) *Published abandoned applications.* The file of an abandoned application that has been published as a patent application publication is available to the public as set forth in § 1.11(a). A copy of the application-as-filed, the file contents of the published application, or a specific document in the file of the published application may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b).

(iii) *Published pending applications.* A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending application that has been published, except as provided in paragraph (c) or (h) of this section.

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration,

a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

(v) *Unpublished pending applications (including provisional applications) whose benefit is claimed.* A copy of the file contents of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the benefit of the application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, or a specific document in the file of the pending application may also be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified.* A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vii) *When a petition for access or a power to inspect is required.* Applications that were not published or patented, that are not the subject of a benefit claim under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an

international patent application publication that was published in accordance with PCT Article 21(2), or are not identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2), are not available to the public. If an application is identified in the file contents of another application, but not the published patent application or patent itself, a granted petition for access (see paragraph (h)) or a power to inspect (see paragraph (c)) is necessary to obtain the application, or a copy of the application.

(2) Information concerning a patent application may be communicated to the public if the patent application is identified in paragraphs (a)(1)(i) through (a)(1)(vi) of this section. The information that may be communicated to the public (*i.e.*, status information) includes:

(i) Whether the application is pending, abandoned, or patented;

(ii) Whether the application has been published under 35 U.S.C. 122(b);

(iii) The application “numerical identifier” which may be:

(A) The eight-digit application number (the two-digit series code plus the six-digit serial number); or

(B) The six-digit serial number plus any one of the filing date of the national application, the international filing date, or date of entry into the national stage; and

(iv) Whether another application claims the benefit of the application (*i.e.*, whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, the numerical identifier of the application, the specified relationship between the applications (*e.g.*, continuation), whether the application is pending, abandoned or patented, and whether the application has been published under 35 U.S.C. 122(b).

(b) *Electronic access to an application.* Where a copy of the application papers or access to the application may be made available pursuant to paragraphs (a)(1)(i) through (a)(1)(vi) of this section, the Office may at its discretion provide access to only an electronic copy of the specification, drawings, and file contents of the application.

(c) *Power to inspect a pending or abandoned application.* Access to an application may be provided to any person if the application file is available, and the application contains written authority (e.g., a power to inspect) granting access to such person. The written authority must be signed by:

- (1) An applicant;
- (2) An attorney or agent of record;
- (3) An authorized official of an assignee of record (made of record pursuant to § 3.71 of this chapter); or

(4) A registered attorney or agent named in the papers accompanying the application papers filed under § 1.53 or the national stage documents filed under § 1.495, if an executed oath or declaration pursuant to § 1.63 or § 1.497 has not been filed.

(d) *Applications reported to Department of Energy.* Applications for patents which appear to disclose, purport to disclose or do disclose inventions or discoveries relating to atomic energy are reported to the Department of Energy, which Department will be given access to the applications. Such reporting does not constitute a determination that the subject matter of each application so reported is in fact useful or is an invention or discovery, or that such application in fact discloses subject matter in categories specified by 42 U.S.C. 2181(c) and (d).

(e) *Decisions by the Director or the Board of Patent Appeals and Interferences.* Any decision by the Director or the Board of Patent Appeals and Interferences which would not otherwise be open to public inspection may be published or made available for public inspection if:

(1) The Director believes the decision involves an interpretation of patent laws or regulations that would be of precedential value; and

(2) The applicant, or a party involved in an interference for which a decision was rendered, is given notice and an opportunity to object in writing within two months on the ground that the decision discloses a trade secret or other confidential information. Any objection must identify the deletions in the text of the decision considered necessary to protect the information, or explain why the entire decision must be withheld from the public to protect such information. An applicant or party will be given time, not less than twenty days, to request reconsideration and seek court review before any portions of a deci-

sion are made public under this paragraph over his or her objection.

(f) *Publication pursuant to § 1.47.* Information as to the filing of an application will be published in the *Official Gazette* in accordance with § 1.47(c).

(g) *International applications.* (1) Copies of international application files for international applications which designate the U.S. and which have been published in accordance with PCT Article 21(2), or copies of a document in such application files, will be furnished in accordance with PCT Articles 30 and 38 and PCT Rules 94.2 and 94.3, upon written request including a showing that the publication of the application has occurred and that the U.S. was designated, and upon payment of the appropriate fee (see § 1.19(b)), if:

(i) With respect to the Home Copy (the copy of the international application kept by the Office in its capacity as the Receiving Office, see PCT Article 12(1)), the international application was filed with the U.S. Receiving Office;

(ii) With respect to the Search Copy (the copy of an international application kept by the Office in its capacity as the International Searching Authority, see PCT Article 12(1)), the U.S. acted as the International Searching Authority, except for the written opinion of the International Searching Authority which shall not be available until the expiration of thirty months from the priority date; or

(iii) With respect to the Examination Copy (the copy of an international application kept by the Office in its capacity as the International Preliminary Examining Authority), the United States acted as the International Preliminary Examining Authority, an International Preliminary Examination Report has issued, and the United States was elected.

(2) A copy of an English language translation of a publication of an international application which has been filed in the United States Patent and Trademark Office pursuant to 35 U.S.C. 154(d)(4) will be furnished upon written request including a showing that the publication of the application in accordance with PCT Article 21(2) has occurred and that the U.S. was designated, and upon payment of the appropriate fee (§ 1.19(b)(4)).

(3) Access to international application files for international applications which designate the U.S. and which have been published in accordance with

PCT Article 21(2), or copies of a document in such application files, will be permitted in accordance with PCT Articles 30 and 38 and PCT Rules 44^{ter}.1, 94.2 and 94.3, upon written request including a showing that the publication of the application has occurred and that the U.S. was designated.

(4) In accordance with PCT Article 30, copies of an international application-as-filed under paragraph (a) of this section will not be provided prior to the international publication of the application pursuant to PCT Article 21(2).

(5) Access to international application files under paragraphs (a)(1)(i) through (a)(1)(vi) and (g)(3) of this section will not be permitted with respect to the Examination Copy in accordance with PCT Article 38.

(h) *Access or copies in other circumstances.* The Office, either *sua sponte* or on petition, may also provide access or copies of all or part of an application if necessary to carry out an Act of Congress or if warranted by other special circumstances. Any petition by a member of the public seeking access to, or copies of, all or part of any pending or abandoned application preserved in confidence pursuant to paragraph (a) of this section, or any related papers, must include:

(1) The fee set forth in § 1.17(h); and

(2) A showing that access to the application is necessary to carry out an Act of Congress or that special circumstances exist which warrant petitioner being granted access to all or part of the application.

FEES AND PAYMENT OF MONEY

§ 1.16 National application filing fees.

(a) Basic fee for filing each application for an original patent, except provisional, design, or plant applications:

By a small entity (§ 1.27(a)) . . . \$385.00
 By other than a small entity \$770.00

(b) In addition to the basic filing fee in an original application, except provisional applications, for filing or later presentation of each independent claim in excess of 3:

By a small entity (§ 1.27(a)) \$43.00
 By other than a small entity \$86.00

(c) In addition to the basic filing fee in an original application, except provisional applications, for filing or later presentation of each claim (whether independent or dependent) in excess of 20 (Note that § 1.75(c) indicates how multiple dependent claims are considered for fee calculation purposes.):

By a small entity (§ 1.27(a)) \$9.00
 By other than a small entity \$18.00

(d) In addition to the basic filing fee in an original application, except provisional applications, if the application contains, or is amended to contain, a multiple dependent claim(s), per application:

By a small entity (§ 1.27(a)) . . . \$145.00
 By other than a small entity \$290.00

(Subsection (e) amended Nov. 29, 1999, Public Law 106-113, sec. 1000(a)(9), 113 Stat. 1501A-564, 588, 589 (S. 1948 secs. 4503(b)(2), 4801 and 4802).)

(Subsections (f) and (g) added Nov. 29, 1999, Public Law 106-113, sec. 1000(a)(9), 113 Stat. 1501A-589 (S. 1948 sec. 4802).)

35 U.S.C. 120 Benefit of earlier filing date in the United States.

An application for patent for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in an application previously filed in the United States, or as provided by section 363 of this title, which is filed by an inventor or inventors named in the previously filed application shall have the same effect, as to such invention, as though filed on the date of the prior application, if filed before the patenting or abandonment of or termination of proceedings on the first application or on an application similarly entitled to the benefit of the filing date of the first application and if it contains or is amended to contain a specific reference to the earlier filed application. No application shall be entitled to the benefit of an earlier filed application under this section unless an amendment containing the specific reference to the earlier filed application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this section. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section.

(Amended Nov. 14, 1975, Public Law 94-131, sec. 9, 89 Stat. 691; Nov. 8, 1984, Public Law 98-622, sec. 104(b), 98 Stat. 3385; Nov. 29, 1999, Public Law 106-113, sec. 1000(a)(9), 113 Stat. 1501A-563 (S. 1948 sec. 4503(b)(1)).)

35 U.S.C. 121 Divisional applications.

If two or more independent and distinct inventions are claimed in one application, the Director may require the application to be restricted to one of the inventions. If the other invention is made the subject of a divisional application which complies with the requirements of section 120 of this title it shall be entitled to the benefit of the filing date of the original application. A patent issuing on an application with respect to which a requirement for restriction under

this section has been made, or on an application filed as a result of such a requirement, shall not be used as a reference either in the Patent and Trademark Office or in the courts against a divisional application or against the original application or any patent issued on either of them, if the divisional application is filed before the issuance of the patent on the other application. If a divisional application is directed solely to subject matter described and claimed in the original application as filed, the Director may dispense with signing and execution by the inventor. The validity of a patent shall not be questioned for failure of the Director to require the application to be restricted to one invention.

(Amended Jan. 2, 1975, Public Law 93-596, sec. 1, 88 Stat. 1949; Nov. 29, 1999, Public Law 106-113, sec. 1000(a)(9), 113 Stat. 1501A-582 (S. 1948 sec. 4732(a)(10)(A)).)

35 U.S.C. 122 Confidential status of applications; publication of patent applications.

(a) **CONFIDENTIALITY.**— Except as provided in subsection (b), applications for patents shall be kept in confidence by the Patent and Trademark Office and no information concerning the same given without authority of the applicant or owner unless necessary to carry out the provisions of an Act of Congress or in such special circumstances as may be determined by the Director.

(b) **PUBLICATION.**—

(1) **IN GENERAL.**—

(A) Subject to paragraph (2), each application for a patent shall be published, in accordance with procedures determined by the Director, promptly after the expiration of a period of 18 months from the earliest filing date for which a benefit is sought under this title. At the request of the applicant, an application may be published earlier than the end of such 18-month period.

(B) No information concerning published patent applications shall be made available to the public except as the Director determines.

(C) Notwithstanding any other provision of law, a determination by the Director to release or not to release information concerning a published patent application shall be final and nonreviewable.

(2) **EXCEPTIONS.**—

(A) An application shall not be published if that application is—

Utley patents
with arrows

This portfolio was prepared and submitted by William Dick for the Virginia Bar and further corresponds to the one prepared by Foley and Lardner after Utley was found with two sets of patent books. Prior, Utley only patents were not in any records. Further it is wrong to list assets like 341 which are not the property of the Company on a patent portfolio that is distributed to shareholders and investors.

Subject: iviewit.com Welcomes Brian Utley.

Dear Shareholders,

As of August 3rd, 1999 the Board of Directors of iviewit.com has approved and confirmed Brian Utley as President and COO. Mr. Utley will assume leadership of the company and the responsibility for organizing our strategic initiatives and licensing opportunities. Brian brings over thirty years of management experience from IBM and is highly respected within the computer industry. We are fortunate to bring Brian to iviewit.com and look forward to his valuable contribution to the success of the company.

Brian can be reached at utley_b@bellsouth.net
mailto:utley_b@bellsouth.net or soon at utley@iviewit.com
<<mailto:utley@iviewit.com>>.

By phone at work through Goldstein & Lewin at 561-994-5050 or cell at 561-289-8145.

Brian's Personal Resume

Professional History:

President, Diamond Turf Equipment, Inc. July, 1995 to July 1999.

In 1995 the company was engaged in refurbishing obsolete and run-out golf course maintenance equipment and had annual sales of \$250,000. Since that time the company has been transformed into a manufacturer of new machines that compete favorably with the best of the market leaders and expected revenue for 1999 of \$6M. The design of the machines was by Brian and was accomplished while putting together a manufacturing and marketing team capable of supporting the rapid growth of the company.

President, Premier Connections Inc., November, 1991 to Present.
Premier Connections provides consultation and support services in computer and related business management. Customers have included IBM and other small businesses.

IBM, 1955 to 1991.

Brian retired from IBM as Vice-President and General Manager, IBM Boca Raton.

Prior to his assignment in Boca Raton Brian spent 5 years in Europe as Group Director for PC's and small Systems. This responsibility covered all aspects of product management for all European, Middle East and African countries.

In 1983 Brian was appointed General Manager, IBM Biomedical Systems and asked by the IBM President, John Opel, to evaluate develop the long range strategy for this business unit. Brian subsequently reported to the President that the Business Unit, while quite viable, should be sold to a related business in the medical community. Having received approval to do so, he negotiated a profitable sale for IBM.

Between 1965 and 1983 Brian was the project and Systems manager for many major IBM computer Systems that earned IBM billions of dollars in revenue. The most notable of these was the 5E3E and AS400, one of IBM's most technology aggressive development programs ever and still one off IBM's most popular systems.

Brian entered the IBM laboratories in 1959 and immediately became the most prominent engineer on his first project with many innovative designs. Because of this, he was assigned to the German IBM laboratories to train German engineers in computer technology. He has been awarded a number of patents the most recent of which was granted in 1998.

From his start in October 1955 to the time he entered the laboratories Brian was a customer engineer responsible for maintaining IBM equipment on customer premises. During this time he self-taught computer technology and transistor theory and developed the first IBM field course in transistors. This is the accomplishment, which led to his assignment in the laboratories.

Hobbies:

Brian is a jogger and for 40 years has been an avid glider pilot with many competitive successes.

Other Activities:

Brian has been a director of the Florida Atlantic University Foundation Board of Trustees since

1992 and has served as Treasurer, head of the Investment Committee, and is currently Chairman of the Board.

In addition, he is a director of the Soaring Society of America and Chairman of the Soaring Society of America Foundation. In the past, he has served on the Boca Raton Chamber of Commerce Board, the Florida Philharmonic Board of Directors, and the Florida Governor's Council of One Hundred and is past president of the Soaring Society of America.

Family:

Brian is married to Sharon, is the father to 5 children and has lived in Boca Raton since 1988.

Sincerely,

Board of Directors

Note	
Here Utley is not a graduate from college but in the Wachovia Private Placement he states he is, in deposition he states he is not.	

self-taught computer technology and transistor factory and developed the first IBM field course in transistors. This is the accomplishment which led to his assignment in the laboratories.

Education:

Having been born in England, he attended Beverley Grammar School and graduated in 1948 at 16. In 1949 he emigrated to the United States and completed his senior year at Ogden High School, Ogden, Utah.

He attended college at Weber College, Ogden, Utah and San Francisco City College completing two years of study.

Hobbies:

Brian is a jogger and for 45 years has been an avid glider pilot with many competitive successes.

Q. Okay. You just failed to mention 102

that in your previous --

A. I'm sorry, yes.

Q. Okay. And what did you do at

Diamond Turf Lawn Mower?

A. I was president.

Q. You were president. For the full

four years?

A. Yes.

Q. Okay.

A. My recollection is a little hazy.

It could have been 95, 96 when I started.

Q. Okay. So you were president of this

company for approximately three to four years?

A. Yes.

Q. And what was your role at Diamond

Turf Lawn Mower as president; what did you do?

A. I ran the company.

Q. Did you take on the position not

only of president but also as CFO or anything of

that nature, or you just did strictly like a

chief operating officer; what was your role

exactly?

A. I suppose you could consider it to

be a cross between a chief operating officer and

the chief engineer.

103

Q. And what did Diamond Turf Law Mower do; what sort of company is that?

A. It produced maintenance equipment for golf courses.

Q. Okay. And were you working also doing engineering for the company as well?

A. Yes.

Q. And that engineering capabilities that you have, was that something you garnered through your employment with IBM or is that something that you had specific knowledge of outside of your employment with IBM?

A. Both.

Q. This was not engineering of electrical components; this was engineering of mechanical systems; is that what this was?

A. Every, virtually every mechanical system has an electrical component.

Q. Okay.

A. And a hydraulic component in this particular case.

Q. And when did you -- when you ceased worked with Diamond Turf Lawn Mower, was that an amicable leaving or was there some problem or did

everything work out okay with that?

104

A. Well, there was a, there was a
dispute over intellectual property. There was no
intellectual property agreement in my employment
agreement and there were certain inventions that
I made that we were unable to resolve ownership
of.

Q. Okay. So these were inventions that
you developed while you were employed by Diamond
Turf Lawn Mower?

A. Yes.

Q. Okay. Can you describe those
inventions to me.

A. They related to hydro-mechanical
equipment.

Q. Okay. What exactly with hydraulic
mechanical equipment?

A. How much detail you want me to go in
to?

Q. Well, were they related somehow to
the operations of the hydraulics of the equipment
or were they strictly mechanical?

A. They related to a hydro-mechanical
system, which means that it involves the
integration of hydraulics into a mechanically

operating piece of equipment.

105

Q. Okay. And that's what all these patents, or were all these patents or were all these inventions, rather, the subject of?

A. Yes. Almost all the equipment that Diamond Turf produced or was involved with was hydro-mechanical.

Q. Are there any current patents or patents pending or applications for patents on these things that you hold?

A. No.

Q. Who holds the patent rights or if there are any patent rights, who has applied for those?

A. I'm not aware of any one.

Q. So you're not aware of any one making claim to these intellectual properties at this point?

A. No.

Q. When were you first introduced to Iviewit or its products by Mr. Wheeler? I'm assuming that Mr. Wheeler was the one who introduced you to the company.

A. Yes.

Q. And when was the first time that you

we're talking about them because you said billing statements, which could be something totally different, I don't know.

MR. SELZ: That's the attached exhibits to the Amended Complaint in this matter that we're referring to.

MR. PRUSASKI: Okay. Thanks.

By MR. SELZ:

Q. Now, you had referenced Mr. Dick doing some patent work for yourself; is that correct?

A. Yes.

Q. And was that any patents arising from your employment with Diamond Turf?

A. It was arising from the technology and engineering work that I did, yes.

Q. So the hydro-mechanical work that you had done at Diamond Turf?

A. Yes.

Q. And was there ever a dispute between yourself and the owner of Diamond Turf with regard to the patents involved for that hydro-mechanical work?

MR. PRUSASKI: Objection, relevance and to the form.

THE WITNESS: There was a

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of

Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

**eliot
Note**

Monte Friedkin his last employer has stated that he did not tell him and that when he found out he fired him

president and COO of Iviewit to Wachovia?

243

A. We shared nondisclosure agreements and communicated as required in order to construct the business plan.

Q. And did they require or request that you provide them with a CV as part of the business plan to evidence your expertise.

A. I believe so.

MR. PRUSASKI: Objection to form.

MR. SELZ: I'll restate the question.

By MR. SELZ:

Q. Did Wachovia Bank request that you provide personal information to them as part of that business plan?

A. Yes.

Q. And did you provide that personal information in the form of a curriculum vitae or CV?

A. It was integrated in prior editions of the business plan and flowed into the one that was developed with Wachovia.

Q. Now, when Chris Wheeler first introduced you to Iviewit, was he aware of the situation at Diamond Turf and yourself and

Mr. Monte Freedkin or what was Mr. Wheeler's

244

knowledge of your position at Diamond Turf, to the best of your knowledge?

MR. PRUSASKI: Objection to form.

MR. SELZ: Okay. I'll restate the question. I'm sorry. Getting a little tired.

MR. PRUSASKI: I'm just objecting to the extent that you're asking him what Chris Wheeler's personal knowledge was.

MR. SELZ: Okay.

By MR. SELZ:

Q. To the extent that you know, what was Chris Wheeler's personal knowledge of that situation?

MR. PRUSASKI: Objection to form.

THE WITNESS: I believe Chris, Mr. Wheeler was fully cognizant of my relationship to Diamond Turf Equipment and to Mr. Freedkin.

By MR. SELZ:

Q. And he was aware about your departure from that company and that situation?

A. Yes.

Q. Involving your employed and your change of employment when you left Diamond Turf?

A. Yes.

Q. Other than your retirement at IBM, was there any other reason why you left IBM's employ?

A. No.

Q. Do you have any ongoing dispute with either IBM or Diamond Turf?

A. No.

Q. Going back to the employment of an attorney when you were at Diamond Turf, was there a retainer agreement that you recall signing on behalf of Diamond Turf to employ an attorney there? Or I'll take that back. I think you said that you never employed an attorney there; is that correct?

A. That is correct.

Q. When you hired an attorney personally, did you have a retainer agreement that you signed?

A. No.

Q. Do you have any letter or any other document evidencing the rates to be charged and the services to provided by that attorney?

A. I would have to research that question.

1 training that you've had or maybe you -- you did 113
2 indicate that you had any degree in mathematics.
3 Is that something that you have some experience
4 from from some other portion of your employment
5 or background?
6 A. I have training and experience in
7 mathematics.
8 Q. I'm sorry.
9 A. I say I have training and experience
10 in mathematics.
11 Q. How about in the scaling video
12 invention; is that part of what you've already
13 described?
14 A. That is readily derived from a
15 mathematical background.
16 Q. How about the remote control video
17 applications?
18 A. That's different.
19 Q. Okay. Now going back to --
20 A. What --
21 Q. -- the patent dealing specifically
22 with remote control applications.
23 A. What I did there was I established
24 the fact that the design point that Elicot had
25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Elliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

1 Q. Okay. And the correlation was for 115
2 development of future cameras or was that simply
3 an observation that was made?
4 A. It was an observation that current
5 camera technology incorporates zoom and pan
6 technology.
7 Q. Okay. How about any patent or
8 patent applications dealing with scales video or
9 zoom video imaging applications other than what
10 we've already discussed?
11 A. Without looking, and I apologize for
12 this, without looking at the specific patent
13 filings by name and number, I think, you know,
14 we're not really going to be able to get much
15 further on this discussion.
16 Q. Okay.
17 A. I don't want to put you off at all,
18 but I just want to say that to pursue a detailed
19 questioning in this specific area, I need to be
20 able to refresh my mind with what is in the
21 record.
22 Q. Okay. And are those documents that
23 you have in your possession someplace?
24 A. No.
25 Q. You don't have any of the paperwork

THE WITNESS: There was a

266

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

that what it is?

A. Yes.

Q. And Iviewit would be listed as a primary patent holder; is that how it would be?

A. They were assigned to Iviewit.

Q. They were assigned to Iviewit. Are you aware of any police report that was ever filed involving Mr. Mike Real and yourself?

MR. PRUSASKI: Objection, relevance.

By MR. SELZ:

Q. Go ahead and answer the question, if you can, sir.

A. There was a dispute over the nature of the equipment that I bought from Iviewit as --

Q. Well, that really wasn't my question. My question was are you aware of a police report? And it's really a yes or no type of answer.

MR. PRUSASKI: Objection, relevance.

THE WITNESS: I believe there was a report.

By MR. SELZ:

Q. Okay. Do you know who filed that report?

A. Iviewit filed that report as far as

Filing Date Granted

MP
RESPONSE DUE 04 FEB 2001
DECL FEE

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 200.

A copy of this notice MUST be returned with the reply.

FILING RECEIPT

OC00000005592299

Date Mailed: 12/04/2000

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).**

Management

Whereas the Company has retained Korn / Ferry to assist in the identification and recruitment of a high impact Chief Executive Officer (preferably from the media or entertainment industry) and Chief Technical Officer, iviewit has assembled a complementary and seasoned, management team with Fortune 100 and early-stage, entrepreneurial experience. This team consists of the following personnel:

Brian G. Utley, President (67) — For over 30 years, Mr. Utley was responsible for the development and world-wide management of many of IBM's most successful products such as the AS400 and the PC. His career with IBM culminated with his responsibility as Vice President and General Manager of IBM Boca Raton with a work force of over 6,000 professionals. He is a graduate of San Francisco City College.

Eliot I. Bernstein, Founder and Vice Chairman (37) — Prior to founding iviewit, Mr. Bernstein spent 15 years with SB Lexington where he was President of the West Coast Division creating and developing many innovative, computer-based multi-media marketing tools which remain in use supporting multi-billion dollar service industries. Mr. Bernstein is a graduate of the University of Wisconsin.

Michael A. Reale, Vice President of Operations (60) — Mr. Reale has over 20 years of operations experience, including P&L, quality, and delivery performance accountability. Most recently, Mr. Reale was the Chief Operating Officer for Boca Research (Nasdaq:BOCI), a manufacturer of personal computer enhancement and Internet thin client products. Mr. Reale received his BA and MBA from Pace University.

Raymond T. Hersh, Vice President of Finance (58) — Mr. Hersh has over 35 years of successful business and operating experience involving financial services, telecommunications, manufacturing, and corporate strategic planning. For over 20 years, Mr. Hersh has operated and grown companies in Florida, and most recently, he was co-founder and President/CEO of New Medical Concepts, Inc., a telecom company specializing in providing healthcare information. Earlier, he spent five years as an Enforcement Attorney with the U. S. Securities and Exchange Commission in New York City where he exited as a Branch Chief. He is a member of the New Jersey and New York Bars. Mr. Hersh received his BA from Lafayette College and his LLB/JD from the University of Pennsylvania.

Kevin J. Lockwood, Vice President of Sales and Business Development (40) — Mr. Lockwood joins iviewit from Cylex Systems where he held the position of Executive Vice President of Sales and assisted in securing three rounds of funding exceeding \$20 million. He also held the position of Head of Sales for Acer America, Inc. where he increased sales from a run rate of \$150 million annually to over \$1.5 billion annually in only a 17-month time. In addition, Mr. Lockwood successfully launched the Fujitsu P.C. into the U.S. and in the first year amassed revenues of over \$200 million. He is a graduate of the University of Maryland with a Bachelor of Science degree in Business Administration.

Guy Iantoni, Vice President of Sales (35) — Prior to joining iviewit in 1999, Mr. Iantoni was Senior Financial Representative with Fidelity Investments. From 1995 to 1997, he served as an Investment Management Consultant to the private client group of Morgan Stanley Dean Witter & Company, Inc. Mr. Iantoni has developed computer databases and systems to effectively market and target segments in both the financial markets and the healthcare industries. Mr. Iantoni is a graduate of the University of Wisconsin with an advanced degree in Pharmacy.

eliot Note
 Utley claims he is a graduate and contradicts in his deposition

Strategic Alliances

iviewit is creating a stable of strategic partners in the areas of technology, R&D, applications development, and video hosting and delivery. The Company has partnered with key industry leaders to develop precedence in the market. Partners include Greg Manning Auctions, Atlas Entertainment, Medical Online, Digital Island, Burst.com, and Versifi.

or where the site of that lawsuit was?

94

A. No.

Q. Was it in the federal court or state court?

A. I don't know.

Q. Was your deposition taken in the State of Florida --

A. No.

Q. -- or taken elsewhere?

A. It was taken in New York.

Q. In New York. Okay. Now, going back to something that Mr. Prusaski started but I don't think he completed with was some of your background information about your education. If you can just tell me from undergraduate onward what your educational background is, Sir, schools you attended, years of attendance and degree.

A. I don't have a degree.

Q. Okay.

A. I attended Weaver State University, which was then Weaver College, 1950.

Q. Okay.

A. San Fransisco City College, 1957, 1958.

Q. Okay. And you graduated from San

Francisco College or did not?

95

A. I don't have a degree.

Q. Okay. So you never completed your course at San Fransisco then?

A. Right.

Q. With regard to your employment experience, you had stated your employment with IBM. What years was that from, Sir?

A. 1955 through 1992.

Q. 92. And your first employment with IBM in 1955, what position was that in if you can recall?

A. I was employed as a customer engineer.

Q. All right. And after that, you were promoted to what position?

A. In 1960 I was promoted to development engineer, electrical engineer.

Q. At that point, were you supervising a staff or working with other engineers below you at that point?

A. I was involved in design of a computer.

Q. Were you the leader of any design team or were you just an individual engineer

EXHIBIT "B"

EXHIBIT "B"

Patent Filing Process

- (i) a patent attorney's first contact with a *bona fide* inventor is where that attorney receives a "disclosure" from that inventor, or a series of disclosures, to begin the framework of a provisional²⁵ patent application or a non-provisional²⁶ patent application, and where said inventor certainly was not Utley, Utley was not there at the time of the inventions, as the first disclosures were made to Rubenstein and, upon information and belief, the patent evaluator of, among others, the multimedia patent pools commonly known as Motion Picture Experts Group ("MPEG") 2 and MPEG 4; and
- (ii) from the framework of the first disclosures, a patent counsel then forms "claims" to that invention where the claims are meant to precisely identify to which areas of protection an inventor gleans from the exact description of his or her invention according to the disclosures, and where the drafting of such claims are the exclusive affair of patent counsel subject to review by the inventor, and where said inventor certainly was not Utley; and
- (iii) once the framework of the invention and the claims are approved by an inventor, and in all cases herein, said inventor was not Utley, patent counsel then puts forth to a *bona fide* inventor what is known as the Declaration and Power of Attorney document that contains strict requirements according to the law for inventors and where said inventor was not Utley as he took no part in the formulation of the invention, took no part in the first disclosures of the inventions, took no part, or rather, should have taken only a limited role supporting the inventor in reviewing the claims, and, consequently, signing an Oath of the Applicant according to the evidence presented below, falls outside the requirements of the law in this disingenuous ploy by Respondent and Utley; and
- (iv) once patent counsel has completed all steps in (i) to (iii), and only then, patent counsel actually files a patent application with the United States Patent and Trademark Office ("USPTO"), and where the damage by Respondent had already occurred in (iii); and
- (v) once patent counsel has actually filed an application with the USPTO, from time to time, he or she may be called upon to respond to challenges to the inventions from the USPTO (commonly referred to as office actions) and where the damage by Respondent had already occurred in (iii); and

²⁵ Define provisional

²⁶ Define non-provisional

(vi) and once favorably responded to and having such responses accepted by USPTO to office actions, patent counsel will receive what is known as a Notice of Issuance of the patent for the inventions disclosed and where the damage by Respondent had already occurred in (iii); and

(vii) some three months or so after receiving a Notice of Issuance, the USPTO will afford the applicant (*bona fide* inventor or his assignee as the case may be) a granted patent, and where the damage by Respondent had already occurred in (iii).

DOROTHY H. WILKEN
CLERK OF CIRCUIT COURT
CIRCUIT CIVIL DIVISION

**DEFENDANTS MOTION FOR LEAVE TO AMEND TO ASSERT
COUNTERCLAIM FOR DAMAGES**

Defendants, IVIEWIT.COM, INC., IVIEWIT HOLDINGS,
INC. and IVIEWIT TECHNOLOGIES, INC., by and through their undersigned
counsel, hereby move this Court for Leave to Amend their Answer so as to assert a
counterclaim in this matter pursuant to Rule 1.170(f) of the Florida Rules of Civil
Procedure and as grounds therefore would state as follows:

1. That the Defendants move to amend their answer in this matter so as to
include a counterclaim in this matter, which by its nature appears to be a compulsory
counterclaim to the extent that the issues arise out of the same nexus of events, as

justice requires that the counterclaim be tried at the same time as the complaint and answer so that all pending issues between the parties may be adjudicated in this action.

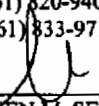

2. That as a result of fact that additional evidence in support of the Defendants' counterclaims is found in the Plaintiff's own files and records, the Plaintiff will not be prejudiced by the amendment of the Defendants' answer in this matter, nor will this matter be delayed as to the trial of same.

3. Defendants have attached hereto a copy of the proposed counterclaim.

WHEREFORE the Defendants, move this Honorable Court for the entry of an order permitting the Defendants to amend their answer in this matter.

I HEREBY CERTIFY that a true and correct copy of the foregoing has been provided by U.S. Mail and fax transmission this 26th day of January, 2003 to: Christopher W. Prusaski, Esq., Proskauer Rose, LLP, 2255 Glades Road, Suite 340 W, Boca Raton, FL 33431.

IN THE CIRCUIT COURT OF THE
15th JUDICIAL CIRCUIT IN AND
FOR PALM BEACH COUNTY,
FLORIDA

PROSKAUER ROSE, LLP, a New York
limited partnership,

CASE NO.: CA 01-04671 AB

Plaintiff,

vs.

IVIEWIT.COM, INC., a Delaware
corporation, IVIEWIT HOLDINGS,
INC., a Delaware corporation and,
IVIEWIT TECHNOLOGIES, INC.,
a Delaware corporation,

Defendants,

COUNTERCLAIM FOR DAMAGES

COME NOW the Counter Plaintiffs, IVIEWIT.COM, INC., IVIEWIT
HOLDINGS, INC., IVIEWIT TECHNOLOGIES, INC. and IVIEWIT LLC,
hereinafter collectively referred to as "IVIEWIT" or Counter Plaintiffs, and hereby
sues Counter Defendant, PROSKAUER ROSE, LLP, hereinafter "PROSKAUER",
a New York limited partnership, and alleges as follows:

GENERAL ALLEGATIONS COMMON TO ALL COUNTS

1. This is an action for damages in a sum greater than \$15,000.00, exclusive

of interest, taxable costs and attorneys fees.

2. Counter Plaintiff, IVIEWIT.COM, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and the State of California.

3. Counter Plaintiff, IVIEWIT HOLDINGS, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and California.

4. Counter Plaintiff, IVIEWIT TECHNOLOGIES, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and the State of California.

5. IVIEWIT LLC, is a Florida limited liability company, formed by PROSKAUER, which, at all times relevant hereto, was authorized to conduct and conducted business in the Palm Beach County Florida and the State of California.

6. Counter Defendant PROSKAUER ROSE, LLP, (hereinafter "PROSKAUER") is a New York limited partnership, operating a law office in Boca Raton, Palm Beach County, Florida.

Boca Raton, Palm Beach County, Florida.

7. BRIAN G. UTLEY, (hereinafter "UTLEY") was at all times relevant hereto a sui juris resident of the State of Florida and who on or about September of 1999 was the president of Counter Plaintiff, IVIEWIT LLC.

8. CHRISTOPHER WHEELER, (hereinafter "WHEELER") is a sui juris individual and resident of Palm Beach County, Florida, who at all times relevant hereto was a partner of PROSKAUER and who provided legal services to the Counter Plaintiffs.

9. KENNETH RUBENSTEIN, (hereinafter "RUBENSTEIN") is a sui juris individual believed to be a resident of the State of New York and who various times relevant hereto was initially misrepresented by WHEELER as a partner of PROSKAUER and later became a partner of PROSKAUER, and who provided legal services to the Counter Plaintiffs both while at Meltzer, Lippie, et al., and PROSKAUER.

10. RAYMOND JOAO, (hereinafter "JOAO") is a sui juris individual believed to be a resident of the State of New York and who at all times relevant hereto was represented to be RUBENSTEIN's associate at PROSKAUER, when in fact JOAO has never been an employee of PROSKAUER but in fact was an employee of Meltzer, Lippie, et al.

11. That beginning on or about November of 1998, the Counter Plaintiff, IVIEWIT, through its agent and principal, Eliot I. Bernstein ("Bernstein"), held discussions with WHEELER with regard to PROSKAUER providing legal services to the company involving specific technologies developed by Bernstein and two others, which technologies allowed for:

i) Zooming of digital images and video without degradation to the quality of the digital image due to what is commonly referred to as "pixilation";

and,

ii) The delivery of digital video using proprietary scaling techniques;

and,

iii) A combination of the image zoom techniques and video scaling techniques described above; and,

iv) The remote control of video cameras through communications networks.

12. That Bernstein engaged the services of PROSKAUER to provide legal services to the company to be formed, including corporate formation and governance for a single entity and to obtain multiple patents and oversee US and foreign filings for such technologies including the provisional filings for the technologies as described in Paragraph 11 above, the "Technology", and such

other activities as were necessary to protect the intellectual property represented by the Technology.

13. That at the time of the engagement of PROSKAUER, Bernstein was advised and otherwise led to believe that WHEELER was the PROSKAUER partner in charge of the account.

14. Upon information and belief, WHEELER, RUBENSTEIN and JOAO upon viewing the technologies developed by Bernstein, and held by IVIEWIT, realized the significance of the technologies, its various applications to communication networks for distributing video data and images and for existing digital processes, including, but not limited to digital cameras, digital video disks (DVD), digital imaging technologies for medical purposes and digital video, and that WHEELER, RUBENSTEIN and JOAO conspired to undertake and in fact undertook a deliberate course of conduct to deprive Bernstein and IVIEWIT of the beneficial use of such technologies for either the use of third parties, who were other clients of PROSKAUER and WHEELER, or for WHEELER, RUBENSTEIN and JOAO's own financial gain, to the detriment and damage of the Counter Plaintiffs.

15. That WHEELER, who was a close personal friend of UTLEY, recommended to Bernstein and other members of the board of directors of

IVIEWIT that the IVIEWIT engage the services of UTLEY to act as President of the Iviewit.com, LLC based on his knowledge and ability as to technology issues.

16. That at the time that WHEELER made the recommendation of UTLEY to the board of directors, that WHEELER knew that UTLEY was in a dispute with his former employer, Diamond Turf Products and the fact that UTLEY had misappropriated certain patents on hydro-mechanical systems to the detriment of Diamond Turf Products.

17. Additionally, WHEELER was fully aware of the fact that UTLEY was not the highly qualified "engineer" that UTLEY represented himself to be, and that in fact UTLEY lacked real engineering expertise or even an engineering degree and that UTLEY had been fired from Diamond Turf Products due to his misappropriation of patents.

18. That despite such knowledge, WHEELER never mentioned such facts concerning UTLEY to any representative of IVIEWIT and in fact undertook to "sell" UTLEY as a highly qualified candidate who would be the ideal person to undertake day to day operations of IVIEWIT and work on the patents, acting as a qualified engineer.

19. Additionally, WHEELER continued to assist UTLEY in perpetrating such fraud on both the Board of Directors of IVIEWIT and to third parties,

including Wachovia Bank, by approving a false resume for UTLEY to be included in seeking approval of a private placement for IVIEWIT.

20. That based on the recommendations of WHEELER, as partner of PROSKAUER, the board of directors agreed to engage the services of UTLEY as president.

21. That almost immediately after UTLEY's employment and almost one year after initially providing of services, WHEELER provided a retainer agreement for the providing of services by PROSKAUER to IVIEWIT LLC, addressed to UTLEY, a true and correct copy of such retainer agreement (the "Retainer") being attached hereto and made a part hereof as Exhibit "A". That the services provided were in fact to be paid out of the royalties recovered from the use of the Technology, which was to be included in patent pools overseen by RUBENSTEIN.

22. That the Retainer by its terms contemplated the providing of corporate and general legal services to IVIEWIT LLC by PROSKAUER and was endorsed by UTLEY on behalf of IVIEWIT LLC, the Board of Directors of IVIEWIT LLC would not have UTLEY authorized to endorse same as it did not include the intellectual property work which PROSKAUER had already undertaken.

23. That prior to the Retainer, PROSKAUER and WHEELER had provided

legal services to IVIEWIT, including services regarding patent procurement and acted to coordinate such services both internally and with outside counsel, including RUBENSTEIN and JOAO, including times when they were misrepresented as PROSKAUER attorneys.

24. That PROSKAUER billed IVIEWIT for legal services related to corporate, patent, trademark and other work in a sum of approximately \$800,000.00.

25. That PROSKAUER billed IVIEWIT for legal service never performed, double-billed by the use of multiple counsel on the same issue, and systematically overcharged for services provided.

26. That summaries of the billing statements provided by PROSKAUER to IVIEWIT are attached hereto and made a part hereof as Exhibit "B".

27. That based on the over-billing by PROSKAUER, IVIEWIT paid a sum in of approximately \$500,000.00 plus together with a 2.5% interest in IVIEWIT, which sums and interest in IVIEWIT was received and accepted by PROSKAUER.

28. That WHEELER, UTLEY, RUBENSTEIN, JOAO and PROSKAUER, conspired to deprive IVIEWIT of its rights to the technologies developed by Bernstein by:

a) Transferring patents using Foley & Lardner so as to name UTLEY as the sole holder of multiple patents in his individual name and capacity when in fact they were and arose from the technologies developed by Bernstein and others and held by IVIEWIT prior to UTLEY's employment with IVIEWIT, and;

b) Upon discovery of the "lapses" by JOAO, that WHEELER and PROSKAUER referred the patent matters to WILLIAM DICK, of Foley & Lardner, who was also a close personal friend of UTLEY and who had been involved in the diversion of patents to UTLEY at Diamond Turf Products; and,

c) Failing to list proper inventors of the technologies based on improper legal advice that foreign inventors could not be listed until their immigration status was adjusted, resulting in the failure of the patents to include their rightful and lawful inventors and the payment by IVIEWIT for unnecessary immigration work; and,

d) Failing to ensure that the patent applications for the technologies, contained all necessary and pertinent information relevant to the technologies and as required by law; and,

e) Failing to secure trademarks and copyrights and failing to complete trademark and copyright work for the use of proprietary names of IVIEWIT and source code for the Technologies of IVIEWIT as intellectual property, and;

f) Allowing the infringement of patent rights of IVEIWIT and the intellectual property of IVIEWIT by other clients of PROSKAUER and WHEELER, and;

g) Aiding JOAO in filing patents for IVIEWIT intellectual property by intentionally withholding pertinent information from such patents and not filing same timely, so as to allow JOAO to apply for similar patents in his own name, both while acting as counsel for IVIEWIT and subsequently.

29. As a direct and proximate result of the actions of the Counter Defendant, Counter Plaintiffs have been damaged in a sum estimated to be greater than \$10,000,000,000.00, based on projections by Gerald Stanley, CEO of Real 3-D (a consortium of Lockheed, Silicone Graphics and Intel) as to the value of the technologies and their applications to current and future uses together with the loss of funding from Crossbow Ventures as a result of such conduct.

30. All conditions precedent to the bringing of this action have occurred or have been waived or excused.

COUNT I-LEGAL MALPRACTICE

31. This is an action for legal malpractice within the jurisdiction of this court.

32. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

33. PROSKAUER employed by IVIEWIT for purposes of representing IVIEWIT to obtain multiple patents and oversee foreign filings for such technologies including the provisional filings for the technologies as described in Paragraph 11 above.

34. That pursuant to such employment, PROSKAUER owed a duty to ensure that the rights and interests of IVIEWIT were protected.

35. WHEELER, RUBENSTEIN, JOAO and PROSKAUER neglected that reasonable duty of care in the performance of legal services in that they:

a) Failed to take reasonable steps to ensure that the intellectual property of IVIEWIT was protected; and,

b) Failed to complete work regarding copyrights and trademarks; and,

c) Engaged in unnecessary and duplicate corporate and other work resulting in billing for unnecessary legal services believed to be in excess of \$400,000.00; and,

d) By redacting information from the billing statements regarding services provided so to as to give the appearance that the services provided by PROSKAUER were limited in nature, when in fact they involved various aspects of intellectual property protection; and,

e) By knowingly representing and agreeing to accept representation of

clients in conflict with the interests of IVIEWIT, without either consent or waiver by IVIEWIT.

36. That the negligent actions of PROSKAUER and its partners, WHEELER and RUBENSTEIN, resulted in and was the proximate cause of loss to IVIEWIT.

WHEREFORE, Counter Plaintiff demands judgement for damages against Defendant together with reasonable attorneys fees, court costs, interest and such other and further relief as this Court deems just and equitable.

COUNT II- CIVIL CONSPIRACY

37. This is an action for civil conspiracy within the jurisdiction of this court.

38. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

39. Defendant, PROSKAUER and UTLEY, WHEELER, RUBENSTEIN and JOAO, jointly conspired to deprive the Counter Plaintiffs of their rights and interest in the Technology.

40. That UTLEY, WHEELER, RUBENSTEIN, JOAO and PROSKAUER with such intent, directed that certain patent rights be put in the name of UTLEY and/or that such patent rights were modified or negligently pursued so as to fail to provide protection of the intellectual property, resulting in the ability of other clients of WHEELER, RUBENSTEIN, JOAO and PROSKAUER to make use of such

technologies without being liable to IVIEWIT for royalties normally arising from such use.

41. That PROSKAUER, without either consent of the Board of Directors or proper documentation, transferred securities to Tiedemann/Prolow Investment Group, which entity was also referred by WHEELER, who acted as counsel for such unauthorized transaction.

42. That upon the discovery of the above-described events and conspiracy, IVIEWIT's lead investor, Crossbow Ventures, ceased its funding of IVIEWIT.

43. That Crossbow Ventures, which was a referral of WHEELER, took a security interest in the Technology under the guise of protecting IVIEWIT and its shareholders from the actions of UTLEY, based on the filing of an involuntary bankruptcy (which was later withdrawn), and as to WHEELER and PROSKAUER based on the instant law suit, when in fact such conduct was motivated by Crossbow's attempts to wrongfully detain the interests of IVIEWIT in the Technology. Such conduct, upon information and belief, was undertaken with the knowledge and assistance of WHEELER and PROSKAUER.

44. As a direct and proximate result of the conspiracy and acts of PROSKAUER, UTLEY, WHEELER, JOAO and RUBENSTEIN, the Counter Plaintiffs have been damaged.

WHEREFORE, Counter Plaintiffs demand judgement for damages against Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

COUNT III- BREACH OF CONTRACT

45. This is an action for breach of contract within the jurisdiction of this Court.

46. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

47. Defendant, PROSKAUER, breached the contract with Counter Plaintiff, IVIEWIT LLC by failing to provide services billed for pursuant to the billing statements presented to the Counter Plaintiffs and over-billing for services provided.

48. That such actions on the part of PROSKAUER constitute beaches of the contract by and between IVIEWIT LLC and PROSKAUER.

49. That as a direct and proximate result of such conduct on the part of PROSKAUER, IVIEWIT LLC has been damaged by overpayment to PROSKAUER and the failure of PROSKAUER to perform the contracted for legal services.

WHEREFORE, IVIEWIT demands judgement for damages against Counter Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

**COUNT IV- TORTIOUS INTERFERENCE WITH AN ADVANTAGEOUS
BUSINESS RELATIONSHIP**

50. This is an action for tortious interference with an advantageous business relationship within the jurisdiction of this Court.

51. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

52. Counter Plaintiff was engaged in negotiations of technology agreements with both Warner Bros. and AOL/Time Warner as to the possible use of the Technologies of the Counter Plaintiffs and investment in Counter Plaintiffs as a strategic partner.

53. That despite the prior representations of RUBENSTEIN, at a meeting held on or about November 1, 2000, by and between UTLEY, RUBENSTEIN and representatives of Warner Bros. as to the Technology of IVIEWIT and the efficacy, novelty and unique methodology of the Technology, RUBENSTEIN refused to subsequently make the same statements to representatives of AOL and Warner Bros., taking the position that since Warner Bros./AOL is "now a big client of Proskauer, I can't comment on the technologies of Iviewit." or words to that effect in response to inquiry from Warner Brother/AOL's counsel as to the status and condition of the pending patents on the intellectual property.

54. That RUBENSTEIN, having served as an advisor to the Board of Directors for IVIEWIT, was aware of the fact that at the time of the making of the statements set forth in Paragraph 50, above, IVIEWIT was in the midst of negotiations with AOL/Warner Bros. as to the possible funding of the operations of IVIEWIT in and sum of between \$10,000,000.00 and \$20,000,000.00.

55. Further, RUBENSTEIN as a partner of PROSKAUER, and despite his clear prior actions in representing the interests of IVIEWIT, refused to answer questions as to the enforcement of the Technology of IVIEWIT, with the intent and knowledge that such refusal would lead to the cessation of the business relationship by and between IVIEWIT and Warner Bros./AOL and other clients familiar with the Warner Bros./AOL technology group then in negotiations with IVIEWIT, including, but not limited to Sony Corporation, Paramount, MGM and Fox.

56. That the actions of RUBENSTEIN were and constituted an intentional and unjustified interference with the relationship by and between IVIEWIT and Warner Bros./AOL designed to harm such relationship and further motivated by the attempts to "cover-up" the conflict of interest in PROSKAUER's representation of both IVIEWIT and Warner Bros./AOL.

57. That indeed, as a direct and proximate result of the conduct of RUBENSTEIN, Warner Bros./AOL ceased business relations with IVIEWIT to the

damage and detriment of Counter Plaintiffs.

WHEREFORE, Counter Plaintiffs demand judgement for damages against Counter Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

I HEREBY CERTIFY that a true and correct copy of the foregoing has been provided by U.S. Mail and fax transmission this 10th day of January, 2003 to: Christopher W. Prusaski, Esq., Proskauer Rose, LLP, 2255 Glades Road, Suite 340 W, Boca Raton, FL 33431.

VIA MESSENGER

Mr. Gregg W. Ritchie
Pacific Capital Group, Inc.
360 N. Crescent Drive
Beverly Hills, CA 90210

Re: iviewit.com

Dear Gregg:

I very much enjoyed meeting you for lunch earlier this week. As promised, enclosed is a copy of the Business Plan for our client, iviewit.com.

Iviewit has developed two proprietary and complimentary technologies to enhance video and images delivered on the internet. The first is a state-of-the-art technology which enables full-screen, full-frame rate (i.e., 30 frames per second) streaming video to be viewed by any internet video player at bandwidths as low as 150 kbps, with increased quality and reduced file size. The second digital imaging technology creates an opportunity for full screen still images and 360° panoramic views that can be magnified with minimal image distortion.

Iviewit has protected its technologies by filing and securing eight patent pending applications, and is currently buffering and expanding those patents through a significant supplemental filing. Iviewit is represented by several of the most prominent patent law firms and attorneys in the world. Bill Dick, who is the head of the intellectual property department of Foley & Lardner in Milwaukee, Wisconsin, was formerly in charge of IBM's foreign patent division. Mr. Dick and his patent team of attorneys are preparing all of iviewit's supplemental patent filings and are drafting all of iviewit's license agreements. Iviewit's potential patent litigation (if any) will be handled by Ken Rubenstein, who is the head of intellectual property litigation group at the law firm of Proskauer Rose in New York City. Mr. Rubenstein is in charge of all patent litigation on behalf of the MPEG patent pool, in addition to a number of other high-profile technology litigation matters.

Mr. Gregg W. Ritchie

May 19, 2000

Page 2

Iviewit has licensed its technology and providing services to a number of substantial clients, such as hollywood.com, broadway.com, Hyatt Hotels and Resorts, and Great Expectations Dating Service. Iviewit also is in final negotiations to license its technology to playboy.com, medicalonline.com (x-rays, MRI's CT-scans, etc.) americanenterprise.com (multi-hour surgical and educational videos), gregmanningauctions.com (one of the largest auction houses) and many other clients in the entertainment, health care, automotive and other industries.

Iviewit initially raised \$500,000 of seed capital from Wayne Huizenga's venture group (at a \$10 million post-money value). Within the last few months, Iviewit raised \$1.5 million in a Series A round at a \$25 million post-money valuation from an investment group led by several individuals who previously ran Merrill Lynch's venture division. Iviewit is currently seeking an additional \$1-\$2 million in the Series A round, with a Series B round (\$10 million minimum) to follow later this year. The proceeds will be used to provide working capital (including the leasing/purchase of equipment and facilities) which will enable iviewit to fulfill its substantial backlog of orders and to expand its licensing operations. Iviewit is currently in discussions with several of the nation's leading investment banks to lead the Series B fundraising efforts.

The iviewit technology is most easily explained through a demonstration. If Pacific Capital or its Venture Group are interested in learning more about the company, please let me know and I will arrange to have the principals fly to Los Angeles for a meeting. Although you can see some of the company's technology and applications on the website (www.iviewit.com), the highest-quality work is not available for public viewing and is best seen through a private demonstration.

I look forward to hearing from you.

Best regards.

Very truly yours,

Alan J. Epstein

Re: iviewit.com

Dear Kimberly:

Following up on our telephone conversation last week, enclosed is a copy of the Business Plan for our client, iviewit.com.

Iviewit has developed two proprietary and complimentary technologies to enhance video and images delivered on the internet. The first is a state-of-the-art technology which enables full-screen, full-frame rate (i.e., 30 frames per second) streaming video to be viewed by any internet video player at bandwidths as low as 150 kbps, with increased quality and reduced file size. The second digital imaging technology creates an opportunity for full screen still images and 360° panoramic views that can be magnified to the optical limit with minimal image distortion.

Iviewit has protected its technologies by filing and securing eight patent pending applications, and is currently buffering and expanding those patents through a significant supplemental filing. Iviewit is represented by several of the most prominent patent law firms and attorneys in the world. Bill Dick, who is the most senior member of the intellectual property department of Foley & Lardner in Milwaukee, Wisconsin, was formerly in charge of IBM's patent and licensing operations in the Far East and in other territories. Mr. Dick and his patent team of attorneys are preparing all of iviewit's supplemental patent filings and are drafting all of iviewit's license agreements. Iviewit's potential patent litigation (if any) will be handled by Ken Rubenstein, who is the head of intellectual property litigation group at the law firm of Proskauer Rose in New York City. Mr. Rubenstein is in charge of all patent litigation on behalf of the MPEG patent pool, in addition to a number of other high-profile technology litigation matters.

Ms. Kimberly Chu

May 30, 2000

Page 2

Iviewit has licensed its technology and providing services to a number of substantial clients, such as Hollywood.com, Broadway.com, Hyatt Hotels and Resorts, and Great Expectations Dating Service. Iviewit also is in final negotiations to license its technology to Playboy.com, MedicalOnline.com (x-rays, MRI's CT-scans, etc.) AmericanEnterprise.com (multi-hour surgical and educational videos), GregManningAuctions.com (one of the largest auction houses) and many other clients in the entertainment, health care, automotive and other industries.

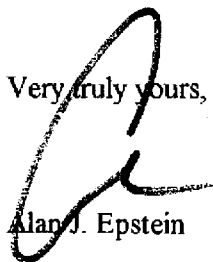

Iviewit initially raised \$500,000 of seed capital from Wayne Huizenga's venture group (at a \$10 million post-money value). Within the last few months, Iviewit raised \$1.5 million in a Series A round at a \$25 million post-money valuation from an investment group led by several individuals who previously ran Merrill Lynch's venture division. Iviewit is currently negotiating with an investment group for an additional \$2 million in the Series A round, with a Series B round (\$10 million minimum) to follow later this year. The proceeds will be used to provide working capital (including the leasing/purchase of equipment and facilities) which will enable iviewit to fulfill its backlog of orders and to expand its licensing operations. Iviewit is currently in discussions with several of the nation's leading investment banks to lead the Series B fundraising efforts.

The iviewit technology is most easily explained through a demonstration. If you or your colleagues at WaterView are interested in learning more about the company in the context of a Series A and/or Series B round investment or a licensing or other strategic relationship, please let me know and I will arrange to have the principals fly to Los Angeles (or New York, if you prefer) for a meeting. Although you can see some of the company's technology and applications on the website (www.iviewit.com), the highest-quality work is not available for public viewing and is best seen through a private demonstration.

I look forward to hearing from you.

Best regards.

Very truly yours,

Alan J. Epstein

Re: iviewit

Dear Christopher:

I would very much appreciate your sending two Confidentiality Agreements to Mr. Gemal Seede, one addressed individually and one to Netcubator, the company which employs him at address below:

Mr. Gemal Seede
Netcubator
30 W. Green Street
Pasadena, California 91105
Facsimile: 626-449-4395

Please send the Confidentiality Agreements directly to Mr. Seede, with a copy to my attention. Also please include in your cover letter a statement, similar to the one set forth in the Confidentiality Agreement you sent to Richard Rossman on April 26th, regarding Proskauer's general views on the novel and protectible nature of the patents and technology.

Very truly yours,

Alan J. Epstein

Gentlemen:

At the request of Alan Epstein, I am forwarding the enclosed Confidentiality Agreements to you. I would appreciate your signing and returning your Agreement to me.

We have undertaken representation of iviewit, Inc. ("iviewit") and are helping them coordinate their corporate and intellectual property matters. In that regard, we have reviewed their technology and procured patent counsel for them. We believe the iviewit technology is far superior to anything presently available with which we are familiar. iviewit has filed a provisional patent application on a method for providing enhanced digital images on telecommunications networks. We are advised by patent counsel that the process appears novel and may be protected by the patent laws. While in all matters of this sort, it is far too early to make any final pronouncements. We do believe that there is an extremely good prospect that iviewit will protect their process which is novel and superior to any other format which we have seen.

Sincerely,

Christopher C. Wheeler

world. Founded in 1875 in New York City, the firm employs 475 attorneys and has wide experience in all areas of practice important to businesses, including corporate finance, mergers and acquisitions, real estate transactions, bankruptcy and reorganizations, taxation, litigation and dispute resolution, intellectual property, and labor and employment law.

Armstrong Hirsch Jackoway Tyerman & Wertheimer, P.C.

One of the nation's leading entertainment law firms. Based in Los Angeles, California, it represents many of the most prominent actors, writers, directors and producers of feature films, television programming and other entertainment content. The firm also represents various content and technology companies in the Internet industry, including prominent web sites, entertainment-oriented portals, aggregated celebrity sites and various e-commerce companies. The firm is assisting in developing the business structure and strategic relationships for iviewit.

Foley & Lardner

One of the oldest and largest law firms in America. Founded in 1842, the firm now has more than 750 attorneys in 14 offices, following the February 1996 merger with Weissburg and Aronson, Inc. Foley & Lardner's over 100 highly skilled intellectual property attorneys constitute one of the largest and most sophisticated technology groups in a general-practice law firm in the United States. As one of the few large national law firms with a global intellectual property law group, it is uniquely positioned to help iviewit capitalize on its foreign filings. The firm's broad-based representations in litigation, regulatory affairs and general business counseling is complemented by one of the world's most highly trained staffs, which includes 65 engineering and advanced technical degrees, including 12 Ph.D.'s. The list of clients using Foley & Lardner to fill their intellectual property legal needs ranges from small entrepreneurial start-up companies to large international and multinational corporations. Foley & Lardner attorneys provide solutions and successfully serve the needs of clients around the world, including those situated in the United States, Canada, Latin America, the European Union, Eastern Europe, the Middle East, and the Pacific Rim.

-
- **William J. Dick** - Special Counsel to the West Palm Beach office of Foley & Lardner. A member of the firm's Intellectual Property Department (Electronics Practice Group), Mr. Dick currently focuses on mentoring other members of the Electronics and Consumer Products Practice Groups in various IP related matters. He also conducts weekly classes in patent related matters for new associates. Mr. Dick joined Foley & Lardner after 26 years with IBM. He began as a patent attorney, and has handled all phases of patent, trademark and copyright duties, including litigation. Mr. Dick's most recent position with IBM was as Assistant General Counsel to IBM Asia Pacific. Mr. Dick is a graduate of the University of Virginia (B.M.E., 1956; L.L.B., 1962 changed to J.D., 1970)
 - **Douglas Boehm** - a partner in the Milwaukee office of Foley & Lardner and a member of the firm's Intellectual Property Department (Consumer & Industrial Products Practice Group and Health Information Technology Practice Group), Mr. Boehm practices in the areas of patent, trademark, copyright, and trade secret counseling; U.S. and foreign patent prosecution; and computer software and intellectual property licensing and technology transfers. Mr. Boehm's technical focus encompasses electrical and electronic engineering, including analog/digital/RF circuitry, radio telecommunications, lasers and fiber optics, and computer hardware and software. He has extensive experience in private industry, having worked as a development engineer and patent agent for Motorola, and as patent counsel for a subsidiary of Amoco Technology Company.

reason that you can recall whatsoever why these
two computers were given the names Nitro and
Bomber?

155

A. Well, at their inception, they were
reasonably current in the state of the art.

Q. Okay. So they were basically quick
and they were high-capacity machines and they
were desirable; is that what they were?

A. Well, let me position that.

Q. Okay.

A. At the time of their inception, they
would be considered to be reasonably current in
the state of the art. But we all know at what
rate the technology moves.

Q. Okay. So about three months after
they were created, they were no longer state of
the art?

A. That's very often the case.

Q. Okay. With regard to William Dick
and Foley & Lardner, do you have any relationship
or continue a relationship with either Foley &
Lardner or Mr. Dick?

A. No.

Q. Have you known Mr. Dick in any other
setting other than related to Iviewit?

A. He worked for me at IBM as manager of the intellectual property department. 156

Q. And is that why -- or strike that. Did you recommend that Mr. Dick be retained for the intellectual property work for Iviewit?

A. Actually, I used Mr. Dick as a reference or a consultant to determine who Iviewit should consider retaining for its intellectual property work.

Q. And Mr. Dick was subsequently, Foley & Lardner and Mr. Dick was subsequently employed for that purpose?

A. Mr. Dick was never employed by Iviewit, but Mr. Dick was retained by Foley & Lardner as a senior staff member because of his broad experience both before the bench and worldwide in intellectual property matters and, and he endorsed Foley & Lardner as a competent intellectual property company that would handle our affairs. I trusted his judgment.

Q. Now, are you aware of any relationship between Iviewit and Real 3D?

A. Real 3D were brought into the picture by Mr. Wheeler. They were a resource by

EXHIBIT "F"

CORRECTED VERSION - CORRECTED ON 5/14/2003
Transcription of Telephone Conference
Conducted July 31, 2000

Participants:

Simon Bernstein, Eliot Bernstein, Maurice Buchsbaum,
Brian Utley, Doug Boehm, Chris Wheeler

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified. Note also that this recording has numerous instances of participants speaking at once or carrying on simultaneous side conversations that make it difficult to follow and transcribe the entire line of discussion.

Utley: <begins midstream>...status of the original digital image filings, and basically the fact that the original filings do not cover the full subject matter of the imaging technology; and to wit, one of the omissions, in particular in reading the claims section of the provisional and the formal filing, relates to the zooming and panning capability that is inherent in the technology. This has become a topic due to the fact that we are currently in the second phase of filing imaging patent protection which is driven by the provisionals that were filed later last year, between August and December of last year. So the concern that were expressed by Eliot in reviewing this is that this omission of the zooming and panning capability was attributable to a failure, for whatever reason, on the part of Ray Joao, the patent attorney of record, in constructing and putting together the provisional and formal filing<tape cuts out here> did I say it is that right Eliot

E Bernstein I believe so

Utley Is that your understanding

E Bernstein Correct

Utley The purpose of this meeting is to review the facts and I think there are two particular points that are ...that are important to moving ahead. The first is: "Given that the filings are what they are, and given what we know about the filing which is scheduled to take place this week on Wednesday, what means do we have to correct the situation; and given whatever corrections we find, what then is the impact or exposure to iviewit based upon what actions we can take. Then, lastly, what, if any, recourse might iviewit have vi sa vi the omissions in the original filings Are there any other issues, Doug?

Bernstein: Yeah, just correcting back to Ray Joao's work of the formal filing that he filed. Do we have a copy of that?

Utley: I do have that.

Bernstein: I don't. I've got the provisional and I've got...

Boehm: Everything is on the table

Utley: you should have...the formal.

Bernstein: This one?

Utley: Yes, that's the formal.

Bernstein: Okay.

Simon Bernstein: I just have one question. Does anybody have, or are we allowed to get, the files of Ray Joao?

Boehm: I have them.

Wheeler: Do you have all of the work that he had?

Bernstein: No, not all of it.

Utley: What was purported to be in the files?

Bernstein: And he also claimed to us that he destroyed part of his files.

Boehm: And I have some of his files. I have what was purported to be all of the firms' files.

<Inaudible comment.>

Utley: Well, there's a whole history, then, because I tried to get complete copies of the files originally, and found out later that not only did he not send us all the files, he didn't even mention that there was an extra filing out there that we didn't even know about.

Bernstein: This one that's in question.

Boehm: Yep

Simon Bernstein: You have no notes, no data on...?

Boehm: No, I have the application. I have things that you could get from the US patent office—that I could get from the US patent office. I have very few notes. I do have some scribbled Ray Joao's notes, but I think you gave me those notes.

Utley: I did. I gave you Bill Dick after Bill yourself[] the notes that I had.

Bernstein: And Ray's made disclosures to us that he destroyed the documents to protect us, which I don't know what he was thinking.

Simon Bernstein: Destroyed what documents?

Bernstein: Whatever he had in his files. Other patent copies, copies of the drafts as they proceeded...all that he destroyed to protect us from something I asked him to explain, and his reasoning...because I said to him, you know, usually you destroy documents when you are protecting somebody from something illegal or something. Have I done something that would force you to hurt me possibly? He said it was typical, normal, that all lawyers destroy their records.

Simon Bernstein: If that, in fact, is the case—I've never heard of a lawyer you know other than Nixon destroying anything the work is ours. Am I right Chris when we pay for a lawyer and we pay for the work, the work is ours.

Wheeler: The work product is yours. He may maintain copies of his files and everything; or his confidential notes to himself are not necessarily yours. But the work "product" is...

Simon Bernstein: Would you say that anything germane to the issue belongs to him?

Wheeler: Well, I mean if he wrote notes...in sidebars...yeah.

Bernstein: How about revised patents[]. How about copies? Works in progress

Wheeler: But things which would reinforce your patent, obviously, that is germane to the strength of your patent yes, you would be entitled to copies I don't think we disagree.

Bernstein: He's claiming He destroyed all faxes.

Wheeler: Can I ask you a question?

Bernstein: Yes.

Wheeler: Just so both of us understand...was this patent done prior to his flying down here, or was this patent done as a result of his flying down here and having discussions with you? I was under the impression that when he flew down here—this was before Brian came—I was under the impression that followed our meeting with Reel 3-D. I was under the impression that he was coming down to discuss, at the very least, the video aspect so that you could complete that; but were you also completing the imaging patent?

Bernstein: Correct.

Wheeler: So he went to your [kitchen]?

Bernstein: Right. And we spent days there

Wheeler: And the two of you spent all the days...

Bernstein: Correct.

Wheeler: And did he, in front of you, write notes?

Bernstein: Tons. Hundreds

Wheeler: And did he then produce them on his computer and type out certain things?

Bernstein: Yes.

Wheeler: I was under the impression he was doing that with you.

Bernstein: He did.

Wheeler: And did you read those?

Bernstein: I did. I did - now going to that same nature, that's the provisional I think we're talking about...

Wheeler: Right.

Bernstein: But he flew out here again with me and Brian and went through this as he went to file this--this is a 3/23/2000 file--that also fails to make mention of.

Wheeler: So that's the formal file...the formal one?

Bernstein: The formal file. So both also missed the point.

Wheeler: I just wanted to know and to put things in proportion, when you read the provisionals, because Brian wasn't with the company right now and then, and when there were all those drafts, because obviously we didn't see them...

Bernstein: Well, you saw because we gave you all the documents. I'd get a document from Ray and bring it to you so you would have records of everything up to that point because I didn't want to keep them at my house.

Wheeler: The final...the final...but I'm not reviewing the patent. I was keep maintaining it as...

Bernstein: Okay, but you have every record...

Wheeler: Everything you gave me we maintain. We don't...

Simon Bernstein: Any notes should be produced...

Wheeler: We don't throw away anything.

Bernstein: Yeah, I know.

Simon Bernstein: I know you don't you're very thorough.

Wheeler: So, I'd file it away; so if you gave it to me, it's in our archives.

Bernstein: Right.

Wheeler: I wanted to know, when you read those drafts...

Bernstein: Oh, it was...it was clear

Wheeler: Answer my question...when you read the drafts, did you see the panning and scanning elements?

Bernstein: Yeah, and zooming, up to 1,000 times we thought it was. That was the big...you know, we had it in there...as a matter of fact, he just said it...somewhere it's in there up to 1,000 times, isn't it?

Utley: 1,700.

Bernstein: Right. That was our old mistaken a number of times. So, yeah, for him to miss that, Chris, would be the essence of stupidity.

Wheeler: So it was in there?

Bernstein: Absolutely.

Utley: The zooming, it was in the body, but not in the claim.

Boehm: But a provisional doesn't really...doesn't have to have claims.

Utley: It doesn't have claims.

Bernstein: But then in our claims of our patent, it's not there. This is what you're representing, correct?

Wheeler: So you're saying that it wasn't put in the file, but it was put in the provisional.

Boehm: No, I could see where he's going to argue that it's there.

Bernstein: Let's see. Let's take a look.

Wheeler: ...what the language of the patent claims are that he filed.

Bernstein: Okay, let's see what he...

Wheeler: And this isn't the final decision because I can go back right now and amend those claims.

Bernstein: Wow, yes, but we have elements of exposure that creep in correct?

Wheeler: I'm just telling you the whole thing, then we'll go back. So you did look it over, and there are no claims in the provisional?

Boehm: There are no claims in a provisional. You can file them, but they are never examined.

Wheeler: But the zooming and the panning and the scanning element was incorporated in that?

Boehm: Go ahead, Brian.

Utley: Let me make sure that we say that properly. The provisional filing had a claims section which migrated into the final filing, but Eliot is correct in saying that the provisional does not need a claims section.

Boehm: The provisional never gets examined, so it doesn't need the claims. It just holds your place in line for one year.

Bernstein: But then when I look through this...

Simon Bernstein: Hold on, Eliot, I need to understand this. What you're saying, then, is assuming any negligence on his part, to that point the negligence doesn't become realistically damaging to the company until since he actually made a claim...since he actually made a provisional filing. Which took our place in line.

Boehm: If the provisional filing covered the invention, your place in line is only as good as the subject matter described in accordance with the law.

Simon: Obviously, it should have had the panning and zooming in there.

Boehm: Well, the word "zoom" is in there.

Bernstein: But not really to describe what we're doing.

Boehm: But do you see what I'm saying? It's only to the amount of subject matter that and attested where the average person skilled in the art could make and use an invention as it's described in this document, and without "undue" experimentation, without inventing it himself.

Simon Bernstein: Right.

Boehm: Now, this provisional application, you throw it...different patent attorneys do different things with it. On one end of the spectrum, you do an invention disclosure. Most big corporations have invention disclosure forms which leads the inventor to write out good disclosures and figures and things, and I've seen people actually file that invention disclosure because if you're coming up on a bar date, you don't have time to write an application or think about what your invention is. All you've got to do is get something on file, and then hope that it will protect...that whatever you had on file covered your invention.

Simon Bernstein: Is that what we've done so far?

Bernstein: No.

Boehm: I don't want to answer that, but that's the line.

Boehm: It's a grey question, it's a grey area, I think.

Wheeler: That's what we're aiming to do, that's what we're hoping to do.

Boehm: But on one end of the spectrum, you file very minimal work, and that's what Ray did on some of the applications, like on the one...

Wheeler: He was trying to do it in a broad...

Wheeler: He did say conceptually that his method was to do a broad stroke of it.

Boehm: Right. Well, a broad stroke on drafting the claims.

Wheeler: Okay. Right.

Eliot Bernstein: He's got to put the invention in!

Boehm: That doesn't happen in a provisional at all, generally. If you want to, you can write the provisional claims just so you know what you're doing, and it's actually used as subject matter; but the claims are never examined. It doesn't matter if it's in proper format or anything, it just sits there. Now, if you pick up the provisional a year later—it has to be within that year—if it's a real well done application, you just file it. There's no money involved in turning the provisional into a regular filing. Oftentimes, with these one-page disclosures, there's a substantial amount of money involved in taking that from there to there. The problem is you cannot add subject matter to the patent application later on once it's filed.

Bernstein: Unless it's really the patent application, correct?

Boehm: No, the subject matter has to be supported—has to be described—

Simon Bernstein: In the provisional.

Boehm: Uhhuh To that text, or you lose your filing date.

Wheeler: But the zooming element, then, is not in addition.

Boehm: Is not in addition? You mean...

E. Bernstein: It's not even in there.

Wheeler: You can't add subject matter. So if he did describe zooming, then it's not in addition.

Bernstein: Did he, ?

Wheeler: I am asking you whether he did or not?

Boehm: I'm not clear on what you mean. You can't add additional subject matter after the filing date of an application or you'll lose the right to that filing date.

Wheeler: The provisional? You can't add subject matter to the provisional?

Boehm: To any application...any patent.

Wheeler: But if he did describe the zooming, then the zooming element is not an addition in the formal.

Boehm: Right. It's supported. If he described it in the original, you can base claims on it later.

Wheeler: And have we said that the zooming is in the provisional?

Bernstein: Nowhere that I can see.

Simon Bernstein: Wait. You're the lawyer reading another lawyer's work. Is it in there?

Boehm: Do you have a copy of it?

Bernstein: Yeah, right here. It isn't in there if it bites you.

E. Bernstein: It's not in the filing either.

Simon Bernstein: It's obviously not in the filing if it's not in the provisional.

Bernstein: No.

Simon Bernstein: Can you make reference to something...let's say he uses the word "zoom".

Boehm: Exactly. I'm pretty sure the word "zoom" is in there, isn't it Eliot?

Bernstein: But what Doug's saying is that had you written the patent, you would have described the invention as the ability to do this cool zoom that we all...and just said this is the cool part of what we're doing. What Ray's missing in the outline is the ability for you to put a picture on a Web page.

Wheeler: He did know that an important element was the fact that when we went in and made it bigger, we didn't pixelate.

Bernstein: It didn't pixelate. Not in here at all.

E. Bernstein: Not even mention to that concept.

Bernstein: Complete failure. It's not.

Wheeler: But if said it doesn't distort when we zoom...

Bernstein: Nope. Nothing like that.

Wheeler: That's the same thing, isn't it?

Bernstein: Yeah, but he hasn't said anything...he doesn't even tell you ...

Wheeler: What about the panning element, or is that element not patentable?

Bernstein: No, that's part of the whole process is to be able to zoom while panning.

Wheeler: Here it is. "The above process can be utilized in order to create higher zoom capabilities with each new depth layer of an image..."

Bernstein: No, but that's a new depth layer which is bringing in another hotspot image, so it's really a completely different subject.

Boehm: Oh. Okay.

Boehm: Okay. Where is that?

E. Bernstein: I read it to, he's very crafty you know.

Boehm: "Where the zoom capacity of up to 1700 times or greater may be easily obtained with the [present conventions.]" Are they talking about the hotspot now?

Bernstein: No.

Boehm: No, it's the general zooming capability.

Wheeler: So it's not in addition.

Bernstein: Well, explain to him where it's missing.

Wheeler: You guys didn't put it in the formal...I don't mean you...he didn't put it in the formal one in the depth in that what we want to do it but he could have without it being construed as an addition.

Boehm: Yes.

Boehm: Well play lawyer on you now<Laughs; cannot understand his comment.>

Wheeler: Right - sorry

Boehm: Whether or not it's supported is a question that's going to be determined either between you and the examiner...probably not, it's between you and another

lawyer someday when the case is litigated. The question is And again, the test is: Can the average person skilled in the art—the average designer of this type of software—can he read this document and make and use of your invention without inventing it? That's the test. Now, whether he uses the word "zoom" in here and "magnification" later, that doesn't mater as long as he would have gotten it. If it is so simple to build by reading this, you don't need any subject matter. If you're combining three elements A, B, and C, and A, B, and C are standard in the art, and you tell them these are standard in the art, go combine A, B, and C, that could be a one-page application. The average person will pick it up and he could. It's a patent test. Are you with me? The more complex it is, the more you want it supported in this text.

Simon Bernstein: What if it is basically simple, and he just wrote it as basically simple, does that support our position anyway though?

Boehm: Does that support our...Sure...

Simon Bernstein: I mean, if we were to litigate against another person that infringes on our...

Boehm: An infringer.

Simon Bernstein: Supportable for the sake of argument?

Boehm: Right. Yes. That is a fair argument

Simon Bernstein: OK so then I don't know that, at least from first blush

Bernstein: That's the provisional you're reading though, right?

Boehm: Aren't they the same? I think they're identical, aren't they?

Boehm: You can check in his notebook.

Boehm: Are there differences?

Bernstein: Where did you find that piece that you just read?

Wheeler: Is the reason...now continue answering my question...is the reason we came to the formal in March of this year, which I didn't realize that Joao. I thought that we had agreements for doing everything, but apparently Joao filed...

Boehm: For that one, yes.

Wheeler: But he didn't bother telling anybody.

Boehm: That's the one that we didn't find out until way late.

Wheeler: Okay, perhaps the reason that he did that was that was the easiest way to do it and the course of least resistance, and he thought he could go back...is there an amendment procedure?

Boehm: Yeah, there's an amendment procedure.

Wheeler: That he could do it a few months later or something like that?

Utley: We had a conversation before the formal filing, and, in fact, I have my notes here from that conversation.

Wheeler: Okay.

Bernstein: And you mentioned that there was no zoom.

Utley: Yeah, I said...

Bernstein: Claim one.

Utley: Yeah, Here are my notes. This is my original copy. Claims do not reference stitching. The patent app does not cover providing enhanced digital image with zoom and pan controls. It covers for creating enhanced images to show zoom and pan functionality without distortion." Those are my notes.

Bernstein: And you told him that.

Simon Bernstein: Here's a man that was cognizant of what was necessary to be in there. How did a guy to file a patent without any of us--obviously, not me, but Eliot, Brian.?

Boehm: Jim wasn't around yet.

Simon Bernstein: Okay, but Chris was and so on and so forth--how did they get through the crack that he did this?

Wheeler: It didn't get through the crack. Brian addressed it with him.

Bernstein: And everything is shredded now, too. Everything else is shredded.

Utley: Kind of what he was going to do--his time factor--he was going to...he didn't think he would get this in. He would submit it and then would turn right around and amend it.

Boehm: Did he really say that?

Bernstein: Yeah.

Utley: I wouldn't say amended, it was because of the stuff that was coming...

Bernstein: It was supposed to be in there.

Utley: ...he was going to smash that all together and file it.

Simon Bernstein: Was that the same time, Brian, that he was leaving the firm?

Bernstein: Yeah.

Simon Bernstein: So would you say that probably...

Utley: he knew at the time that he probably would be leaving?

Utley: Right.

Simon: But he wanted to get all of this in place so he could do the billing and get that part of it in...

Utley: I don't know that.

Boehm: Just speculating.

Eliot Bernstein: What day did you give him those notes?

Simon Bernstein: I don't ever have to speculate on billing

Utley: I don't have my address book with me...I didn't write the date down, but it was the date that he was here. He came.

Wheeler: He wanted to get it done to take care of you, make sure it was filed for you.

Simon Bernstein: That could be too. One other reason is...

Wheeler: We're just speculating.

Wheeler: And I'm not trying to... <Everyone talking at once.> I thought he was trying to work on our best behalf, but one time or two times that I met him, it seems like he was earnestly trying to help. Who knows? Maybe he was incompetent. I mean we're only suggesting that it would have been incompetence

Bernstein: Well, the fact that it's not in your patents, right up front, this is the invention, is a gross neglect. And the fact that it doesn't say, "this is what the invention is trying to do. This is the feature..."

Simon Bernstein: The point is not whether it's gross neglect or not, it's what the damage is if there is...if, one, gross neglect is of any import; and two, what is the damage? it has caused iviewit. That's what I think we need to ascertain here, and if we can ascertain it.

Utley: How do we fix it?

Simon Bernstein: Of course lets try to fix it, if we can't fix it then we'll worry about...

Eliot Bernstein: Well 1st- lets fix it

<Everyone talking at once.>

Boehm: Let me go over the procedures so everybody's clear. Again, on one end of the spectrum you file a very sparse, like a one-page provisional application, and it's cheap, and the purpose of the provisional is to get you in line...it is to protect your date. What you're trying to do is get the benefit of your priority date. When you invented it. When you're in line in terms of whose the next guy that invented it. Whose the first inventor?

Simon Bernstein: Someone comes after you the second day after...

Boehm: Who's the first inventor, that's what you're after.

Simon: I understand. I really understand...you don't physically stand...

Boehm: Not physically in line in the patent office is right, not or even in physically in line in order as well. Okay. One-year letter, the provisional expires and you have to file a non-provisional patent application, okay? Many times it's identical. If you do a good job up front, you just file that, but you need to put claims on at this time. When I do a provisional, I try, if there is money and time up front, to do it once up front. I even write the claims. As a matter of fact, I don't even like to file provisionals because there's not much of an advantage. If you've got the time and the money up front to do a good job, well then, just file it as a regular application.

Simon: Understand that at the beginning, the time and the money...I mean, the time was certainly available, but the money was a short substance. So it was obvious that Ray would be working in a most expeditious way.

Boehm: Well, that's why the..

Simon: Which might have short-circuited us because of all of the lack of funds.

Wheeler: Well, that's true because the filing date is 3/24/99 to endorse that...that was very early in the game.

Simon: We did it in your office Chris in your library...in your conference room. The only meeting I had with him was while we were going to file the patent and that was in your office.

Boehm: Okay, 3/24/99 is the provisional application.

Bernstein: That's what I'm saying. Well, Chris,

Boehm: So even at a year, he filed the second one with claims.

Buchsbaum: Yeah two things happened during the year. One, the Company was doing other things, even though they knew that was coming up, and two, I guess there wasn't a whole lot of money to allocate towards doing that much.

Simon: Here's what we did. We hired Ray Joao on the monies that were raised by the investors; and then when Huizenga was coming in with their money, and when that money came in, we made a company decision that the first and foremost thing was to get the patent filed properly. So the fact that we were going to spend more money and get them completed at that point had already been made.

Simon: Okay, but prior to that, we were working on short forms. Then after that, we started to raise capital, and we always knew that the priority was intellectual property, so were going to make sure that those got done right. Brian's been working on it ever since, and I felt comfortable...I never did feel comfortable with Ray Joao...just an observation.

Boehm: Hmm...is it all patent attorneys? <Laughter>

Simon: No, no, there's nothing wrong. He came in, he's a nice guy, he tried hard, you know, all the nice things, but his work always appeared sloppy, okay? And that's the only thing I can say. You're a patent attorney, you see what he did. If I'm wrong, then let me know; but to me, it looked like it was a little slipshod. And then he made some statements that really bothered me, too, that I don't think he should have made to a client, and that is that he was filing his own patent. <Chuckling.> I mean, horseshit personally, I haven't heard of a patent attorney in my life telling me that he's an inventor filing his own patent. It really did bother me.

<Everyone talking at once.>

Bernstein: Transmitting video files on a communication network for airlines and...

Simon: It probably meant nothing because I don't think the guy was of the nature to be stealing from us, but I don't know! But I'll tell you this, it did ring a bell. From a pure novice, it made me a little nervous. I asked Eliot why he was dealing with somebody, but we were assured that this was a good firm...

Boehm: Let me look back in my own spiel...here with the provisional. You file a provisional, then within one year, you file a regular application with the claims. You can add claims to it; but if you add subject matter to it—in other words, if the zoom and pan concept wasn't well described, you have lost the benefit of that first phase. Right. Now

why is that going to hurt you? Two main reasons. One is if you put it on sale—offered it for sale— or you publicly disclosed it, there are certain regulations that say you've got to get something on file, so if you had publicly disclosed it, that would protect...getting the application on file will protect you from losing your date because of public disclosure and offer for sale. I think that's what he was trying to get the earlier dates for.

Simon: Sure.

Boehm: I spoke with Ray when I was trying to get all of these files, and his comments to me were...when we were on the phone—you remember, we were asking him where was this stuff, and he said, well, he kept building on and he learned more it got in there. After I reviewed these applications, I agree that you're learning more as you go along. I'm doing the same thing. So it's kind of a learning curve.

Bernstein: If they ever find a zoom description that adequately makes...especially in the claims...I mean, if you're reading the claims...

Boehm: But Eliot, he's going to say that the claims are of no import right now. All you have to do...

Bernstein: In the filings?

Boehm: In the filings. I can go amend those right now. We can sit down today and re-write them.

Simon: If it can be amended amend it. There's no problems.

Boehm: There's no problems.

Simon Bernstein: There's always maybe a little money that's been duplicated and that's it.

Boehm: Here's the problem, and that's what I want to get across about that. If he's trying to claim zoom and pan and I rewrite the claims to claim zoom and pan, and the examiner says, that's great, but it's new matter

Bernstein: But it's in the provisional that you can zoom up to 1700 times.

Boehm: If my claim is supported by the spec on that date, then you're fine.

Bernstein: Isn't it?

Boehm: I can't answer that without going into the...

Bernstein: But when we read the provisional and we see that, it says...

Simon Bernstein: Before this meeting took place, before we called this meeting, aren't you privy to everything that's been done?

Boehm: Oh, sure. I have everything.

Simon Bernstein: So when Eliot asked you that question, why can't you answer it?

Boehm: Because there's no...in my opinion, there's no clear-cut answer, yes or no, on the quality of the work product. It's a judgment call.

Bernstein: So that's an exposure, and what if the judgment is against us?

Wheeler: It's [an examiner] judgment call is what we're saying.

Boehm: The damage?

Wheeler: No, the examiner. <Everyone talking at once.>

Wheeler: Whether the subject matter is new or not.

Boehm: The examiner would...hold on...it's...

Wheeler: whose judgment call is it?

Boehm: It could be the examiner's, if he catches it. If it's not caught, and you get it to patent and you litigate the patent, ... at court. Or if the examiner catches it and I want to appeal it to the board of appeals in the patent office, it's their judgment call

Wheeler: Okay, so we go to court and we're fighting over the patent, we would argue that it's supported by the zoom 1700 in our language, and the other side would, say that's baloney that's too broad you didn't describe it enough

Boehm: You didn't have your invention...

Bernstein: Then you lose.

Boehm: We would lose only if you had a bar date come in there if somebody else invented before you, or if you put something on sale...or if we offered something up for sale.

Bernstein: Which we did.

Boehm: But the offer-for-sale date from our first meeting is not until September.

Bernstein: Right.

Boehm: So the offers for sale won't normally kick off a foreign...

Simon Bernstein: Could you explain to me what offer for sale means?

Boehm: Sure. As soon as you...you can't get a patent on a product after you've been using it for more than a year. As soon as you publicly disclose your invention, you've got one year in the United States to get a patent on file, okay? Even if you don't publicly disclose it...let's say I've got a method of making [] in my factory, but it never gets outside. I'm starting to commercialize it, I'm making money off my invention...the commercialization date a year later is you can't patent it in the U.S. So that's that one-year grace period.

Simon Bernstein: Aren't we within that period?

Boehm: Yes. As far as we know, yeah. As far as we know.

Utley: Yes--yes we are within that grace period

Simon: Okay, somebody explain to me, what am I doing here? Why am I sitting here? Are we saying that Ray Joao, other than being sloppy, but there's not much damage that could have been done or can be done because we can fix it, which really would make me the happiest to hear that.

[not in transcript: PSL look at change above although minor it indicates perhaps the change in text to match new text]

Utley: Can I jump in? Let's just say there are two steps. We're going to make a filing this week; and to the best of our knowledge, we have swept up all this in this filing, and that will be within the commercialization period. The second thing that we're going to do is we're going to look at filing an addendum to the original formal filing to strengthen the claims - broaden the claims ... to the maximum extent that we can.

Boehm: if we need it...if we need it.

Boehm: It'll be a lot of this was swept up into the application.

Utley: What we're trying to do is protect the date day of March 24

Boehm: The original...

Utley: The original date as March the 24th, but filing should remain an objective.

Simon Bernstein: Brian, if you broadened the language now, would that be a red flag to the commissioner that you should have done it earlier? Or should we just say that this has always been there?

Buchsbaum: You mean the examiner of the commission

Bernstein: We're not going to be able to say it was in the claim.

Simon Bernstein: What happens when you start those amendments or broaden them is you start to admit that you didn't do it.

Boehm: Um, yes and no. We...I do that all the time.

Simon Bernstein: It's common then?

Bernstein: If they do it all the time, then we have to do it.

Simon Bernstein: But not until I feel more comfortable with it.

Boehm: We normally have a search done. The patent examiner will do a patentability search, and he will come back and reject it. The problem is if the claims are too narrow to begin with, he will not come back and reject it, he'll allow it, and boom! Now I can't amend it he's in. [], we're done. But I can file an continuation on it. I can keep dragging this out and get broader claims as long as the subject matter is...

Wheeler: So that's why he stated it broadly versus narrowly?

Boehm: No.

<Somebody comes into the room to take food/and or drink orders.>

Boehm: No, but as far as, doing it broadly, if you're saying to claim it broadly it's our job to claim... as prior art which I doubt the claim is as broad as the [] allows...

Wheeler: Right. That's what I'm saying.

Boehm: And this is claimed broadly.

Wheeler: Right.

Boehm: And that's the normal tactic, to claim things broadly, and then wait for the examiner to come back and say, "Oh, you can't get it that broad," and then narrow down your claim.

Wheeler: Okay, so isn't that what he was in part trying to do? That's what he's been saying, yeah.

Boehm: Yeah.

Wheeler: Well, would that not be consistent with how patent attorneys try to do things?

Bernstein: Well, claim one, if you look at their claim one, Chris, that they've written, it identifies...

Wheeler: Who's they?

Bernstein: Foley & Lardner. It identifies what you're trying to do.
[not in transcript: Stephen note how Dicks name is deleted and Foley's name is screwed up, may indicate who was changing this transcript]

Wheeler: Okay, so maybe it should have been written differently.

Boehm: You won't get two patent attorneys to write the same claims.

Bernstein: Well, no, but you try to write the claim, and that's the teaching you and Steve both represented us here, to describe in its broadest term...

Boehm: Right.

Bernstein: ...the invention.

Boehm: Well, I can't say that this isn't broad. This is very broad. This might be rejected for indefiniteness...I don't know what it is...but now he's got the opportunity to go back and...

Bernstein: And Brian, you know, there's print film image in here, it's all supposed to be out of here.

Wheeler: What you're telling me is that in your forum of law there's always going back and refining and refining and refining that was wrong.
<Everyone talking at once; two different conversations going on at once.>

Bernstein: This is like he just completely ignored what we said over a year. He didn't do a thing. Nothing. No comments, nothing.

Utley: Almost nothing between the provisional and the formal process.

Boehm: And some people intentionally file narrow just to get something on file. Then they can come back and repair it without damage to it.

Bernstein: But you don't know that because an examiner...

Simon Bernstein: You'll never know that until you have a litigation.

Bernstein: And then the question is what potential damage does that...

Simon: That damage potential and that remedy will be then taking place at that time, not now.

Boehm: That I agree with. Even if we decide something now, you won't know what the outcome is for five and a half months.

Simon Bernstein: ...wouldn't happen anyway. You wouldn't even know that.

Utley: Let me come back where I was. We are going to file on the 7th, Wednesday. As far as we know, that will cover every element of this invention that we have our arms around at this point in time.

Boehm: I believe so, yes.

Utley: And we should go back and address what amendments we can make to the claims in the filing of March this year and determine within the spec of the filing how broad those claims can be. I mean, that's going to be the test. Within the spec of that filing, how much leverage have we got to broaden those claims so that we do have a priority date which is back about a year ago last March.

Bernstein: So we want to insert everything going into this one into that one?

Utley: No, it'll be...

Utley: It'll be based upon the preamble, if you will, of what's in here.

Boehm: We do reference it. As a matter of fact, this is the cover page, Brian, of the application we're going to file.

Utley: Yeah, you reference it right there.

Bernstein: But you can add claims to that one that you're referencing that would encompass what we have in today's filing, which is really...we do want it in there.

Boehm: Yes, I can claims to the zoom and pan to get you back to the original date in this one since I claim to this onto his.

Bernstein: Well, we should do both.

Boehm: Well, you can't get two patents on the same invention, so it depends on where we want to go.

Bernstein: Well, we want to definitely get it in on his because it gets us an earlier date. Correct?

Boehm: No. It's a mess with these dates. What will happen is...nobody will worry about the date unless there's an occurrence, and that occurrence might... it's a major problem. You won't find out about that occurrence until you sue somebody, and then they go search in Australia, and they find a reference that somebody's done this before in the library, and then you worry about the date. Were you before him?

Bernstein: Well, that's what I'm worried about. I'd like to go back to our earliest date.

Wheeler: Can I point out one other thing? I know we look for the word...Eliot looks for the word...I know we look for the word "zoom," but there's also other language in here too. Sometimes we get caught up in a word "zoom," when what is zooming other than enlarging or reducing? And he does have language in here, "when enlarged or reduced, these pixels of the digital image becoming distorted a feature which

typically results in the digital image being fixed to an original size or being available at low magnification, such as, for example, magnification from 200 to 300 times. These digital images are also difficult to enlarge to a full screen without a tremendous amount of distortion present in the end product."

Wheeler: I mean, he's describing I mean that's zooming. Reducing and enlarging is zooming.

Bernstein: But he's not putting it in your claims, that's what he's saying. You see, this is different.

Boehm: But it doesn't matter right now

Wheeler: But it doesn't have to be if you've made mention. The opinion is that it doesn't have to be as long as he's ...if you made mention...if you've gone on record of having described this

Boehm: This is the background that's...problem. He's got...

Boehm: That kind of invention, right, it's got to state...

Wheeler: Well, I didn't get to that either.

Bernstein: Right. And that's where it's not.

Boehm: I pointed out a couple of things. It's not as...

Bernstein: Within the claims, the claims I'm reading, you could not...

Boehm: The claims really don't matter.

Bernstein: In the patent?

Boehm: The patent claims on a pending application basically don't matter.

Bernstein: No, the ones he filed.

Boehm: Yeah, they basically don't matter. I can go back and change them.

Bernstein: Okay. Why? So we want to change back to the original one he's filed, put as much language as we can that we have today...oh, it's all supported. Everything you wrote in that new one is supported in this one because it's the same process.

Boehm: That's the ultimate problem that Steve and I—Steve is Becker, the other patent attorney that actually wrote these patents <in audible>—but that's the ultimate problem that we're worried about, and that's the problem that you always worry about unless you first of all have a handle on the invention, inside and outside, and second of all, unless you really have a handle on Prior Art so you know where you

want to go with this. Then you spend the time and the money to do a good original provisional filing. You've got a pretty good shot that it's supported then. But when you file as, oh, I've got to try and cover this base, and when you do this kind of stuff, there's always going to be a question of what was supported when.

Bernstein: But that's fine. It is supported.

Simon Bernstein: We're off the subject matter.

Bernstein: So we should definitely claim back to the earlier date?

Boehm: We may get a rejection, or you may find out in litigation five years from now, that none of this was supported. Some court may say that you never talked how to do this because your software wasn't in the patent application.

Bernstein: It is, though.

Boehm: Well, the code isn't. They might say that these broad diagrams and these flowcharts aren't good enough. There's always that risk.

Bernstein: But we're trying to say that if they accept it, we want it to be to the furthest filing date that we can, which is March 3, 2000, and that's where it should lie; and if it's going to get argued let it live or die at that date.

Boehm: That's what we're trying to do right now.

Bernstein: Okay, good. So I'm under the impression from this point that we're going to encompass what we've learned what we're filing even in this other one even into the original one so we can claim back to a March 3 filing date that claims back to our original March patent...

Boehm: March 24th, yeah, all of that will go back toward what is supported in here, in the original. Not supported in ours.

Bernstein: Okay. And it's all going to be supportable because you're going to be able to pull up an image of the nature that we are discussing, and anybody with an eye can see that you've now done this.

Boehm: <Inaudible comment.>

Bernstein: Well, you're going to be able to show your invention, aren't you?

Boehm: No, no.

Bernstein: You can't?

Boehm: You live or die on what's in the specs. That's why...

Bernstein: Then get it in there.

Boehm: Yeah.

Bernstein: You can't bring it in as evidence what the invention is?

Boehm: Only outside evidence of what the average level of skill in the art is, okay? If somebody says that the flowchart isn't detailed enough, I'm going to go, "Oh, yes it is. Here's 29 programmers who are going to testify and say yeah, I can do that in my sleep with this document." So, there's always going to be a battle about the level of support.

Simon: Maurice and I—that's why I asked him to come in—Maurice and I were talking because neither one of us understands patents or how you file them or invention actually. What we do understand a little bit about is the theory in business; and now that we know that Ray Joao was somewhat sloppy—I'm not suggesting that he's not a fine attorney or anything else—you have been...you have reviewed all these patents that we have, whether there are eight or ten of them...

Boehm: There were eight original filings, and then...eight original filings.

Utley: Okay. And then how many do we have now?

Boehm: Let's look at the chart right now, but it's basically. We've got 17 applications that have been filed. These old ones are dead now because they were provisionals, and we've basically covered all...we pointed out basically covering two, maybe three inventions, so there's not...I mean, if we were to start over, maybe you'd do this with two patents, maybe one patent. So.

Simon Bernstein: Who owns them?

Boehm: Who owns it? iviewit Holdings, Inc.

Utley: Owns all of them?

Boehm: Except for...<Pause, and then text comes in that doesn't seem to be answering this open question.>

? Video playback over a network

Wheeler: How did he get in? [not in transcript but this refers to Jeff Friedstein on an invention]

Bernstein: He's part of the invention.

Boehm: An inventor - inventorship.

Boehm: So I've so I've got a document right here for him to sign. If he signs, then I do a couple of things.

Bernstein: He signed that when you faxed it to him originally.

Wheeler: I have copies of each one of these. Can I get a copy of your []?

Boehm: of this? Sure.

Wheeler: I have a copy of each one of these, I believe, or most of them...

Buchsbaum: Can I ask you a question? Your saying everybody that has an obligation to sign is on the list of names in these patents?

Boehm: You preferably don't...well, unless you have the new ones...

Wheeler: I don't have the new ones, but...

Bernstein: That's an old one. That's old.

Buchsbaum: You're saying everybody that has an obligation to sign is on the list of names in these patents right, because the company was part because the Company was doing, is that what you're saying? Because I don't even know if everybody has signed because you may due corporate due diligence for financial reasons or if...and they will say has everybody signed off on these patents, and if three people don't...if one person hasn't, he has an obligation to sign?

Boehm: Brian, have you signed?

Buchsbaum: Has everybody signed off on these? Brian?

Boehm: See these tabs [refers to tabs for inventors Bernstein, Shirajee, Friedstein and Rosario to sign] right here? That's what I'm trying to do today. As soon as...I'm going to have people sign, me sign...all the inventors sign. I've got to get a hold of Jeff

Bernstein: I thought we did that when we filed.

Boehm: You only signed one real document, didn't you? Did you actually a declaration? I know you didn't sign an assignment over but you're real clean on it because these are all based on the original filing , which is assigned to iviewit holding already

Bernstein: What's that mean?

Boehm: So all of the other inventors would have a helluva problem trying to say they owned anything.

Simon: Again, this is a little off the subject matter, but I have asked Chris about it before. If something were to happen to iviewit, and it were it went into bankruptcy, what would happen to those patents? How would those patents []?

Wheeler: It depends on which at iviewit you're talking about.

Simon Bernstein: The one that they are held in.

Wheeler: Well, first of all, holdings is held separately versus...we're operating the company out of a separate entity, correct? iviewit.com. So, let me think there...

Buchsbaum: The operating company is iviewit.com.

Simon Bernstein: All I'm concerned about is, for example, that the largest creditor...it wouldn't be a creditor, it would actually be an investor...would then...

Bernstein: They're not a creditor.

Buchsbaum: Okay, then the largest creditor could come in and pierce the corporate veil of iviewit.com and say that this is just a way of protecting the only valuable asset of the company away from creditors. Is there a possibility of that?

Boehm: Obviously there is.

Wheeler: There is a possibility, but that's one of the main reasons... But the loan, they made the company who wrote the patent, join in as a guarantor anyway on it.

Bernstein: Well, that would be all of us. All of those would be all of the investors getting a piece back?

Wheeler: No, no, no. On the \$800,000 loan, those people, it's secured by the patent.

Simon Bernstein: What about the \$600,000...or the other \$800,000 loan?

Wheeler: The others weren't loans. The others were equity, as I recall.

Simon Bernstein: No, no, they have claims.

Bernstein: Well, they're supposed to be converted to equity, which is another issue.

Utley: But there where note holders

Wheeler: No, because there was no quid pro quo at that time. The note holders I mean you can't go back and do it, we had that talk Si

Wheeler: I mean, you can't go back...

Bernstein: The note? I believe they're not final, even though we told people they would be by this time.

Wheeler: The note holders took their money in without taking security. Now you...<Indecipherable. Everyone talking at once.> ...new considerations...I said now you can't ... back to a failure to the corporation

Simon Bernstein: ...Board if everybody that was a creditor found, everybody that was a note holder at that point there was no what would you call it - problem

Buchsbaum: and that would be protected by the courts anyway usually. The court would see this probably as a you know a fraud

Wheeler: You could have two frauds: fraud of creditors and fraud of shareholders.

Simon: No, Chris I'm not worried about fraud. I'm really concerned with the fact that what we did here, the last loan that we took in, from...

Bernstein: Crossbow.

Simon: No, not from Crossbar...

Bernstein: Crossbow.

Wheeler: Crossbow

Simon: ...is secured by the...

Wheeler: ...the term of the deal, right.

Simon: And that's perfectly acceptable to me except that everybody else that had loans prior to that at that time should have been considered with the same equity because ...posses able and Chris told me that that was the perfect time to get it done

Bernstein: Yeah, but would Huizenga lose his?

Bernstein: Would Huizenga lose his stake in it to Crossbow?

Wheeler: No, no, no, it wasn't...I said that if there was going to be new considerations from those people, we all could of...??

Simon: We all could have put in another \$10. I mean, at the time we did it with Crossbow, we should have made sure that our other people...

Bernstein: Are protected.

Utley: No, no, no. We would have had to issue new contracts out for everyone.

Wheeler: There would have had to have been some material consideration, not just \$10. It would have been...

Simon: So it would have been \$10,000...

Wheeler: Well, then, you could have...Crossbow, we didn't even talk about Crossbow at that moment, and I said you couldn't go back and just collateralize. You couldn't go back for money that you already put in. But if you put in new

considerations that you could demand as a condition to be collateral.

Simon: What we should have done, or what we maybe we still should do to protect our original group of investors, is to have them pony up a few more thousand or whatever you think is legitimate, and amend the contracts to protect them as well.

Utley: That's new subject matter.

Simon: Well, I only brought it up because it had to do with the patents.

Utley: I know but can we finish the patent discussions before we bring up new subject matter.

Simon: You can, but I want to make sure that we do finish.

Utley: No, I agree with you Si.

Si: The problem is that I made claims to certain people like Don Kane, who put up \$100,000, who thinks...

Bernstein: Let's get back to that. No, let's get back to it. It's a definite point. There are people.

Buchsbaum: This is a business issue for later.

Bernstein: No, we're asked by these very people these questions.

Boehm: Did you get your question answered on the...

Buchsbaum: Yeah, I just wanted to understand...you know, I got an answer. It had to do with the obligations Si I was trying to understand if somebody does due diligence now with regards to understanding what is there and what has to be done, like those yellow tabs. [Yellow tabs indicate signatures of missing inventors]

Boehm: Yeah, but after...I find everybody, we can get guys to sign.

Buchsbaum: We aren't that many. I don't know on that sheet what you have, but I don't think there are that many names. There's what about five names?

Buchsbaum: There aren't that many...you don't have that many. I don't know on that sheet you have, I don't think there's that many names.

Boehm: No, there's not.

Boehm: So we have everybody but Jeff, if we can get Jude and Zak.

Buchsbaum: You just have to get people around and sign.

Boehm: No, that should not be and issue.

Buchsbaum: That might be questions brought up when people do do due diligence. Is everybody else on these?

Bernstein: That's why we're closing it. Right?

Boehm: We'll record what was in the patent office(...???) can do.

Utley: The other piece that's not in any part of the original filings, which is the reduction of the technology to a disciplined process—the mathematical representations of what's in and how it works and stuff like that.

Wheeler: (...???)

Buchsbaum: That will also be included in there, right?

Utley: We'll put it in the new filing...one of the new filings.

Wheeler: I form my opinion of everything, and we can talk about post solutions but I think Brian wants to get this back on track, but to me there's bad news and there's good news in this. The bad news is, just like anything in life, perhaps we would have liked to have tidied up some things better, like to have had Mr. Joao tidy them up. The good news is considering the state that the corporation was in in the early stages and the variable limited resources that it had, I'm glad that we have an awful lot on record that we do have on record, to be honest with you.

Simon: As long as it's not to the detriment of what we thought we were filing, I have no...I couldn't agree with you more.

Wheeler: But I think I like your approach, and I assume it's your approach, too, in that I assume that you're doing a fairly comprehensive new one, but then you're going to probably...

Utley: Claim priority back to the old one.

Wheeler: Right, but you're also going to do your amendment because now we're finding out that it's not an uncommon procedure and it's not a red flag.

Utley: Two things: the new filing on Wednesday will claim priority all the way back for as much as possible back to March 24th last year. Second, we will look at the March 24th year 2000 filing and determine how we should amend that to include additional claims and broaden that filing so that it more fully represents the knowledge of the invention as of that time.

Bernstein: Does it claim all the way back?

Wheeler: It'll go all the way back...

Boehm: as long as you don't go outside what was described.

Bernstein: No, the math is just describing the original invention.

Boehm: We'll, I'll never know the answer to that until it's litigated.

Utley: Due diligence.

Bernstein: Right, but from your perspective here, that's what we're setting up. Correct?

Boehm: We're going to try.

Bernstein: Okay.

Boehm: The question never even gets answered half the time in the real world. I will claim priority back on the document, and then if the examiner doesn't care, nobody cares

Bernstein: It gets through.

Boehm: It gets through.

Wheeler: Would it be a fair assessment—I'm posing this more as a novice, not as an attorney here—since we're not at IBM and we don't sit down at the very beginning and work out all these equations and all that, that in an invention such as this by a Ma-and-Pa type of inventor, and now since we're getting into the nuts and bolts and really uncovering, in essence, what's behind it, as Brian dissected it as we moved along, but that's all we're doing? I mean, that Ma-and-Pa inventors do that as they go along? They add the flesh to the bones as they go along?

Boehm: Boy, that happens, and we try not...we try to minimize the amount because if the flesh that you have to add is new subject matter and you've already sold your invention a year ago, you're dead.

Wheeler: Well no, Let me at it a different way. It does this, but I can't describe how it does this. But now we find out...we tell you what it does, now we're telling you in detail how it does it.

Boehm: Yeah, in terms of we claimed it properly.

Wheeler: So I'm not adding flesh in defense...

Simon: New flesh.

Wheeler: ...new flesh. I've got the box, now I'm disclosing what's in the box including the gears and how it works.

Bernstein: No.

Utley: No. Here's what the big difference is. The original filing claims a process for print film imaging.

Bernstein: Well, that was all stricken, by the way. That's why I'm having a big problem. I was going to get to that next, Brian.

Utley: Okay, good.

Bernstein: But we have discussed with Ray Joao numerous times to take out the references to print images out of this right here. Over the course of the year in the 59,000 modifications back and forth, we continuously pushed him away from the words that I see in this filing, and that's what's so disturbing to me because we sat here when...

<End Side 1; begin Side 2>

Buchsbaum: That would be conditional, probably.

Simon: Right, they probably will.

Wheeler: Their not going to want in fact their going to say take it off aren't they

Utley: No Crossbow notes would be converted to equity when someone else comes in.

Si? Of course, and that's gone. And those issues are gone.

Wheeler: Well, Yeah, so that it was the ...it was intelligent way to do it...and I'm not...

Buchsbaum: Crossbow would probably manage the million dollars anyway

Wheeler: By the way, if we did do a deal by which we tried to collateralize it even further, then we'd have to have some sort of provisions as well to get rid of your collateral.

Simon: Yes, of course. As soon as it converts to equity, it's gone.

Wheeler: But I mean, what if you didn't convert yours to equity[]?

Simon: Then you'd have to lose it anyway.

Wheeler: But at a point.

Utley: It just becomes a normal stockholder...

Simon: Right.

Wheeler: It would have to drop away or something. For instance, it would drop away when theirs drops away.

Utley: The stockholders, in the event of a default, the stockholders, the distribution that takes place, includes all the stockholders according to the rank of the preference. So the preferred get first cut, and the common stockholders get the second cut, whatever is left for

distribution. But of that amount[] unless there's nothing to distribute.

Simon: Not if one of the preferred stockholders has a collateralized position and the others don't. If one of these preferred stockholders...

Utley: There's no stockholders that have a collateralized position.

Simon: That's true.

Buchsbaum: You're talking about the small amount of money, that have any value, it should be reasonable value, and those would be taken out anyway.

Simon: Except that we seem to feel that we have an obligation to those, to protect the other stockholders who...had all good...I think its prudent anybody to ask permission

Buchsbaum: A good way to do it is the way he said to do it, and that's to [?].

Utley: Will you look it up and see what it's going to take to do it?

Wheeler: I'll coordinate that

Utley: I'm not clear. What are we trying to do? Are we trying to provide for collateral for new money coming in, or are we trying to...? We're not trying to collateralize money which has already been...

Simon: I don't know. Can you handle the old money the same way? I don't think so.

Wheeler: We have to see. We might be able to consider it for the full amount in the view of the fact that if you had enough substantial new consideration, ...

Buchsbaum: The problem is that you may have to go back to Crossbow to do that, and you may be better off just to do it on subsequent money.

Simon: Well, but to ask Don Kane to put up \$10,000 when he's got \$160,000 in the...\$135,000 in the company, and then he only gets 10%...\$10,000 worth of consideration...I'd like to protect his whole \$165,000, which is what he has.

Buchsbaum: The answer is you go back and ...

Utley: I don't think you can do that because that's equity. It's in common stock.

Bernstein: It's not equity. It's a loan.

Bernstein: Don had the stock prior to his putting up the money. These are loans. There's \$400,000 that's on the books. Then there's another \$100,000 besides what he put in originally. Sal has a loan on the books of \$25,000. Your guy should have had a loan on the books for \$250,000.

Utley: No, that's equity. Okay.

Simon: At any rate, <tape cuts out[tape does not cut out on my tape]>...While I got Chris here I'm going to take advantage of his being here.

Simon: One of the issues we tried to do when we raised the last \$80,000 that came from Eliot's two friends Anderson and Mitch Welsch. []

Bernstein: Ken Anderson.

Simon: It was my knowledge, according to Jerry, that those monies were to go to Eliot, and then Eliot was theoretically to loan the money to the company so that Eliot would have a loan on the books and he would have sold his stock because Eliot has some personal needs that he needs to accomplish as soon as we get funded or we get some money in here. I'm under the understanding again. It could be way off.

Bernstein: How do we work that out, Brian? The 10? A loan?

Utley: Yeah, that's better because otherwise you will get taxed.

Bernstein: Will they loan me \$10,000 to pay the taxes?

Simon: Who loaned you?

Bernstein: The company just today?

Utley: So I took that as a loan?

Utley: Yes.

Bernstein: The money went to the company, which spent the money already—the stock money—from Ken and Mitch.

Simon: You haven't sold any of your stock?

Bernstein: No.

Simon: You just made an officer's loan.

Wheeler: Right.

Simon: Is that how you handle it?

Simon: You loan the loan back by some method at some point.

Bernstein: Right. Correct.

Buchsbaum: That's the way to do that?

Utley: Well, there's no tax impact...

Simon: but he would have had a [] gain.

Bernstein: Right. And there were other things at the time...right, things. At the time, the company needed the money and I didn't...not that I didn't

Simon: Sure, I just wanted to make sure that it was done. I didn't even know ...???that bank account

Bernstein: Not that I didn't.

Simon: Let's finish up.

Utley: Eliot, let me summarize. I want to make sure we have an agreement of this meeting. Let me interject two final two points that we kind of skimmed over. One is you said that we want to go ahead and change the claims to go all the way back on this US, but we have sort of got covered on the one we're filing? The one we're filing is a PCT. It won't pop to the US for 18 or 30 months. Or we could file another PCT and a US, then the claims would hit the US. In other words what I'm saying is it would matter if we do the claims here. We could either fix up the claims here or file a PCT and a parallel US if you want US patent protection sooner. The PCT will split out to US, but not until later. You can file a US anytime...

Simon: Let me ask you. You're not a lawyer, what do you recommend?

Boehm: Well, it's more money up front.

Simon: How much money? A great sum of money?

Boehm: No, it's another grand to file.

Simon: For what we've spent already, let's do it.

Bernstein: And that protects us better?

Boehm: Quicker. You'll get a quicker US patent. It'll get you in line quicker.

Utley: The other point that you're making because in this week's filing we are going to claim all the way back...

Boehm: We're going to claim all the way back but this is what is supported

Utley: Right. So if we claim all the way back to March of last year, do we need to touch the filing that's already in motion?

Boehm: The one that's out there?

Utley: Yes the PCT. Do we need to touch that?

Boehm: No, no. There's a PCT and a US.

Utley: Right.

Boehm: The PCT, we will get a search back. In fact, we should get it in a month or so, and then you'll decide what you want to do with that, what foreign country and possibly the US, but he files the same thing basically in the US, and now it's in line in the US.

Utley: Right, right. But what I'm saying is if the new filing that we make this week creates priority all the way back and embraces all of the teachings of the prior...

Boehm: Zoom and pan stuff.

Utley: Zoom and pan stuff, filings, do we need to go and modify and update and amend those earlier filings?

Boehm: Those other two.

Buchsbaum: That's a good question would there be new recommendation?

Boehm: It depends on two things. One is how quickly do you want to get the US for the new filing? This is a PCT that we're preparing right now. If we file the US right away with it, then it makes less difference.

Bernstein: Less?

Boehm: Less difference because he's in line sooner. That's all. It just depends on how soon you want to get your patent.

Bernstein: Well, we want to go for the sooner.

Utley: The sooner the better.

Boehm: The sooner the better then let me play with this

Bernstein: Right.

Boehm: Plus you're gonna get an office action back from the patent office on him...

Bernstein: On that.

Boehm: For free. There's nothing involved.

Bernstein: Right, but it doesn't claim anything.

Boehm: I don't know yet. It claims...he'll get this blasted. It will will be rejected.

Bernstein: Yeah.

Boehm: It will be rejected. The question is do we want to fix this, or where are we with the other things? So there's no decisions to be made now on this, it's just that do you want to file a US and a PCT?

Utley: The answers yes

Boehm Yes

Bernstein: And we do want to fix the original work?

Boehm: We can decide that later.

Bernstein: Well, why would we leave it unfixed?

Boehm: Because you can't get two patents on the same thing. So if we fix this, you're not going to get it over here.

Bernstein: But then we lose the date.

Buchsbaum: No we don't.

Simon: That's what he's saying.

Buchsbaum: You really don't lose the date.

Wheeler: So were not going to...???

Utley: Because he's claiming all the way back.

Boehm: We may not. It depends on...

Bernstein: May and less, these are words that scare me.

Boehm: You don't like that, do you?

Bernstein: No, I do not.

Boehm: But I don't think this is the right time to make that decision now.

Utley: What is the right time?

Boehm: When we get some office action back on this patent. And when we hear from the patent office, we'll sit down say do we want to fix this, or do we want to fix this, or have we uncovered some killer Prior Art that blows this whole thing out of the water? You don't want to spend money right now if you can avoid it.

Wheeler: We've never done a search, have we?

Boehm: We did a search...I've done a search on...<Everyone talking at once.> on a dozen patents that really weren't on point. We didn't find any close Prior Art; and all I can tell these...

Wheeler: This was on imaging and video?

Boehm: Yeah.

Wheeler: That's incredible.

Buchsbaum: Yeah, it was huge.

Bernstein: If it is found impossible to do these things, why would people be doing them?

Boehm: I want to make...the tape recorders off, right? <Recorder turned off>

Buchsbaum: What does PCT mean?

Boehm: Patent Cooperation Treaty. It's a formal filing process for filing foreign patents.

Buchsbaum: Oh, that's the thing with the different countries?

Boehm: Yeah. So we file one application that splits out later to different countries.

Buchsbaum: Two years?

Boehm: Yes, but we'll get indicators before that. Our search comes in nine months, which is three months from now for the first one. But, Brian, they're searching this claim; this claim is crap. You're not going to get a good search on it.

Buchsbaum: So what? In six months or nine months, we'll start hearing from them?

Boehm: Yeah.

Bernstein: Well then we should do an alternate search on what you have.

Boehm: It's a judgment call. I mean, you asked me this question a while ago, and you said what would it take to get me comfortable because I'm kind of a pessimist and I'm an engineer, so I have that background where I look at it that it's half empty. It would take more searching, and it would take more searching inside the technical articles. And it would take quite a bit of work. I mean, I guess \$5,000, I don't know. It depends on what happens. Then, again, that will only raise you to a different level of comfort, that's all.

Bernstein: And then they'll say the same thing, and for another five grand, well get Rays to another indiscriminate level of comfort.

Boehm: Exactly. But we don't have to do that because we will be getting an article...

Bernstein: Right, from the searches.

Boehm: And from your investors because if I was working for them...

Buchsbaum: Let me put it another way. If you have somebody that will take this company and auction off the technology, okay? As it is existing...as it is unfolding, okay? And as the licenses come along. It's strategy. Some of these people bid on that. What are they really bidding on? It's potentials, right? Basically?

Boehm: Well, no, there's a present value of the technology. If you...

Buchsbaum: Well, not if you don't have patents issued on it.

Boehm: Well, sure there is. Sure there is. If he can get a royalty based on 2% of their products--or whatever it is--per minute, whether or not it is patented, absolutely.

Buchsbaum: My question is at what point does it become...is the efficacy there significantly enough from the standpoint of others now that would be doing their own review. You know, like, say a firm that would do the option. They'd have their patent lawyers take a look at what you're doing to see if they think it has a real good value. At what point does that come along? Is it six or nine months from now, basically? Is that when that probably would start to unfold as far as having a real relevant potential value? I've been trying to get a general..

Boehm: I understand your question. I guess I would answer...

Buchsbaum: General idea.

Boehm: If your licensees are spending a lot of money...

Buchsbaum: On your technology.

Boehm: On your technology, they're going to have their patent attorneys right now, today, go do a search, and they will have a good indication. They may come up with Prior Art that blows you out of the water. They may find nothing. They may not search it. They may say, we don't care about patents; it's the technology.

Buchsbaum: Reality, though, this is not the...more likely six to nine months as some licenses start to unfold here and as things start to come back, and that's when this thing will start to have some relevance more than it does right now? From the standpoint of the...

Boehm: That the patent will have relevance?

Buchsbaum: No, no. The technology has a value that can be created in the marketplace and turned to bidding.

Wheeler: Well, you can look at the technology as almost value added to the company. I mean, the company has worth because of the process and what we can provide and we can build it up. But it'll even astronomical more worth assuming that we have...that it's totally proprietary to ourselves. Now some companies have great technology that's proprietary to themselves, and it doesn't earn them money. For instance, Wang Laboratories went down the tubes. They had the best word processing, and they had the best of everything else. And, of course, a lot of their technology is licensed out there, as I understand it, to VisionAire and to...they did the true ones, and...

Buchsbaum: It's was also to get to the possible strategy for the company's investors, okay?

Utley: Right.

Buchsbaum: Or it may be at some point a window of huge value placed on this technology where you may take advantage of it.

Wheeler: Well, and to our investors, we have said, and we can continue to say, we are attempting to create a pool of intellectual property and protect it.

Buchsbaum: Okay.

Wheeler: But there can be no assurances that this will withstand the test of time.

Boehm: That is exactly it. And you never want even when it issues. You will get a good comfort level when you have a US patent issued in your hands.

Bernstein: Why?

Boehm: Because you've had an examination.

Buchsbaum: Because you've got some review.

Boehm: Because you have a presumption of validity.

Bernstein: That's why I'd like to get that first one corrected because that's the first one that's going to be examined.

Boehm: No, we've got one...oh, yeah, it is. It's the US.

Bernstein: And therefore I want that to be approved. The investors are going to say...

Buchsbaum: The first one that we're going to be issued will be issued in May.

Bernstein: And the investors are going to say what happened to patent one.

Boehm: 3/10 of 2000 was when it was filed. Typically a year...they'll get around to it within a year. Maybe it'll issue in. 18 months to two years

Buchsbaum: From right now or from then?

Boehm: From 3/10.

Bernstein: What is the process speed up? If you can show...

Boehm: If you can show somebody's infringing, you can have an expedited examination; but that doesn't always buy you much time, and you really have to get into the patent office the first time, and I'm not sure we can do that.

Wheeler: Wouldn't a good example of one way be that Apple had really great patents, and Microsoft was still able to come in and duplicate it, even though everyone knows they violated the hell out of the patent of Apple.

Boehm: Um, hum.

Wheeler: So I mean you could have a good patent and it could still go down the tubes. But another one I'm thinking of that did stand up was Polaroid had patents and Kodak tried to come in and do everything to distinguish, and wasn't able to and got clobbered, right? And there's probably a lot of every variation in between.

Boehm: Yeah. Wheeler: [Not in transcript this is strange here]

Wheeler: Are those the two extremes?

Boehm: Yeah,

Wheeler: those would be the two extremes.

Utley: Especially when it comes to method patents and software patents.

Wheeler: Yeah, what was the first thing that Brian

Boehm: ...and the more patents you have, the less chances. It's like putting out mine fields...less chances people to get around you. But if the original concept is broad enough and claimed right, Yeah, we can be okay.

Boehm: But what, the test - I guess what you're asking for is when we have that first claim promised, probably within two years of when you filed, which is March 10, 2000, I would probably say

Utley Doug come back, close it out again.
<Inaudible comment.>

Boehm: There were two points. One was the PCT and I got that in correct.

Buchsbaum: Right.

Boehm: The second point was everybody was saying you don't destroy documents. Lawyers do destroy documents; and in the patent realm, it is common practice to get rid of all of our attorney notes, but it depends on what the practice is in your law firm and your corporation. Most patent attorneys who use this practice that I've seen, it happens after it issues. You never do it before. I don't even like to do it then. I like to do it after all the...

Bernstein: I don't even understand why you're destroying it. If you've got nothing to hide and everything's on the up-and-up.

Boehm: But throw in the concept that I'm leaving the law firm. Let's say I'm leaving the law firm, my notes, who's going to follow up and destroy my notes to benefit you, because I do want them six months from now. Maybe that's what he's doing.

Wheeler: Yeah, he could have done it to protect you. He didn't want them around in the other office.

Bernstein: I don't know. I don't know. I don't even know if he knew he was leaving then.

Boehm: Now it's intentional!

Utley: But I want to comeback were going to file PCT and US on the new one. We're going to wait for the old one to get kicked back; and when it gets kicked back by the examiners, we'll then determine how we want to amend it. Is that what you said?

Boehm: No, I want to say something on that again. I think if you want a patent to pop quickly—if that's the goal, which sounds like it's a good goal—then, no, I think we should amend the claims with a preliminary amendment before the examination.

Utley: A preliminary amendment?

Boehm: A preliminary amendment.

Bernstein: Encompassing everything we can throw in there?

Boehm: Yeah, whatever support there is. But a preliminary amendment on whatever it is on the...

Bernstein: So we're going back to the original

Boehm: So I'll fix the 119 case yeah

Bernstein: March 3, 2000, to encompass what we've embraced.

Utley: When will you be in a position to recommend what that amendment will look like?

Bernstein: It should look a lot like the one we just did.

Boehm: Yeah, that's...

Bernstein: That's my guess.

Utley: When will you be in a position to...

Boehm: I'd have to...a few days...

Utley: About a week or so?

Boehm: Oh, Yeah, within a week, sure.

Bernstein: Okay. That's good.

<End of meeting.>

Transcription of Telephone Conference
Conducted August 2, 2000
Participants:
Eliot Participant, Jim Armstrong,
Brian Utley, Doug Boehm
Docket 57103-120

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified.

Bernstein: Patent meeting.

Utley: ...all [it?] is is a set-top box doing that same function. It acts as a scan converter so that you can display on a raster display device as a pixel-based image.

Bernstein Armstrong: Okay. I wanted to start out by just making that comment because I think as we go through this, we just need to be sensitive to how it's stated so that in certain areas we make sure that it's stated in the way that Brian just indicated.

Boehm: Let's talk about that a little bit more up front here. Brian, can you give me...when you say a display is displayed as a raster, not pixels, a TV display versus a monitor? Or both?

Utley: Both. They operate at different frequencies, they have different scanned characteristics; but basically, they are quite similar. In fact, the very early monitors were TV screens.

Boehm: The reason we focused on pixels is because we needed to draw a line in the sand where we said something went [eeky].

Utley: The technology is pixel based. There isn't any question about that.

Boehm: He's right. I mean, pixels, schmixels. Is there any other way to draw that line in the sand and just use pixels as one embodiment; and is there a way to define the way you would pre-pack an image when it's going to be displayed on a display in terms of raster? Or anything else that you can think of. What we're doing is pre-packing sufficient information so that no two picture elements, whatever the heck they are, are displaying the same piece of information. Right?

Utley: Right. Of course, the trap is as soon as you get into the digital world, you are basically in a bit image format unless you use a more complex method which basically is you describe...

Boehm: Which is vector based, you mean?

Utley: Which is vector based where you describe line segments as vectors, but that's very, very, very much more complex and it does not lend itself at all to this kind of imagery that we're dealing with here. It just doesn't work.

Boehm: And it wouldn't pixelate, obviously, when you magnify it.

Utley: We'd have other problems.

Boehm: But you'd have other problems, right. But we're not worried about covering vector-based systems in this invention right now.

Bernstein: But should we limit ourselves...but we don't limit ourselves, either, do we?

Boehm: I'm thinking that a court could hold that you are, yeah, because we're talking pixels all over the place. We've defined some of the claims in terms of how to draw that line in the sand in terms of number of pixels versus

what's displayed versus what's pre-packed in; and maybe the whole string of claims wouldn't make sense unless you were talking in terms of pixels or picture elements. Maybe we don't have the word "pixel" in every claim, but my point is that...

Armstrong Bernstein: Is there any way to do it vector based?

Boehm: Yeah, there are generic ways...we'll, I'm not sure you want to do it vector based because now we can't draw the line in the sand.

Bernstein: Okay. I was thinking a separate filing if there was a way.

Boehm: Yeah, but I'm thinking of...you brought up a good point. We're thinking pixels or a digitized image. Technically, a photograph is grains.

Utley: Right.

Boehm: Is there a grain-based quality factor that we can tap onto?

Utley: No, not really. I think the closest...the part of that that [varies] is when you do the enlargement of the source photo image.

Boehm: Maybe we should talk data elements. Is there a...

Bernstein: That's the word I liked versus this...value data, additional data.

Boehm: But this is not...in the product, there is a big difference.

Utley: But because there's a big [batch] of formulas, you can't...<unclear; everyone talking at once.>

Bernstein: I understand that, I understand that.

Armstrong: But we could use data elements with pixels being an exemplary method for using data elements...here's one example of a data element, it's a pixel.

Boehm: The problem with that, though, is somebody could find a piece of Prior Art that uses the data for vector based.

Bernstein: Oh, [then we are beat] on vector base?

Boehm: No, if it's Prior Art...if it's done ten years ago...vector based...and you're saying in your spec that your claim language data elements cover is broad enough to cover pixel, vector based, and everything. Your claim now reads on the Prior Art, and your patent would be invalid. It could be interpreted that way.

Bernstein: Brian, were we ever able to do it vector based?

Utley: Well, there are certain things which you can do vector based.

Bernstein: That you can't do pixel based?

Utley: That you can do pixel based as well as vector based.

Bernstein: So we've got to be careful that they can't cross that same line.

Utley: Certain kind of graphics are done in vector based. For instance, AUTOCAD works on a vector-based system. CAD programs are typically vector based.

Boehm: Does the concept of your invention, of pre-packing the number of picture elements so you can zoom it and pan it, does that have anything to do with vector-based systems?

Armstrong Utley: No.

Utley: I think, Doug, it really doesn't. Vector-based systems don't play here, and I don't think the data elements buy you a thing.

Boehm: I think it could buy you trouble.

Bernstein: Okay.

Boehm: A good point in trying to broaden it, and we'll keep that in mind...

Bernstein: My question is, so does this cover if you could do it on a TV for a set-top box?

Boehm: I thought it did until...

Bernstein: That's what I was after. I didn't know if a pixel was involved in a TV.

Utley: Not in a direct sense.

Bernstein: In the display sense, though?

Utley: No.

Bernstein: Because we make a distinction between...

Armstrong: <Inaudible comment.>

Utley: But I told you that. But you do

Bernstein: Then were covered

Utley: Yeah...everything is carried up to a scan convertor which is simply a translation medium to translate from pixels into a raster.

Bernstein: Gotcha. Okay.

Utley: So you can display all of that on a laptop, and then it's direct mapping, pixel to pixel.

Bernstein: Or you can convert it to whatever you want.

Utley: Right. That's right. You can convert it to a NTSC or [PAL] or C-CAM or...HDTV

Bernstein: Or any display.

Bernstein: What about a game? What about a game are we set up to cover a game.

Utley: Yeah

Armstrong: I think if we look through this, You said that it need's to be...

Utley: Any kind of display device...

Armstrong: In it's invention, it's a calculation based on pixels, and we just need to be careful that the way this is worded doesn't preclude us from displaying it on a non-pixel-based system.

Bernstein: And that's what he just said. He said that...

Armstrong: He said we're converting the wordage here because we ran into it a number of times. As we all look at it together, let's just be cognizant of that.

Boehm: Absolutely. When we go through, we'll all keep an eye out for it. But when you say a non-pixel-based system is a raster system, I really don't agree with that. A raster is derived from the picture elements, right?

Bernstein: From the pixels. That's what Brian just said.

Boehm: Yeah.

Bernstein: So we can convert the pixels to any display medium we want.

Boehm: Yeah, but even if you look at the...when we get to some of the claims, when you look at the resolution of the monitors, they talk about pixels.

Bernstein: Well, that's what I'm concerned about a little bit.

Utley: Because what they're referencing when they talk about pixels on the monitor, they're really referencing the scan buffer that scans it out to the monitor, and it's not a representation inherently within the monitor itself.

Boehm: Oh, okay.

Utley: The monitor has no pixels. But the monitor has a [shatter vast] which, depending on the monitor technology, whether it's a Sony or a non-Sony—a Sony has an aperture grill—but they have a three-color dot matrix which has no direct connection with a bitmap.

Boehm: Oh, really? No association to the pixel elements coming in?

Utley: No, none whatsoever. A standard TV tube...a 17" TV tube has a dot-spacing at a [4.?] [4.?] inches, and a good display tube has got a lot of the diodes at .26, .27, .28 at the higher resolution, but it's where it's visually higher resolution, not necessarily what your scan buffer has.

Boehm: You don't turn the screen...the gun on and off for each pixel.

Utley: Right. It's a continuous beam scan, and you're modulating the beam.

Boehm: So I think the best we can do is keep that in mind when we talk about the language to converting this over to television display stuff[].

Utley: Yeah, on this page I did have an additional comment. On line 18 and 19, where it talks about ideal image quality requiring a minimum bandwidth for transmission. All I was saying here is instead of a limited bandwidth, it works regardless of the bandwidth, but it has less demand on bandwidth.

Boehm: Okay.

Bernstein: Let me ask you this. Let's say [Take bandwidth out of the equation and just say you play our image off your hard drive. It's still cool, so it has all the features we're patenting. Why do I even care about a limited bandwidth? Why do I care that that statement be there at all?

Boehm: Do you have any knowledge...I mean, ...

Bernstein: No, I have no knowledge that in Prior Art you can pull off your hard drive any differently. People did not say to me, "oh, what you did is cool because you can play it over a network." They said, "it's cool, so I'm gonna play it off my hard drive." And by the way, in the end, the file is on your hard drive. Even if you had a 2400-baud modem, the only difference is you have to wait 11 minutes to get the cool image. The coolness did not decrease by the time it took to download the image.

Boehm: Okay, again, we'll keep that in mind. I believe it's covered when we claim the digital image file because I don't think the digital image file claims pertain to a network. Let me...

Bernstein: None of it should pertain to a network really. It's an added benefit that we're able to transmit these rich pictures over a limited bandwidth network, but it is nothing even close to dependent or part of the coolness of the invention.

Boehm: Can I take a counter-position, Eliot?

Bernstein: Sure.

Boehm: The reason that you'd want...first of all, you have to describe the best mode of your invention. There's no question we have to leave network in there.

Bernstein: That's fine. Okay.

Boehm: And the more stuff you leave in there, the better it is for us.

Bernstein: As long as we're not limited to it.

Boehm: The claims are what defines what's limited, but again, if we are so broad brush in...the claims are interpreted in the language in this...

Bernstein: Well, don't be broad here. If you want to be broad, it can be your hard drive or it could be over a network, it doesn't matter.

Boehm: Right. The problem would be if the digital file that we're claiming in some claim #29 or whatever, if the wording of that claim says "uploading"...no, it says "transferring data," and that would mean over an Internet, and in the spec we come back and say that means over the Internet or...

Bernstein: ..or your hard drive, yes, I agree. That's why I put in some places upload, download. I don't care what you call it, don't limit as to download what I see in some places.

Boehm: Okay, that patent issue is three years down the road you sue your closest competitor. They had a guy that just came out of the print industry, and they have been downloading images in print off of hard drives for photo-processing applications for the past twenty years. He comes out with one article. Your claim directly reads on it because it's off the hard drive now because you have interpreted that claim to mean off a network. Your claim is dead.

Bernstein: No, but that's not...

Boehm: Then you run to claim two, which is dependent on one, which is going to say, by the way, it's over a network.

Bernstein: But it doesn't have to be.

Boehm: Claim two will have to say that, yeah, because otherwise your patent will fall, Eliot.

Bernstein: Why?

Boehm: What?

Bernstein: What my question is...

Boehm: Why will it fall?

Bernstein: Let's stick to the invention.

Utley: What he's saying is...let me see if I can...claim one is as broad as possible. Now, if something happens to lay[] on claim one in the Prior Art, you bypass that by going to claim two, which reads on claim one, which further defines claim one, which takes you out of the concept situation and into [cleaner].

Boehm: Right. You've narrowed the scope of your part of this technology world—the part that's protected—but you want to make sure that part is over what your business is.

Bernstein: Well, my business is...you see, my business doesn't need to involve a network. I could send somebody a CD of their hotel properties, like Hyatt, and say, "Here, you still have all the cool effects of my digital imaging products..."

Utley: But claim one doesn't say anything about networks.

Bernstein: Okay. That's all I'm saying, Brian. As long as you're not limiting me to a network.

Utley: Claim one doesn't. We used that deliberately.

Bernstein: Okay.

Utley: I'm going to talk about that again when we get to the claims.

Boehm: Let's talk about that when we get there, but again, my point is is you've got to be careful about what you say in the spec because the way claims are

interpreted is by referring to the spec. When you say "providing a digital image file," that doesn't mean much in the claim. The guy's going to go read the spec, see how you did it, look at your figures, and that's how this language is going to be interpreted. There's no broad brush back there. And you say, "oh, well it means everything," now claim one means everything, it reads on all the old prior art.

Bernstein: But it does, Doug, mean the hard drive, the CD...

Armstrong: Let me suggest something else. Let me suggest that what we're really saying, whether it's over a network or off the hard drive, is that the unique nature of our process results in high-quality images at low-file size, and so whether that low-file size...

Utley: <Inaudible comment.>

Boehm: Well, it's not file size.

Armstrong: Right. It could be huge files.

Bernstein: It could be huge files...

Armstrong: Hold on. Isn't it true that it is a low-file size given the amount of information that you're able to draw from it?

Bernstein: No, it's the large-file size. It's the opposite. You gave them more data. The file size is not relevant, nor is the bandwidth. That is a must-understand. This idea is cool whether it's played off your hard drive, played off the CD, played off the tape back-up, whatever you want to call it, over a network...whether you Fed-ex, this, Doug, because its the same effect whether you send it over the Internet, and that effect is the same as if it is a 2400-baud modem receiving it or a super-high-speed, as if the only difference between Fed-ex and the Pony Express is three days' wait, but you still are going to have this same package.

Utley: Right. But what you want to do in your claim is make sure that you're not...

Bernstein: Limited.

Utley: No, make sure that you haven't stated your claim so broadly that what is over here excludes your ability to claim over here. So you parse the claims, one very broadly, and then you keep narrowing it down so that if something happened over here, you've got...the network delivers it to you.

Bernstein: Okay. And if you're saying that limited bandwidth isn't in claim one, then we don't care.

Utley: Right.

Bernstein: But I just wonder why it needs to be here other than to describe what we did. You don't, by the way, need a network to describe what we did.

Utley: So we can strike network. We don't have to.

Boehm: Well, we're not striking it. We can take it from the claims when we get there, but I've got to leave it in as your preferred embodiment. That's important.

Utley: Right. We're on page one.

Bernstein: Why? Let me ask you why.

Boehm: Okay, there's something called the best mode...

Bernstein: Okay, let me explain that to you because I do understand that. The best mode of this invention stops as soon as you have the image, whether you ever sent it or not, or played it on your computer for that matter.

Boehm: Okay, Eliot, I don't think you would want to stick to that statement. You're saying right now that your invention is so bloody broad that if somebody had done this before on CDs but never done it on the Internet, and we can go sue them because they're now doing it on the Internet and your claim is valid, and when you interpret your claim to read "on the Internet," and

that's all you ever care about, but now we're going to get you up on the...

Bernstein: That's not all I ever care about.

Boehm: You care about stopping your competitors.

Bernstein: No, but I care about putting it on CDs and all those kind of things or using it for any other application. That's the key here, Doug...the file creation--the concept, the invention--stops before it ever hits the network.

Armstrong: What Eliot's really saying is that our invention does not include a delivery system.

Boehm: Right. So in one embodiment, it would. If you wanted to put a picture claim on your business, it's going to be one of our claims that includes a network, that includes pixels, that includes...I want a pixel claim...

Bernstein: That can include.

Boehm: Pardon?

Bernstein: That can include as one of the methods of delivery, but the delivery method could be a network, a hard drive, a CD-ROM, etc. As long as you cover all that, I'm fine.

Boehm: Okay, what I think we're arguing about is the mine field. You want a claim that's broad enough that if it gets blown away, okay it gets blown away; but I want a claim that's narrow enough that there's a less chance of it being blown away by Prior Art sneaking out of the woodwork because we're not experts in this field like Chris Taylor or something that could say, "Oh, you can't do that...here's a reference." That's why I'm a little...

Bernstein: Can't we say that that's an added benefit of what we've done? I mean, I don't want to be confined to a network, that's for certain.

Utley: You're not.

Boehm: Okay. In one claim, you're not; in another claim, I want you to be.

Bernstein: Okay, that's great. That's what I'm saying. AS long as you've got me covered on CDs or DVDs--somewhere in the future--that's fine.

Boehm: Okay.

Bernstein: Um, page 1.

Utley: In fact...I just want to cap this conversation. When you go through the methodology of the creation of the image and the display of the image and the formulas, there's nothing about a network.

Bernstein: Nothing.

Utley: Okay. So all of that gives you total freedom to claim wherever you want to place that...whatever environment you want to place that. I did have a thought, Doug, on the display and a way to kind of be a little bit more embracing.

Boehm: Than pixel based you mean?

Utley: Yeah, instead of saying display monitor, we just say display system, and display system can be defined as anything with a visual user interface, be it a TV or...

Boehm: That sounds...where is that?

Utley: Page 2, line 6, is the first one. It says "display monitor." If we just say "display system" wherever we have "display monitor"...

Boehm: Okay, not everywhere. This is the background. We're not really talking about our invention yet. The first time we talk about display is describing figure

1, which is element 3, is the display, so that's where we'll stick in it's the display...just the word "display."

Utley: Okay.

Bernstein: Yeah, system. Right.

Boehm: So, let's hold that in abeyance.

Bernstein: I had a comment on line 15: "Improved resolution for zooming and/or panning within a single image."

Boehm: This is the field of the invention. That's fine if you want to say that. All this paragraph does is points the examiner in the right art for the search.

Bernstein: Okay, and I would just clarify, too, on that, it's a single image, not a bunch image—the zooming and everything. This is one file that has all these attributes.

Boehm: Right. So it's "and..."

Bernstein: It can be additional files added into it, but those files retain the single image.

Utley: As long as it's understood that a single image embraces fixed images.

Boehm: How about a single window?

Bernstein: How about a single file?

Armstrong: That's probably good.

Bernstein: That's the right terminology.

Armstrong: Line 22 seems to me to be an incomplete sentence.

Utley: It is.

Armstrong: It should say, "It is known that one can view a digital image on a display."

Utley: That's what we talked about yesterday, Doug.

Boehm: Yeah.

Utley: And you had terminology for that.

Boehm: Yeah, let me find that. I know I do, but apparently it's not that handy where did it go. Yeah, here. We're talking about in the Prior Art it is known.

Utley: Right.

Boehm: And that's the concept. I can fix that sentence by saying...

Bernstein: That "one can" instead of "two."

Boehm: <Speaking as he writes.> "It is known that one can view a digital image on the display screen..."

Bernstein: In other words, it is known in Prior Art or whatever.

Boehm: How about "It is previously known that..."?

Bernstein: Yeah.

Boehm: Okay. "It is known."

Armstrong: "It is known." Period. Previously or now. "It is known that one can view..."

Boehm: "...one can view a digital image..." and get rid of two..."and zoom and pan within that image." Right?

Utley: Uh, huh.

Boehm: Boy, at this rate this is going to be a long conversation.

Bernstein: Yeah, it is because we go now to the next page, too, thank God, and where it's circled pixels, let's just be clear.

Boehm: I'm sorry, I've got to back up. "The limited bandwidth network," how are we changing that?

Utley: We're going to remove that.

Boehm: We're going to get rid of what?

Bernstein: Well, you don't need it.

Armstrong: Delivered through its display system. "The viewer desires ideal image quality delivered to his display system."

Boehm: Okay.

Utley: And then you can go on. "In a network environment..."

Bernstein: This is even more...

Utley: Right. And then you say, "In the network environment, it's important to transfer an [idea or image] in a reasonable amount of time."

Bernstein: There you go. That covers everything. Okay, so we go to pixels and pixelization terms, and my question is, and Brian will help me here, when you're looking at the screen and you zoom, are you seeing pixels?

Utley: You are seeing pixels.

Bernstein: But the screen has no pixels.

Utley: No, but pixels are mapped into a raster-based generation; but yes, there are pixels.

Bernstein: Okay.

Utley: You see pixels.

Bernstein: Okay. You do?

Bernstein: Yes. There's no pixels but yet you see them?

Utley: It's not a pixel-based medium, but the raster presents pixels.

Bernstein: And it presents them distorted?

Utley: It will present them distorted.

Bernstein: Once you magnify them?

Bernstein: Okay.

Utley: It may take more than one raster to represent a pixel. In other words, a pixel is a composite. If it's a very large pixel, it'll take several raster scans to create a pixel.

Bernstein: But you will still see...

Utley: To see a pixel.

Bernstein: And then when you blow it up, you'll still see a distorted...

Utley: Right.

Bernstein: Okay.

Armstrong: This is the first opportunity where if we wanted to, we could say, in line 3,
 "...in which the pixels comma (data elements) comprising the image"...

Bernstein: We can't.

Utley: We don't want data elements, we don't want data elements.

Bernstein: Because do you see what's happening? You still are drawing off a pixel base.

Boehm: Pixel, and then this is goofy because in the next paragraph, we define what a
 pixel is. We're defining pixelation first, and then next we're defining
 pixel. Why don't we not define pixel up above...oh, yeah, I have to. "In
 which the pixels, i.e. picture elements..." How's that?

Bernstein: Yeah.

Boehm: In other words, everybody knows what a pixel is, but we're just throwing it...

Utley: It's a picture element.

Bernstein: Okay, that's fine.

Boehm: "Pixels, i.e., picture elements."

Bernstein: Right. That might even cover us in other space that we don't even know yet. Okay.
 Go to page 3...

Utley: On line 6, this is an opportunity to introduce the notion of a display system
 instead of a display monitor.

Boehm: It is...

Utley: Is that a problem to you?

Boehm: It depends on where we have to go with it, Brian. Where do you see us going? Do we
 need the differences defined later?

Bernstein: You could be very accurate here, Doug, because when this was invented, I ran my
 computer slash my TV at times. So it was through both displays. Remember,
 Brian? I brought you over. So I've always been running through a scan
 converter, my TV.

Boehm: So where do you want to go with this, Brian?

Utley: I just want to say "display system," and the reason I say that is because if you
 say display system, you integrate into the description the scan converter.
 If you say "display monitor" itself, a display monitor does not contain
 the scan converter. That's generally housed outside in a set-top box or in
 the computer hardware itself.

Boehm: Okay, I agree with you that you want to make that distinction; but do we want to
 make that distinction? We're still in the [background]. We're describing
 somebody else's, not ours yet.

Utley: Yeah, you tell us where you think the best place is to put it, Doug.

Boehm: Well, I definitely want to put it when we first represent what display 30 is.

Utley: Okay.

Boehm: What I don't know if...

Bernstein: Okay. By the way, here it's true, too, [what he says]. Brian's saying...

Boehm: It really is.

Bernstein: Yeah. In Prior Art, if you play that on your TV, it's still pixelated. It didn't
 matter if it's a monitor or TV. So Prior Art, no matter how you played it,
 did that, and that's good to say.

Boehm: In the background here, it's not important. What we do in the background is try and set up that the strawman of the Prior Art had these problems, and then you knock them down with your invention. So whether you set him up with the display or display system and you knock him down, he'll fall just as hard. I don't think that's going to make a big.

Utley: That's not a big deal here.

Bernstein: But it has to come somewhere in here.

Boehm: What if we're making some stupid statement here. Let me read those paragraphs to you real slow here, and then let's make a call on it because; or if this is a good opportunity where we have to figure out the difference between a raster and pixel-based system or scanning lines or anything, if we have to make that...if we have to educate the people in order to interpret the claims later, then now is as good a time to educate them as far as what's the background. I don't think we need to do that.

Armstrong: I personally feel that if we're going to be later using display system to define more broadly how we display things, we might as well refer to Prior Art in the same way since it does include it.

Bernstein: It doesn't hurt. It can't hurt because all it's saying is that Prior Art, no matter what system you played on. Here what you're saying is Prior Art, when you play it on a monitor.

Boehm: I guess just from experience, there's really no right or wrong answer on this, guys; but just from experience, I would tend to disagree with you. Whenever I define a term that I care about, I always define it in the spec, especially if it's not a normal, common, everyday-type term that you want to talk about in the background because when you're saying that it's the same in the Prior Art as it is in your invention, you say that today and you may want to argue that today, but maybe you want to change your mind tomorrow; and when the litigators litigate this, they're going to wish like hell you never said that it was the same in the Prior Art.

Bernstein: Okay.

Boehm: You can point to your spec and say, "voila!"...

Bernstein: And say we were working on our TV...

Boehm: ...our display system, and it's defined as such.

Bernstein: That's fair.

Boehm: And you can't go back to the Prior Art to define it.

Bernstein: Okay.

Boehm: So there's legal ways of doing it.

Bernstein: Okay, so let's see where we insert that correctly.

Boehm: Yeah, I think it'll be later when we're talking about element 30 when he defines the blocks of the system. Let's see...

Utley: On line 14, where you say "represented as a triple..."

Boehm: Yeah?

Utley: I think the correct word is "triplet."

Boehm: Okay, Steve pulled this from something on the Internet, so if you say "triplet," that is right, yeah. Triplet. Good catch. It took five of us to catch that! <Reading out loud to himself...> Here's the bandwidth.

Bernstein: Yeah, "...thereby speeding the transmission." Now that is true, but it's not necessary.

Boehm: "...decrease the file size..." No, he's got it right here, right?

Bernstein: Well, "...this results in a small source image file size," period.

Boehm: No. The whole sentence says "plus the teaching in the art..."

Bernstein: Okay, okay, yeah. That's right.

Boehm: No background. We're still setting up the strawman to knock him down.

Bernstein: Gotcha, but we don't need a network or Internet.

Utley: We're not talking about us—we're talking about the other guys.

Boehm: Yeah, Prior Art, and they were compressing the hell out of it and moving information because they knew they had to go through this limited...

Bernstein: No, but let me ask you this. Let's say you just set it up on your computer—you never put it on a network, I'll just give you the same argument—you wanted to display your family photos on your own display system. You built a frame, you put a picture, matched the size to the frame; and voila! It's on your system, you can't do anything with it. You can't zoom. You haven't communicated it over a network; you haven't sent it to anybody...but you still can't zoom on it.

Boehm: But you still can zoom and pan, you mean?

Bernstein: You still can't.

Boehm: Oh, you still cannot?

Bernstein: No, because you built the frame wrong.

Boehm: Oh! Okay, okay.

Bernstein: So I mean you built the image to target wrong.

Boehm: Oh, I see what you're saying.

Bernstein: Yeah. So it didn't matter if you transmitted over any network.

Boehm: Now this will get really hairy...how did you build it wrong?

Bernstein: Well, because you only gave the frame the appropriate size as was necessary to fill the frame.

Utley: You designed the frame to the image.

Boehm: Yeah, so it doesn't magnify at all?

Utley: Right.

Bernstein: Right, whether you had a network involved or not.

Boehm: Okay, and if it's a little bit bigger than the frame, you can still pan but not magnify—but not zoom.

Bernstein: Right, but the teaching in the Prior Art would be to match the frame to the image.

Boehm: Okay.

Bernstein: That's how the world's been working for a long time.

Boehm: I totally agree. Maybe we should throw that...does that say that here?

Bernstein: Well, I guess there are a lot of places where we're going to add it.

Boehm: Well, that's a great line what you just said..."match the frame to the image."

Bernstein: You see, that's going to become critical when you say that "two times magnification at least" because the truth is nobody built a picture

saying, "I'm going to give it a little more edge so I get a little more zoom." That's the difference. You built the picture...you had a frame size...you popped in their image to be that frame size...you created the image for that size. You didn't say, "I'm going to give them an extra pixel so they can zoom a little," or an extra pixel or two, or two times. So one drop, one pixel more than is required, is the new out.

Utley: Well, the only thing we have to be careful about is that there are applications that allow you to create an image which is larger than your viewing window and operate on an image which is larger than your viewing window. What's different is that that image, when you see it in the viewing window, what you're looking at is the image as it is intended, you're not looking at a compressed form of the image--by compressed, I mean a scaled form of the image--so that...

Boehm: Or it sits in the frame.

Utley: Right. So it's not sized to the window, it's sized to the system frame, whatever the application is, but it doesn't allow you to zoom into the image which will allow you to avoid pixelation.

Boehm: Right, and I [] when we had Chris Taylor say he had done years ago on his website...you can look at his website, by the way--msoe.edu--and Dr. Chris Taylor has his own link to his own personal web page, and he...

Bernstein: Where is it?

Armstrong: msoe.edu.

Boehm: msoe.edu, and Dr. Chris Taylor is his name, and it'll have a subdirectory for him. Then on his subdirectory, it'll say, "Go see images from my own website," and then he has his own personal thing; and in that, he has pictures of stuff. And he says those pictures, which were done way before you guys--when he first got here to Milwaukee, I guess is what he said--but he said that there are more pixels there than are needed, and that's just the way it just happened to come out. There was no intent to do it one way or the other way--he didn't intentionally match the frame size to the image--that's what happened when he did it. But he's not providing scanning and zooming, and...

Bernstein: Well, that's the difference.

Boehm: And, but he is not providing more than two times the pixels.

Bernstein: Well, that doesn't matter [] because really we're just saying that our art is based on the fact that we're providing extra data that allows, whether it's one pixel or not. One pixel might give you a zoom factor of .00004...

Boehm: I see what you're saying...

Bernstein: So why should be ever limit...the object of the invention is to create zoom by giving more data.

Boehm: Right. Can you zoom, Brian, without going twice the number of pixels?

Utley: Sure. Well, you can zoom to...what you're saying is you have a target image which is 2x the window, or 2x the viewing image, and, yes, it can be anything over and above the size of the viewing image. It's just a practical question of does it have any value...

Boehm: Right.

Utley: ...when they have such a limited...

Boehm: Magnification factor.

Bernstein: But we don't know into the future if it will. Somebody could get around us by getting it somehow under a 2, or, as a matter of fact, what if you only need 1.5? Why should we limit ourselves because that's not what was created?

Boehm: Okay.

Bernstein: You know what I mean? We didn't pencil it out and say two times is what we need to do this.

Boehm: That's a good...we got that...Steve and I must have come up with that two times.

Bernstein: We all came up with it just because the first button on your magnifying glass is two times.

Boehm: Okay.

Bernstein: And we were thinking...here was our thinking...that you were able to click that button on a regular image, and you were still okay—a little fuzzy—but you hadn't blown apart. So we were thinking anything beyond that. But actually as I re-thought that, I said that's not the issue here. If you're designing screen size to match frame size, it doesn't matter if you give it one drop more. That adds to the zoom capability by some factor...that extra data. But one and half times. What if you only wanted...what if your client says "I've got a picture of my wife, and she's ugly, so I only want a one and a half times magnification on her face."

Utley: Okay, we all agree.

Armstrong: Anything more than one times is the definition.

Boehm: And I think he's got it in claim 1. He scratched out "at least twice" and put in "is greater than."

Bernstein: Right.

Utley: So the right way to say that is that the target image is larger than the viewing image, and you've said it.

Boehm: But just claiming that concept.

Bernstein: Right.

Boehm: No...and providing zooming capability?

Bernstein: Absolutely.

Boehm: Right.

Utley: Which is the way you have it worded in claim 1.

Bernstein: I don't care if you built the picture and your frame size was "x", but that wouldn't achieve anything that we thought was cool. That would just mean you have an oversize picture in a frame and you could move around by grabbing the picture. By the way, that brings me to what made us start thinking about this was your Adobe example. You are grabbing a larger image, but you're moving it around kind of clumsily and it's not achieving what we achieve. Do you follow? Because you're just grabbing and kind of moving. As a matter of fact, there's a technology that's out...

Boehm: Yeah, but you can zoom, zoom, zoom in there.

Bernstein: Yes, straight in, and then you've got to grab it.

Boehm: Yes.

Bernstein: And move the larger image from that portion around. There's a technology called [Zif X] out today that allows for something similar to that, but yet it's very annoying that once you're in, you're in and have to grab and move around. It's a much different effect and feel than what you get when you look at our images and grab and move around. You know what I mean? In our image, the whole thing is there pretty much.

Armstrong: And this is a distinction that we begin to make on page three where the ability...our art allows you to, on a single image, once that image is

received by the system or displayed on the display system, it is complete. You're able to zoom in and pan around on it, and there isn't a requirement for the system to re-draw the image or any section of the image.

Utley: No, no, no, you can't say that.

Armstrong: Why? Let me first say what I'm saying, then we'll take out the parts that are wrong. Then the difference between some of our competitors is that they require if you are to zoom into an image and look at that zoomed portion of the picture and then pan at that zoom level to another section of that image, that image needs to re-draw the new information in order for you to see it.

Utley: And that's the trap because. In fact, the display system only buffers what is on the screen; and when you pan, you refresh the display buffer.

Armstrong: Even in ours?

Utley: Yes. You have no control over that.

Armstrong: But you have to because that's how you get a new image.

Utley: That's just the way the system works.

Armstrong: Right, right. You can't really do without what you're seeing on the screen. You've got to redraw.

Armstrong: Well, maybe this is the distinction for..

Boehm: But you're not grabbing a new file...you're not grabbing more files.

Armstrong: Right, and that's what I was about to say. The distinction perhaps is for the delivery over a network, and that when it is delivered over a network, they require the transmission of additional data, whereas our data has already been received in its totality.

Boehm: Well, that's the exact thing that the Yahoo! Map will do, right? You want to zoom into a map...

Armstrong: Precisely.

Boehm: ...it grabs a new image, and there is the network. But what Eliot was saying earlier was well why not make the network the link to your hard drive.

Bernstein: Right, it is.

Boehm: So then do you have to go get more information off the hard drive? That's the question.

Bernstein: Yeah.

Utley: No, be careful because in this day and age of virtual memory systems, there's a big grey area between the RAM and hard drive. The system may put part of that image on the hard drive.

Bernstein: It might put part in RAM; it might put half of it in the network.

Utley: That system can reside in several different places, and you don't know it. The system is managing the resources.

Boehm: I agree. So we have to figure out how to define in broader terms, just put it in memory or, I don't know, put it in sourced image storage. In other words, if a file comes over and gets lumped in Memory Means A, then it gets displayed to the display using however you want to do it, the question is, when you're zooming, do you have to go back to Memory Means A, whether that Memory Means A is across a network or on your hard drive or in a different PIM.

Bernstein: Or B, that's right. And that's a big difference, Brian.

Boehm: Because now you're getting real technical, and I don't know that you're not doing that.

Utley: The problem is that as you try to increase the precision of what you're saying, you have to be very careful.

Bernstein: Well, then we've got to take back "...one drawback of this type of system is that each zoom or pan operation requires the downloading..."—downloading is definitely the wrong word—"...of additional data over the network..."

Armstrong: Line 8?
Bernstein: Yeah. That's all wrong.

Boehm: What page are we on?

Bernstein: We're on page 3, line 8: "One drawback of this type of system is that each zoom or pan operation requires the downloading of additional data over the network connection." Well, that's not exactly what we're...

Utley: We're talking about the art...the state-of-the-art now. We're not talking about...

Bernstein: Or mapping the travel?

Utley: We're not talking about our system.

Bernstein: Okay. Then that's fine.

Boehm: That's exactly what the advantage of this system is, isn't it?

Utley: Yeah, exactly. It's not designed to work that way. It's designed to be an integral component of the displaying system.

Boehm: And also we're talking about the Yahoo! Map.

Bernstein: Once again, however, it's not limited...Let me ask you this question because I don't see networks at all, right? Let's just look at the Yahoo! Map program.

Armstrong: I've got it on CD ROM.

Bernstein: No, no, that's okay. I know what we're doing. When you move, whether you move on a network or off the network, it grabs that image, and it's different than what we look like. There's a definite difference of how those two things work. Do you follow me, Doug? So it doesn't matter whether it's on your hard drive drawing the data, over a network drawing the data, what matters is that you perceive a difference between the way that the Yahoo! Map goes and grabs another closer section of the map and you're stuck there. Now you can't move back without going backwards to that other image or to the left to that other image or to the right to that other image. All these things are broken down into "other image" basically.

Boehm: Right, you're getting another what you called the hotspot. These are all hotspots.

Bernstein: Right. Which is that technically a new file?

Boehm: That's a new file.

Bernstein: Then maybe that's our differentiation.

Utley: We have to be careful.

Bernstein: Well, we don't go from another file.

Utley: No, but they're going to go...

Bernstein: They may say that's all in one file. Right.

Utley: So that would be...

Boehm: I think that they are going for another file because whenever you click on another map...

Bernstein: So Brian's right. So what? Even if they were and there were 8 million files, we could combine it into one and call it one. But then if you just made what we do...

Utley: You really have to be very careful because you don't know how they organized and structured that whole mapping system.

Bernstein: You know what you do, Doug? You describe the optic. You say this is what you see with their system, and this is what you see with ours.

Boehm: That's what we're trying to do here.

Bernstein: And let's not let that get too complicated. Let's what we're trying to get explained out over time.

Boehm: You can't.

Bernstein: If somebody wants....

Boehm: That's the key. That's what our frustration is as patent attorneys. We have to define your invention in the legal technical words. You can't wave your hands at it. If you do, you won't get a clean street of passage.

Bernstein: You can't say it looks prettier?

Boehm: It won't be upheld in court.

Bernstein: You can't say it looks prettier, huh?

Boehm: No, you can't. And that's what I'm saying. I agree with you...I'd love to say, "When it looks like idea technology..."

Bernstein: Well, explain to me what's happening in my brain, then, on an electrical signal impulse, because there's a definite perception definite between what I see, why I see it differently, and how it relates to what I do, which gives you a completely different spatial representation within an image because of the way that I'm manipulating data. See, I always looked at our technology--and maybe this stupidity might define something here--I always looked that when you take that big image of ours versus one technology where you could...let's say we both have big pictures, okay? Let's just say we both go with the big picture in a small viewing frame. One says you can move the frame or the picture and get a new image of that image, or you can go deeper on it by drawing another whole separate image, okay? Mine, I always looked at it is that it puts the frame in the center; and as you hit zoom, you're sucking in data towards you that's coming from the outside peripheral, not in separate little chunks and new images, but as one image, and it's pulling it into like a vortex, so to speak, and giving you that new data to let you zoom or move. Follow me?

Armstrong: Let me ask a clarifying question of Brian. When we transmit a file to a user, he gets the entire file into a .TMP file?

Bernstein: No, it's just hard drive.

Armstrong: Right onto a hard drive. Now, as he manipulates the image on his screen...as I zoom to level one and then to level two or level three, or I pan within it, what sort of access to that file is made inside the computer, let's say?

Utley: It varies.

Armstrong: Okay, but there is regular access back and forth to data points within the file?

Utley: Yeah. Part of the picture may be residing on the file; part of it may be in active RAM.

Bernstein: Doug?

Boehm: Um, hum?

<Utley and Armstrong continue their conversation in the background as Bernstein continues with Boehm.>

Bernstein: Let me ask you to try and help me define something. Take a frame...take a small piece of paper and make a frame, okay? You ready? You got a square piece of paper?

Boehm: You want me to cut it? Yeah, I've got a sticky yellow pad here.

Bernstein: Perfect. Use that on top of your patent application and put it in the center. In my thinking where I don't understand that, when we do the Prior Art, when we take that frame and we want to see the upper-left corner--now remember, our piece of sticky is in the center--we now want to go to the upper-left corner, we've got to move the frame over the upper-left corner and now we're seeing that part of the paper.

Boehm: Which means you're moving the viewing window over a huge image.

Bernstein: Right. Or, you're moving the image to fit in the frame.

Boehm: Right.

Bernstein: Okay. Now with mine, put that viewing window in the center again; and let's say you want to zoom in or go to the...zoom in, what you're really doing is sucking in this data, aren't you? You'd be almost pulling through the paper through that frame. That's why you have that attached.

Boehm: No, what you're doing is you're scaling the...

Utley: You're scaling the total image.

Boehm: Yeah, the total image specifically or to fit a reduced frame.

Utley: But they're leaving the image as it is.

Bernstein: Ah, then there is a defining difference.

Utley: I know, that's why you call it zooming. That's why the invention is described the way it is. That's why when I do all the pictures and show all those relationships, that's why it's designed...it's laid out that way.

Boehm: Can we define our zooming in...

Utley: In fact, there's a scaling...

Boehm: ...as a scaling mechanism?

Utley: ...viewing window.

Bernstein: That's the question...can you...

Boehm: Can we define our zooming as the scaling of the image to a different window, which is the normal way, I think, of zooming and scaling. I don't think of...

Utley: The effect of zooming is to rescale the target image into the viewing window, or some portion of the target image. What you're doing when you zoom in, you're now scaling the complete target image to a portion of the target image, and then what you're able to do is take that scaled portion and move it around to the entire image, but it's at its given scale level. You don't have to re-compute the for every portion of the image.

Boehm: Right. I think we're fine with what we're doing. I just think we've got to...there's this topic 14, to be cognizant of as we go through this, to make sure that we distinguish our zooming from hotspot zooming by zooming by grabbing another file.

Bernstein: Right.

Boehm: Our zooming is scaling.

Bernstein: It's also by grabbing another file because it would be our view that that set of hotspots could be combined into a single file, and it definitely could be designed that way. I mean, I could write the file to be that.

Utley: But it would be another file?

Bernstein: No. I could take all five hotspots and write them into one file.

Utley: So the [] will be in one file?

Bernstein: Right. Exactly.

Bernstein: So you've got to be very careful here of what the difference is. It's such a minute, yet it's such a profound difference what we do...

Utley: But it is another image.

Bernstein: It is another...right. Not another file. That's the difference, right.

Boehm: It's another image?

Utley: Yes.

Bernstein: Of course. A hotspot would be second shot of that image at a closer scale...at a closer view...but it could be combined in one file in the end, even though it's two separate images. And the hotspot could drive right through it in that single file source.

Boehm: I'm thinking that if the mechanism for our zoom is to do the scaling kind of on the fly as you're walking around, we never go grab for another file...

Bernstein: Or we never...

Boehm: Hotspot or not—I don't know how many you put in there—you see, what I'm worried about is, guys, don't you have hotspotting on your website?

Utley: No, here's what...

Boehm: Yeah, we've had them.

Boehm: You've had them, right.

Bernstein: Yeah.

Boehm: And that concept of zooming is grabbing another image file.

Bernstein: Well, but it has the same attributes as our current file, so it's just grabbing another enhanced digital image.

Utley: It's grabbing another image, and you don't have to define it as a separate file. Just grabbing another image. Let me tell you what I think differentiates between one of these systems and what we have. We have, if you think of the target image as the user interface, we have an encapsulated image. It is an encapsulated image that is [] into a file that is transported as a an encapsulated object, and it is manipulated as an object, and you zoom into that object. It is an object whereas in a mapping system, your object is really the whole map system, whatever that is, and...

Boehm: It's the system application for that.

Utley: Right. What happens with the mapping system is the application will create mapped objects according to what you...

<End Side 1, Tape 1; begin Side 2, Tape 1.>

Utley: ...which are then handled individually as you need them or as you request them. What we're talking about is an encapsulated image which has all these attributes contained within that encapsulation.

Boehm: And that would be true whether or not it's on a hard drive?

Utley: Right.

Boehm: I guess that's right...yeah.

Bernstein: And then, so we are striking downloading and additional data over the network connection.

Utley: Prior Art doesn't need that either.

Bernstein: Prior Art doesn't need that. To do Yahoo!'s Map, you don't need a network and you don't need more data over that network. You see, you'd never beat this argument. A network is just a hard drive because really in the end all you've done is like added a cable to your hard drive, and all you're talking about is the length of that cable, really. So networks are not applicable really to what we do. They are an added-value benefit that we can get through that cable quicker or whatever, but they are not the key. The network could be considered the cable between your hard drive and the display. You know what I mean, Brian? We don't need any...

Utley: No, but what you want to do is you want to make sure that you specifically address a network environment.

Bernstein: I wholly agree.

Utley: In addition. You absolutely want to make sure that the...

Bernstein: That's huge, as an additional wire, meaning it's got different...

Utley: Then that's the way to approach it.

Bernstein: Okay. You follow that, Doug?

Boehm: No. Slow it down.

Bernstein: Okay, it's all based on this. You can do our invention off a hard drive, and it's still cool. The fact that you can transmit it over a fat pipe or a small pipe or FedEx it has no bearing. It does what Brian says: it is more valuable in a network environment because it now has the attributes to give greater, richer data that you didn't think was possible in the shorter time. In the end, you see the network and the limited bandwidth, that never mattered because no matter, let's say your pipe was a toothpick, it would get there by tomorrow. Let's say your pipe is a direct line to the hard drive that's able to suck it up at 10,000 RPM or whatever...what's the term?

Boehm: RPM, yeah.

Bernstein: What's the term? Not RPM.

Boehm: Bits per second or...

Utley: BPs.

Bernstein: Is that what you talk about a hard drive?

Utley: Well, RPMs.

Bernstein: Is it?

Utley: Well, yeah. Technically.

Boehm: The data transfer rate...

Bernstein: Yeah, I'm talking about how fast you can access your hard drive as a number that you buy hard drives based on 7200...

Utley: Oh, no, you buy millisecond access time.

Bernstein: Okay. So we're now 20 years into the future, and Brian invented a pipe that can suck down that speed he just said--hard drive speed. Well, there's no difference now, is there?

Boehm: Sell me on the concept that there's no difference between one hard drive and a network, and you're going to put the whole network industry out of business if you go there.

Bernstein: No, no, because it's a cabling system.

Boehm: I know, but...

Bernstein: It's just an accessed tour drive.

Boehm: And I think your point, and I think we've been there, that we're going to try and claim the broadest embodiment of your invention to be independent of any network or any hard drive or any...

Bernstein: And Prior Art also doesn't need any downloads or any networks. Prior Art, you can do Yahoo! zoom and pan, and Jim Armstrong just said it a minute ago, "I have it on my hard drive." And the program still operates by moving and grabbing this additional data. It has no network attached to it. He's doing it off his hard drive on a CD.

Utley: I thought we already covered that.

Bernstein: Well, I'm just saying one drawback of this type of system is that...and what it should say, if you want, is one drawback of this type of system in a network environment...

Boehm: I'd be happy to say that, but that says that over the network connection. The whole paragraph is to describe another example of prior systems.

Bernstein: But those prior systems don't require networks.

Armstrong: Let me suggest that...

Utley: Wait a minute, wait a minute. Come on. The first sentence says, "...over websites."

Bernstein: But all I'm saying is it doesn't have to.

Utley: Well, it's describing Prior Art, and this particular example is over Web sites.

Bernstein: Ah, versus Web CDs?

Utley: Yeah.

Bernstein: Or Jim's Yahoo! CD.

Bernstein: Okay, then I understand one example.

Boehm: And that's where we're going with the background. We're spinning our wheels here. Now if you want to add that to clarify, that's fine; but I don't want you to take away the distinguishing features that you have over networks because you may have to go run there some day.

Bernstein: Then do what Brian said: add it as an additional factor.

Boehm: Absolutely, but I guarantee you're going to have to argue this when we go to the foreign countries, like at the European office examiner, they're going to be really mean and nasty. I will bet you that they will find some very, very close art, and we will have to be throwing in all kinds...and my guess is that we're going to have to be throwing in all kinds of words that will have to be supported in the spec now to come up with something to survive a European examination if they find anything close, if we're not right that this is totally a broad concept. I'm just trying to...

Bernstein: Okay.

Boehm: We have to have a direction to run, and I need the ammo to do that; and I can't run to the network argument if you've either taken it out...

Bernstein: No, we're not taking it out, we're just...

Boehm: Or just minimized it.

Bernstein: We're not minimizing it. We're just saying you don't need it, but in that environment, it is also added value.

Utley: Let me point out one other thing why it's important...even more so. If you take the implementation like a Zif X, if it's local on your local system on your hard drive, you wouldn't care whether when you pan you reconstruct the piece that you're moving to.

Bernstein: Sure, that's different from what we do.

Utley: Because it moves very quickly.

Bernstein: But it still looks different from what we do.

Utley: But I'm not talking about that. I'm talking about when you move the magnifier, you reconstruct the piece that's coming into the window, but you would never see that. But over the network where you have elements which extend the response time of the system, it becomes a big deal, and therefore what you've got becomes more valuable...even more valuable over a network.

Bernstein: That's what I'm saying. Okay, I agree with that. So we're all hip on that.

Boehm: I think so.

Bernstein: Okay.

Bernstein: All right, let's move on.

Boehm: Where were we?

Bernstein: We're on page...

Boehm: Three, right?

Bernstein: We're through page 3. We're onto page 4.

Armstrong: Oh, and by the way, we also had a change on 21, if you noticed.

Boehm: Okay, let me run over the changes on page 3. <Reading out loud> "...additional map data" should read just "additional new images and sends it over..." that would be fine with me. Oh, how about "additional data as additional new images"?

Bernstein: "Additional source material"?

Boehm: That would be...

Bernstein: "Additional source data..."

Boehm: "...as additional map images"?

Bernstein: Yeah.

Armstrong: I don't think you need "new images." I think just "source data."

Boehm: But it's really getting a new image. It's getting a new map. You're looking to the file. You're going back every time.

Bernstein: Okay, "additional source data." Well, ours goes back and grabs more source data, too.

Boehm: Exactly. But we've got to be careful. But we're not going getting additional new images. I may have to argue that, so you've got to have that in there.

Bernstein: Yeah, okay.

Boehm: "...retrieves additional source data..." how about ", e.g., additional new map images"?

Bernstein: Right. That's fine.

Boehm: Okay, "...and sends it to the user computer." Wonderful. Okay. Next change.
<Reading out loud.>

Bernstein: We already dealt with that.

Boehm: So what do I do? Scratch it? Do I leave it in there, or what do I do?

Bernstein: Well, that's just saying our stuff, so you're still talking about the prior stuff.
Boehm: We're talking prior art.

Bernstein: Okay, so that's scratched.

Boehm: Okay. Next comment...

Bernstein: And that, again, scratch that one.

Boehm: Okay.

Bernstein: Because we're talking Prior Art here.

Boehm: I'm setting up the strawman, but now we're starting to knock him down.

Bernstein: Okay. Also, "there's a need for a system and method for providing a digital image suitable for sufficient file transfers." I don't care if it's hi, low, medium.

Utley: On 21.

Bernstein: 21.

Boehm: It says...I just think that "high-speed file transfers" is a pretty good term of art.

Bernstein: Well, but then somebody will say, "Is that high-speed cable or modem?"

Boehm: Oh, I see what you're saying.

Bernstein: Efficient.

Boehm: Higher speed?

Bernstein: No, we don't care about speed. You could do it at 2400 baud.

Boehm: We don't care. Whether...

Bernstein: The other system didn't care either.

Boehm: Okay, that's fine. I'll leave it, then get rid of high...

Bernstein: You're just stuck with whatever speed the guy's got.

Boehm: <Reading out loud.>..."to engage in long and slow conventional continuous file downloads..."

Armstrong: And that's fine.

Boehm: What's a continuous file versus a regular file?

Armstrong: Get rid of continuous. You don't need it.

Bernstein: Yeah, you don't. What we were trying to say is that additional data there, but we've already got that.

Boehm: As long as...yeah. And that's why I need that language up top to say, "...additional data," "additional new images..." Somewhere where I can go argue that this is what we meant, and that's what the Prior Art does. Okay. Whew! What's on the bottom?

Armstrong: What we've been talking about. It's all we just discussed.

Bernstein: Forget the top comment.

Boehm: I can't really...it's cut off at the top.

Bernstein: That's fine. It's not relevant here.

Boehm: Okay.

Bernstein: "At least twice greater than..."

Boehm: "At least greater than..." that's good.

Armstrong: Not "at least," just "an image size greater than..."

Bernstein: Right.

Boehm: Yeah, duh! Okay. <Laughter> I'll tell you why I'm kind of groggy here now, later.

Bernstein: We were groggy, too. We were doing pans 'til 4:00.

Boehm: Til 4:00?

Bernstein: Yes.

Boehm: And then...so how many hours sleep did you get?

Bernstein: None.

Armstrong: Four.

Bernstein: Well, Jim got four. I got none.

Boehm: Okay, I got ya beat. You got none?

Bernstein: No.

Boehm: I spent the night at O'Hare.

Bernstein: Oh! That's my favorite place to sleep on a bench.

Boehm: On the bench. You got it!

Bernstein: I've been there a bunch of times!

Boehm: Yep, I hear you. I think Doug's black cloud follows him when he travels. Every plane I got on was delayed or broken!

Bernstein: It just follows the travel industry.

Utley: You should have rented a car and driven home.

Bernstein: I almost...I was thinking about that, but I was worried about falling asleep too.

Armstrong: So we're into line 15, 16.

Boehm: Okay, and that's the one that's scratched.

Bernstein: No, and 15 I would say, "The enhanced digital image file replayed on a client viewing device..."

Armstrong: "...displayed on a client's display system."

Bernstein: Yeah. The viewing window having a pre-determined franchise.

Boehm: Do that again. On line 15...

Armstrong: "The enhanced digital image file is displayed on a client's displaying system..."

Boehm: Instead of just...

Bernstein: "...downloadable..."

Boehm: Oh, I see. "...is displayed." I'm sorry, the same sentence is up above. "...is displayed..."

Armstrong: "...on a client's display system, the viewing window..." and then the rest is fine. And then line 22, get rid of "at least two" and create "greater than."

Bernstein: Where?

Armstrong: Line 22: "...a magnification factor greater than..." Wait, what does it say. Hold on. <Reading out loud.> "...a magnification factor..."

Boehm: Oh, "...a magnification factor of at least two..."

Bernstein: No, "...greater than one."

Boehm: Okay.

Armstrong: "...greater than one without pixilization."

Bernstein: We don't mean without pixilization. No...

Armstrong: Yeah, that's right. It should be, "...a magnification factor greater than one." We haven't yet, I don't believe, defined a magnification factor yet, though.

Boehm: No.

Armstrong: It comes later.

Utley: It comes later, yes.

Bernstein: And you can use, where I was telling you, Doug, where it was built onto a frame size, so therefore there's not additional data to draw from, therefore your zoom is zoomed to expanding the fixed pixel set.

Armstrong: And the next sentence, "The enhanced digital file further includes control data to allow the user to control the magnification factor." The question we had here was it seems as though we might be talking about the applet here.

Boehm: Yes, we're talking about the applet.

Bernstein: Then it's two different files.

Utley: Yeah, but...

Boehm: Yeah, but the file...oh, I see, we're calling the enhanced digital image file the encapsulated [sloping? full thing?].

Bernstein: Yeah, and there are two separate files that go to the user.

Utley: But it's encapsulated. It's actually [copied]. They always travel together.

Bernstein: They travel together, separately.

Utley: Right. Then we shift.

Armstrong: They travel together, but they are two separate files.

Bernstein: Virtually, it's one, but really it's two.

Utley: And associated with each other.

Armstrong: But we're calling it "the enhanced digital image file," but that's not necessarily true, Brian?

Bernstein: No, he's saying...here's what the story is, Doug. You got one file above an image, and there's not a single drop of other data in that file. It's called a .JPG...we use it. There's also a file...there's two or three files actually that get downloaded to the computer--or he has it on his system already, it doesn't matter to us--that allow him to zoom and pan.

Armstrong: And those are transmitted simultaneously.

Utley: There is additional data that is required, whether you have a plug-in or not.

Armstrong: Really?

Utley: A plug-in by itself has no information relative to the size of the image, to the number of steps you're going to take to drive into it.

Armstrong: But that's all built in...

Utley: There's another file, like an index file.

Bernstein: Oh, there is. Okay.

Utley: That's what I'm saying.

Bernstein: Okay. I gotcha. The person could have pieces of the file, like the applet, already on his system. But what Brian's saying is there's control data that goes with the image that was based on the image specs that then tells that interface to operate according to a set of assumptions. Right, Brian?

Boehm: Okay. I agree with you. I think what we're...

Bernstein: No, not within the .JPG file. You've got to be very careful. So we're not talking the same thing. Those are additional files.

Bernstein: Okay. Look at page 24, claim 1. "A method of dividing a digital image file comprising two elements, a digital image file...having an image file..." and "2. A user interface for the digital image file."

Bernstein: But we don't have to provide that. That could already be on his system.

Boehm: Oh, my gosh.

Bernstein: He has to have one to view the image; we don't have to provide it.

Utley: But he has to have the control data.

Bernstein: He has to have the control data to tell him how to view the picture, and that could one day be part of the .JPG file, I don't know. But today how we do it is as three separate pieces: an applet, a control file that tells him certain things about the .JPG, and a .JPG. Those things come packaged together. Now, a guy might already have the applet on his machine; therefore, I don't need to send him that packet--the user interface.

Armstrong: If that's true, don't we send it anyway?

Bernstein: No.

Armstrong: We don't?

Utley: We do.

Bernstein: We don't have to, but like...

Utley: We always do.

Boehm: But that doesn't matter with your infringer. That's how you have to think when we're talking about the claims.

Bernstein: What do you mean?

Boehm: Would the infringer on your patent send it?

Bernstein: No.

Boehm: No, he'd send it to you once on the hard drive...

Bernstein: He'd Fed-ex it to you, and then not...

Boehm: He'd start sending you images, and each time he wouldn't be sending...but each time you would be sending some kind of control data?

Armstrong: Yeah.

Boehm: That's what I'm thinking, and that could be interpreted as the second element of the claim here.

Utley: And that control data really controls the motion of the zooming and panning.

Boehm: Right.

Bernstein: But that could even lie technically on his computer.

Boehm: Right.

Utley: The only case where that would actually work is if you knew that the...

Bernstein: The size of the .JPG.

Utley: The size of the .JPG and the size of the window.

Bernstein: And that could be for medical imaging where they give you the specs and say send me every image of this size, you don't have to send every single little thing.

Utley: If that was the only kind of image that everyone wanted.

Bernstein: Okay, we're doing x-rays. There's an X, Y, and Z size; here's our frame size; we never need to get that control data from you because it's built in.

Utley: <Inaudible comment.>

Bernstein: Okay, but let's say we're dealing with a bone doctor who takes strictly legs, and it's always the same. I'm just giving you the case.

Utley: I know, I'd <Inaudible comment.>

Bernstein: Right, and I don't want to get around that.

Utley: The fact that there's radiography is a little bit more than one image size. Theoretically, you're right. You could find an application where there's one and only one image size, then you could put everything in the system.

Bernstein: A size.

Armstrong: MRI always have the same size, don't they?

Bernstein: Right-2'x2'.

Boehm: We thought we had this one nailed down.

Armstrong: In MRIs you also...

Bernstein: You did have it nailed. We're missing...you just want to say "optionally provided."

Boehm: You can't use the word "optionally" in the claim.

Bernstein: We'll change that rule.

Boehm: No you won't. What we'll do is isn't the user interface provided from somewhere...we don't say where it's provided.

Bernstein: It could be any of four hundred of them.

Boehm: It could be provided from his hard drive.

Bernstein: Absolutely. It could be provided from somebody else's hard drive through a network.

Boehm: Exactly. That's why this covers it because the word "providing" is so broad it doesn't mean that we're sending it. See, we're providing a file...the digital image..we're fine.

Bernstein: Okay, I see exactly what you just said.

Boehm: We're providing a file for viewing.

Bernstein: Totally. I totally understand. Well, now we might not be providing the user interface...

Armstrong: Yeah, this still reads that it is "...a method comprising the providing of..."

Boehm: Yeah, you might be doing only step A at a time.

Bernstein: Yeah.

Boehm: Oh, damn. Okay.

Bernstein: Oh, yeah.

Boehm: Okay, that's a good...let's...boy. Let me think about that. What I want to do is make the element A that you're providing a digital image file having this and that, and you're also having control data to work with the user interface for the digital image.

Bernstein: But you might not need the control data. That's what I just said to Brian. What if a client says to you every one of my images is going to be a 2'x 2', and I want 50 time magnification. You never have to give him control data, you just have to...

Boehm: If we make the second part, B, a dependent claim. We can try it.

Bernstein: Do you see what we're saying?

Boehm: Yeah, absolutely. We don't...

Bernstein: And we don't want somebody to get around this.

Boehm: Absolutely. Great broadening work here. We've been through this claim, I thought we had it, everybody agreed to it! And that's where I'm going to run into a problem. I can't re-write this from scratch and get it on file today from working at half-speed here, you know what I mean?

Bernstein: Yeah, we've got to change that, though.

Boehm: These claims are not final.

Bernstein: No, I know, I know.

Boehm: We can file the claims as-is without one word. What we need to do is correct and amplify the specification because we can never add to the specification and keep the same priority date. I can go change the wording of the claims as long as that wording and explanation and interpretation is in the spec.

Bernstein: Okay.

Boehm: So I agree with you. This should be a dependent claim for the bottom half of claim one.

Bernstein: He's going to make that dependent because we don't have to do it but we do.

Boehm: Right. That's how you do optional.

Bernstein: Yeah. I like that. And then claim 1.

Boehm: Now does that read on the Prior Art? You provide a digital image file, having an image...

Bernstein: No, that's the invention right there.

Boehm: Right.

Bernstein: That if you ever looked at what I did back there, it was create a bigger picture for a small frame.

Armstrong: Now if we circle back to where this started on page 4, in the last sentence, that refers to "a digital image file, including control data," which is not correct.

Bernstein: Where?

Armstrong: The last sentence of page 4. It's not "the enhanced digital image file" that provides that, it's an additional option file...

Bernstein: Element.

Armstrong: Right...that would provide that.

Boehm: Okay. This is the summary. I can throw the word "optional" in here. So the "enhanced digital image file A..."

Armstrong: "...may be accompanied by..."

Boehm: I think just "...may further include..." most of the time, right?

Armstrong: Well, no, the file itself won't. It may be accompanied by additional files.

Bernstein: It could be in the file. We don't know. One day you could write [] that has a header inside it that says, "Here's your information." all bundled into...

Armstrong: But this is an exemplary embodiment, which means that today the enhanced digital image file may be accompanied by an additional file which...

Boehm: How about "associated with"?

Armstrong: That's fine, I think. Brian? "Associated with an additional file containing control data."

Utley: I think you should have a very general statement which will always be true, and then you could say, "The enhanced digital image file is associated with control data which allows the user to control the magnification factor."

Armstrong: And the control data...

Bernstein: That absolutely always has to be there, Brian.

Utley: Yeah, okay.

Armstrong: Otherwise you don't have our invention, so that's the right answer. Did you hear that, Doug? "The enhanced digital image file is associated with control data," and that's the only change right there. Strike "further includes" and replace it with...

Boehm: But I thought you said that once you've associated the first one, you never have to associate the rest of them.

Armstrong: When we said the associated was something that was on the hard drive, so we don't necessarily send it, but it will continue to be associated.

Boehm: Okay, okay.

Utley: Yeah, it's always associated. The data always has to be there to prevent zooming and panning.

Bernstein: Right, whether it's in the file, out of the file, with three files, nine files, however the hell you want.

Armstrong: So it will finally read, "The enhanced digital image file is associated with control data."

Bernstein: Hold it. "The enhanced digital image file is associated with control data to allow the user to..."

Armstrong: So "is associated with" replaces the two words "further includes".

Bernstein: Beautiful.

<Inaudible comments.>

Boehm: The rest of this is just comments?

Armstrong: Just on this page, and actually we struck this...5, we struck that. You have to put digital later.

Boehm: I'm still on page 4, guys. With the comments on the bottom, can I scratch them?

Armstrong: No, we took care of that.

Boehm: Yes, I think we've discussed this.

Bernstein: No, that seamless zoom, I love that word because everybody else isn't a seamless zoom, we are. We seamlessly zoom around an image. Everybody else has to grab and give you another frame and stop you and you have to remove to a different image in the picture. We're seamless. You can just go around and move and go, and it's in a virtual environment really.

Boehm: Now is not the place.

Bernstein: No, I know. I just want you to know.

Boehm: We can if you want.

Bernstein: No.

Boehm: "Seamless..." I like that. Let's...

Utley: Seamless may mean continuous motion and zooming is a step procedure. There's steps.

Bernstein: That's true.

Armstrong: It's not seamless.

Utley: The panning is seamless, but the zooming is not.

Bernstein: Right.

Boehm: But, in fact, what I'm trying to get at is Eliot is trying to claim and describe the invention in terms of what the user sees, which is great. As long as you can come up with good words and descriptions, we'll throw that in because we may have to run there if our technical description, which is what I've been trying to do to define the boundaries, fall because some bozo did this before and didn't really make it very public because he didn't know what the hell he was doing. We may have to say, "Oh, yeah, but try putting it on his. It doesn't do what ours does even though we couldn't figure out technically distinguish it in our..."

Bernstein: Right. It was a brand new phenomenon that was hard to...

Boehm: But in order to argue that, I have to have your concept of seamless zooming.

Bernstein: Well, let's use Brian's. It's seamless pan and...what kind of zoom? Continual? Flowing zoom?

Boehm: It appears to be seamlessly zooming...what do you mean "seamlessly zooming"? Do you mean panning?

Armstrong: Both. Both happen seamlessly in ours. When you increase your Adobe picture, you move in and grab a new frame of reference basically at that stage. You're kind of stuck there. In ours, you're not. You can seamlessly...you know what I mean? You can drive further and further and still have the rest of the peripheral view. When you do Adobe, the magnification...is that true, Brian? No? Because when you pull in the painting and you've got the signature... you see, it's not describing what I want to say, the seamless for zoom. It is for pan.

Boehm: The seamless zoom, right. The seamless panning, I like that.

Bernstein: But the zoom is different in look.

Boehm: I agree. Now how do we describe your zoom versus Adobe or...?

Armstrong: Why do you feel different when you zoom in our picture than when you put some magnification in Adobe?

Bernstein: It's not seamless, is it? It's fluid.

Boehm: I don't feel any different. Sorry, Eliot! <Laughter> The only difference that I feel is that I know I'm going to end up pixelating yours and all bitmapped images, whereas I know I'm not going to end up pixelating, I'm going to hit a brick wall, but it's going to be a clean brick wall, for Adobe, and that is...

Bernstein: No, it feels different. You're 100% wrong because you will be the only guy I've shown this to that's said that. Everybody found it unique and everybody who I showed it to said Adobe.

Boehm: For viewing an Adobe vector-based file?

Bernstein: Or a Corel pixel-based file.

Boehm: No, pixel based I'll give you, but yours is different. But when you're talking vector based, I think you can zoom vectors until the cows come home without pixelating.

Bernstein: But you can't...the perspective is different. When you take Adobe and zoom in on the image, you drive straight down to one point and then have to somehow have to move differently to get to other points than you do in ours.

Boehm: Yeah, generally you have to back up.

Bernstein: Right, or something.

Boehm: Zoom and then to go find out where the hell you are. But that's not always the case either, right Brian? Like Adobe PhotoShop or other...

Bernstein: No, I've been using all of these, and it's always been different. Our technique is different than all those. I've been using graphics programs.

Boehm: Yeah, I know, and haven't you seen a graphics program that shows you where you're zooming? I know what it is! On Adobe IV, when you zoom, the left window when you have it there with the bookmarks, it'll show you where you're zooming.

Armstrong: It has the box around that area? Kind of a miniaturized photo of it?

Boehm: Exactly.

Armstrong: Yeah, I've seen that too.

Bernstein: But that's just trying to give you what we give you in a pre-pack...ours encompasses that without having to need that. See, there's a difference that every engineer in graphics that's ever seen that has said "cool," not "oh, I can go over in Adobe and move around images."

Boehm: That's why I wish I were an expert in this graphics area. I would have figured this out...the difference.

Bernstein: Well, now that you say you're not, I need somebody to step in who can because I think that we should file with what we have here, but this area needs to be absolute, not less kind of vague. Because there is a critical difference. It is something that can be optically seen, so therefore it can be electrically defined.

Boehm: And we're trying to do that in the video side with Chris Taylor.

Bernstein: Maybe we do that with him on this. You want to ask him?

Boehm: I don't...he's going to have a kid this summer, and I think he's not even going to be around much in August.

Bernstein: Well, maybe he's got somebody.

Boehm: Yeah, maybe he knows of somebody.

Bernstein: Or go over to my old alumni at Madison, their graphics engineer.

Boehm: This is a...in order to protect our butts, we have to do that by September 1, and that's a big thing to do.

Bernstein: Why? I thought we could always go in and amend our claims on this stuff.

Boehm: You can amend the claims as long as it's supported in the spec. Now if we have to get down to the nitty-gritty of the definition of the technical excuse to amend your claims to distinguish over what has been done before...in other words, if we have to limit our claim to the histogram between a range of X frames per second and Y frames per second, that is our invention. If you incurred less than—I don't know what the histogram shows...17.6 frames per second—that is not our invention, and we may have to go there, to be that narrow to survive if somebody else has done it at 17.

Bernstein: Wow, wait a minute! I hope that's not correct because at lower bandwidth you might have only 17 frames, but you have greater data. But let's get to video later, right?

Boehm: But my point is that you want support in specification, including technical excuse language, because I made need that to put that in the claim to make your patent survive.

Bernstein: Well, let's put something in here that defines this.

Boehm: Yeah.

Bernstein: Something that defines the...

Boehm: But the point is that we can't hire a technical expert to get the...

Bernstein: Then let's get someone in then we'll get a technical expert to define later.

Boehm: If it's to be considered new subject matter...

Bernstein: No, it's never a new subject matter because the first image that did this, did this.

Boehm: No, no, no...new subject matter for the document on the day you file it. They don't care about what you did in your basement. The patent office doesn't care. They care about the words and figures that you put on this paper

when you file it. That's all the patent office cares about. You can't go back...

Bernstein: That's not what you told Chris the other day. Chris said, "What happens with the Mom-and-Pop inventor who later discovers the equation to what they did?"

Boehm: Finding who was the first inventor, that's in an interference. The question isn't whether the patent's valid or not in the scope of your claims, the question then is was Mom and Pop doing it a year before the other guy? But if Mom and Pop didn't describe their invention in the spec, they will never get to an interference or the interference will be blown away because it didn't meet the rule that you have to clearly and distinctly and accurately describe the invention.

Bernstein: Well, we clearly describe it, but we might not know the technical underpinnings, and I've got to go recheck my notes, but I think that's exactly what Chris Wheeler asked you.

Boehm: Absolutely, and I agree with you. We don't need to know the reason why.

Bernstein: But later we can put it in?

Boehm: If it does not add new subject matter.

Bernstein: But this wouldn't be new subject matter, this would just be an explanation of why.

Boehm: Yeah, but if we're up in the fog right now and we are using words that are so broad...let's say our claim said, "Our zoom and pan works really neat." That's our claim. There's no way we're going to be able to go back and say it really means having a frame rate between 30 and...

Bernstein: Then you know what? Put in the word "seamlessly" because I'll be able to argue that until the cows come home that there's a difference between what we do and what they do, and somebody will argue out what seamless meant.

Boehm: You won't get the chance to argue. If we put the word "seamlessly" in the claim and it's not supported in the spec, the court will determine by itself without ever talking to you what it thinks "seamlessly" is.

Armstrong: Do we have to then, in order to cover this particular issue, do we have to get into a description of Prior Art and the standard by which zooming and panning is occurring in Prior Art, and then distinguish as clearly as possible in words, how ours is differentiated from it?

Boehm: That's the ideal way to do it, Jim. That's why I'm saying, and if all of us knew that technical underpinnings, this would be a much more [] written document...

Armstrong: Is it necessary, Doug, to describe it in terms of technical underpinnings, or can we describe it in terms of a user's observation?

Boehm: You're halfway there. "User's observations" would probably give us sufficient...

Utley: "...allows you to seamlessly pan..." and all the <inaudible comment>

Boehm: The claim will be interpreted by the spec.

Bernstein: That's true. <Responding to Utley above.>

Utley: Now the only differentiation is the zoom without pixelating.

Bernstein: Okay. I'll agree with that.

Boehm: And then you saw that I went to umpteen degrees to define what the hell pixelation was because that's a word in my claim. Do you see that?

Bernstein: Yeah, that's fine, and I'm going to concede on that because Brian just made a good point.

<Everyone talking at once.>

Boehm: Because [] will know the reason why in terms of [], but you do have to know enough about what you're doing in order to convey to the average person skilled in the art so he can make and use it and he understands just what the hell it is.

Bernstein: You see, Brian, that's my question now. That comes back to what's different between our zoom without pixelating versus theirs, but we've already described it in the way we built the frame.

Utley: Right.

Bernstein: That's the difference.

Armstrong: Okay, let's stick with that.

Utley: No, we bounded how you prevent pixelation.

Bernstein: Okay, then that's the key.

Utley: We totally bounded it.

Boehm: Okay, I'm lost now.

Bernstein: We're fine.

Boehm: ..."Seamlessly..."

Bernstein: Forget "seamlessly."

Boehm: Okay.

Armstrong: Page 6...we're off of 6.

Bernstein: No, on page 5, I only had one more question. Figure 2, just print film is what it's showing...it can be digital, and we talk about that later, correct?

Utley: We separate it now.

Bernstein: That's where I'm confused.

Armstrong: Page 6, "24 to 32-mm lenses.."

Bernstein: Why? We can use any lens.

Boehm: It's a "such as"...it's an example.

Armstrong: Okay.

Bernstein: As long as it includes every lens.

Boehm: Oh, sure.

Bernstein: Okay.

Boehm: And it says, "may include," but then if we ever needed...you see the reason we get so specific on this, Eliot, is because if somebody else just happens to be doing it out there in the world with a 2mm lens and it doesn't haven anything to do...it doesn't come out looking like yours at all, but it just so happens our claim reads on what the hell he was doing, we can come back and say, "Oh, no, that's not really what we were doing. We really meant this; and if this is important enough, we'll put the words '24 to 32 mm' as a dependent claim."

Bernstein: But it's any lens, isn't it?

Boehm: Yeah. My point is if this 24-32 means anything...

Bernstein: But we can still say any? We are saying "any," but we've defined something.

Boehm: If that was your preferred embodiment, that's the other reason.

Bernstein: Okay, that's fine.

Boehm: It's not limiting.

Armstrong: As long as it's not limiting.

Bernstein: And then "the image of a scene..."

Armstrong: On 10.

Bernstein: Just strike it...."of a scene."

Boehm: Okay.

Bernstein: "...has utilized an image which is being photographed."

Boehm: Okay.

Bernstein: And then you see "The image may be a print film image, analog image, digital image, negative, TV signals..." Can that be, Brian?

Utley: No,

Bernstein: No? "The camera captures shoot..."

Utley: Well, yes, you can use TV signals to create an image, but you can't enlarge TV signals.

Bernstein: Okay.

Utley: But you can use TV signals to get an image.

Bernstein: Okay.

Boehm: Isn't an image just broader than that? It's what the eye perceives; and once it's digitized, then it's a signal...or it's analogized, once it's captured in some format. So an image isn't really captured. It's a captured image when it's analog or digital or negative or film or something, right?

Bernstein: Um, hum.

Boehm: So a TV signal is already captured.

Bernstein: Gotcha. Okay.

Boehm: So what I'm saying here is the image...that the camera is utilized to do the capture.

Bernstein: I've got you. I'm set with that point, actually. Okay?

Boehm: And again, this isn't really...as long as you're best-moded in there, we're fine. And we shouldn't use the wishy-washy language "may be." That's not restrictive.

Armstrong: In line 20, we inserted the word "may" only because it also may not include a developing device.

Boehm: That's fine. The next sentence says that, though.

Armstrong: Oh, it does?

Bernstein: Jim, I noticed that after the "may" came in. And we definitely talked about a digital file, although...

Boehm: Then should we leave the "may" out? Because it will include some...you've got to develop print. I think he was right.

Bernstein: Well, what if it did it all on one system?

Utley: Well, it doesn't matter. It's still developed. Like a Polaroid.

Bernstein: That's what I was thinking was Polaroid.

Utley: That's what I thought, but it does have a developing device.

Bernstein: Yeah, actual images developing device.

Utley: Well, it's self contained.

Bernstein: Right, but it's still...

Utley: Part of the film.

Bernstein: And it's still developing it.

Boehm: I think you better leave the word "may" out.

Bernstein: Yeah, that's what we're talking about. Now my bottom comment is wrong here, but it definitely comes in when we describe a digital image because I'm completely confused by some of the logic there.

Boehm: Where? At the bottom of the page?

Bernstein: Yeah. On a digital image, when we size it, we say we don't make a bigger target frame than we have sourcing for.

Utley: Because as soon as you do, you introduce pixelation.

Boehm: You don't want to enlarge anything unless it's not been digitized yet.

<Everyone talking at once.>

Armstrong: It's part of the shooting.

Utley: A digital image is a digital image. It has pixels, and it has a height and a width.

Bernstein: And it's just placing them all in the frame.

Utley: You see, you place it into...

Bernstein: We've gone over all the developing and scanning and art frame, Brian. Right, by picking "I want my limiting size to be four football fields.

Boehm: Exactly! Now you've got the...[] source image. <Everyone talking at once.> But you don't...usually you don't enlarge that because if you do...

Bernstein: You start pixelating...

Boehm: ...pixelating, and that's...

Utley: Because you're enlarging pixels.

Armstrong: We just create it large, we don't create it small and enlarge it.

Bernstein: But we don't create it to fit the frame, we create it to blow away the frame.

Boehm: Am I understanding correct, though, that you never enlarge a digital image before you process it? That's not a step for a digital image. You only enlarge a print-film image, correct?

Utley: Right.

Bernstein: But what you do do is set...

Armstrong: Set your...the image that you're taking, your target image, add a size so that when it is taken, it is already at a size that exceeds the view window.

Boehm: I see what you're saying, but I don't call that enlarging, I guess.

Bernstein: Okay.

Boehm: Good, good.

Armstrong: Okay.

Bernstein: But let's make this clear because I don't understand it still within the verbiage that's here.

Boehm: Okay, what line?

Bernstein: Well, we'll get to it. That's why I said it's there because I started to get confused, and then later we'll get into it...into the mathematics of it. Just wanted you to be aware of that.

Utley: Okay, page 7.

Armstrong: Page 7...

Boehm: I'm sorry, I want to back up. Did he get into the enlarger? The only enlarging is on page 6, line 24. "System can also include [] 16 for enlarging the image which is developed by developing ..."

Bernstein: Yeah, that's fine.

Boehm: 99.9% of the time, this is going to be a photographic enlarging device.

Armstrong: Right.

Boehm: Right?

Bernstein: Yeah.

Boehm: You may have to use that word someday. I've got to have it in here.

Bernstein: Okay, yeah, because we wouldn't call it a "pixel-enlarging device."

Boehm: Exactly. "...the image may be photographically enlarged from a print film image," okay?

Utley: We said earlier "non-digital image source," in this section, did we not?

Boehm: Yeah. I just want to get the word "photographically" in there.

Armstrong: Okay.

Bernstein: Yeah, and then...

Boehm: "...be photographically enlarged..."

Bernstein: Well, it doesn't have to be photograph. Is it negative of a photograph...?

Boehm: Okay, what's the word then? I think it is.

Utley: Yes, it is.

Bernstein: Yeah, you would say enlarging a negative is a photographic enlargement.

Utley: It's your choice whether you enlarge it as a positive or a negative.

Boehm: What we're really talking is analog enlargement as opposed to digital.

Utley: Right.

Bernstein: Correct.

Utley: Optical and analog.

Boehm: Optical analog, yeah. "Optically enlarged"? No. Yeah. Well, photographically...

Utley: I wouldn't be restrictive...we'll, you don't have to be restrictive in that.

Boehm: Right. And photographically is generic.

Bernstein: Cool.

Armstrong: Page 7, line 19. The question here was just to clarify really more for Brian than anybody is are we able to take our digital image and, and I think we talked about this earlier, but send it right to a set-top box or something else.

Utley: Absolutely.

Armstrong: We don't say set-top box, and I think we said earlier set-top box presupposes that it includes a computer element within a set-top box.

Utley: But Doug, we could externalize that. We could make it explicit that there'd be personal computer, laptop computer, so and so, and set-top box...we could include set-top box in that string of definitions.

Boehm: Right, and technically, this is a little bit goofy. The way we're supposed...and maybe he did it, I don't know, but the first time the number 22 appears in the spec, should be the definition. And the numbers, if you noticed, are in order. The number 10 is the first reference number; 12, 14...that's how you find the reference numbers in a well-drafted patent application.

Bernstein: Well, that confused the shit out of me. Where the 10 came from, why it was there...

Boehm: Well, you start at 10...look at page...and this isn't a big deal for you guys, but look at page 5. You want to go straight 10. System 10, boink! System 10 includes camera 12. We go on up 12, 14, 16, and on up.

Bernstein: Yeah, I followed that.

Boehm: So you never need to know where those reference numbers were defined. That's why you define them up front, and that's where he missed it because 22 hasn't been defined yet but he's using it-computer 22.

Armstrong: I first shows up in line 17?

Boehm: Exactly. So let's genericize that and define it later. <Reading out loud.> "Alternately, a digital image may be provided from camera 12...may be provided directly..."

Armstrong: ..."to the user." In line 17.

Boehm: Um, hm.

Armstrong: "...to the user," and then the first reference is in line 21, where we define computer 22. That's fine.

Utley: That's good.

Armstrong: And then add to that "set-top box."

Boehm: Yeah, down below.

Bernstein: Or TV.

Boehm: Or whatever. We're getting there. Hang on. So it's "...to the user via a communication link..." I'm getting rid of "or cable" because again he hasn't defined 23 yet. 23 will be defined later because he hasn't even introduced 22 yet. That's what happens when you edit a patent application.

Utley: Doug, how would you take care of the situation where the set-top box may be integrated into the display device?

Armstrong: I think that might be covered in the next thing, where we say, "Computer 22 includes the CPU, a ROM, a RAM, and a display device..."

Boehm: Exactly.

Armstrong: ..."or input device. It also may include any hardware device, peripheral device, or software necessary to perform the functions described herein."

Utley: Right.

Boehm: Yep. I guess we're there.

Armstrong: That does get us through that.

Boehm: That's the function of computer 22. Processes the digital image file, correct?

Bernstein: Yeah.

Boehm: We're talking about figure 1 still, right? You've got the figures pulled out to the side like I do, right? Sure.

Bernstein: Sure.

Boehm: Yeah, you're supposed to because when you're reading this, you're supposed to have the...

Bernstein: Mine are so bent up, it's not that hard to get to.

Boehm: Usually the pages are so out of order, you can't find the figures anymore. So "System 10..." see the number 10?

Bernstein: Yeah.

Boehm: "...includes computer 22"--that's his box 22- "...configured to process computer image file created by the above-mentioned devices." That's the definite of 22. Now we...so it's a processing device, right?

Utley: Right.

Boehm: It processes...right, okay. "Computer 22 may be a personal computer, a laptop computer, a mini-computer, a microprocessor, mainframe computer..." He's going bonkers here..."a network computer..."

Bernstein: That's good. A set-top box?

Boehm: Yeah, we can throw "a set-top box" in there.

Bernstein: You want these words.

Boehm: A toaster in there if you want!

Bernstein: Yeah, a toaster with a display.

Boehm: Right, and a processor.

Armstrong: The following sentence kind of wraps it all up or anything Doug has.

Boehm: Okay, so where am I putting set-top box?

Bernstein: Under...

Armstrong: After one of those things...after...

Boehm: But we haven't shown NTD yet.

Bernstein: Yeah, but set-top box should be TV, too. Well, a set-top box plays through a TV...well, no, it doesn't have to.

Armstrong: Let's put set-top box after server computer...

Bernstein: And TV...or TV.

Utley: You said set-top box goes between...

Armstrong: The TV.

Bernstein: Or if it does what you said and the TV comes...

Utley: But we have to take care of the case where it's built into the...

Bernstein: Right. TV.

Utley: But then you depend on the CPU, the read-only memory, the RAM.

Armstrong: Does all that need to be in the TV?

Utley: Yeah.

Armstrong: Okay.

Boehm: My question is if you define computer, 22, as the thing...oh, my gosh, 22 isn't the user's...is this...

Bernstein: No, isn't that our computer?

Boehm: This is our computer. 26 is the user's computer and display and set-top box...I mean, 28 and 30, that's what I was thinking about. Where it says later in the next page, and say, if you look at the figure 1, 28 and 30, could be combined to be a set-top box or a TV or you name it.

Utley: Yeah, user computer.

Boehm: Or a toaster with a display.

Utley: Right.

Boehm: The point is, what is computer 22? That's the one that puts it on the Internet. That's your server.

Utley: Right.

Boehm: So you don't put the set-tops...

Utley: That's the one that processes the source image. It creates the file.

Boehm: It's the digital image file.

Utley: And it may be the server.

Boehm: It may be the server, but no matter what, it would be a computer. To put it on a hard drive or to put it on a CD ROM, right?

Utley: Right.

Boehm: That's what we're getting at here. It's the processor. It's the encoder, isn't it?

Utley: Yes.

Bernstein: Yes.

Boehm: So could it be a personal computer? Sure. It could be any of these he's got.

Bernstein: Yep.

Boehm: So, he's correct so far without changing.

Bernstein: Right.

Boehm: "Computer 22 includes a CPU, a ROM, a RAM, a display device, input device..." I would...he's defining it there. I would say, "...typically includes."

Bernstein: Yeah.

Boehm: Because it may be missing one of those.

Bernstein: Yeah, absolutely.

Boehm: "...typically includes..." blah, blah, blah. Good. "... computer. It may also include any other hardware device..."

Bernstein: That covers it all.

Utley: I've got to go back to page 7, because we made a change I don't think we should have.

Boehm: I'm still on 7.

Utley: Okay. Line 17. "Computer" is correct—we shouldn't put "user" there.

Boehm: You're absolutely right, but I can't call it computer 22 yet.

Utley: You're defining the processing unit.

Boehm: But the whole point of the paragraph is to say print film versus digital, and this print film is going to be enlarged and scanned. Alternatively, digital file is provided directly without first creating a print image. It doesn't matter where it's housed.

Utley: Right, just say that.

Bernstein: Let me ask you this. Did you ever create a case where the analog camera takes the pictures according to the right specs and puts them on the film that way, or would you have to use larger film format?

Utley: No, you can't.

Bernstein: We can't go that way?

Utley: Well, but we do that with 4x5s and fill.

Bernstein: But it's still 4x5?

Utley: Right.

Bernstein: When you've shot the picture, it's 4x5. You can't tell the camera to shoot this 10 times bigger?

Utley: No, but what you do is you scan it at different density.

Bernstein: And that gets it the bigger...

Utley: That creates the...

Bernstein: That's where I'm probably getting confused on this digital image thing. Yeah.

Armstrong: What if you just moved...what if you left line 16 and 17 alone and just moved the whole paragraph, beginning with line 21, in front of that, where you defined computer 22 before it's used in that sentence in line 17?

Boehm: Because it doesn't really flow there. What you're trying to do in that paragraph, he's says, "If the images obtained are digital..." he's describing the printing device 20 there, and that has to be described...20 has to go before 22. That's where he's introducing what 20 is.

Armstrong: Yeah, although with line 15, the sentence starting with "alternatively," that actually does not talk about printing.

Boehm: Let me read it again. I think you're right. "...if the image is obtained with a digital camera, a print image may first be obtained..."

Armstrong: What he's saying, you took a digital picture and you want to print it and then enlarge it.

Boehm: Yeah, he sends it to a printer, 20. "In this manner, print image can then be enlarged and scanned."

Bernstein: Right. So even though you don't have to...

<End Side 2, Tape 1; begin Side 1, Tape 2>

Bernstein: Tape 2, Patent Meeting, Docket 57103-120. Let's start on page 12.

Boehm: Wherever you want to.

Armstrong: And I think a lot of this is going to be totally fixed up by this change that Brian's made, or this correction that he's made, but I just want to be certain of it.

Boehm: And I'm a lot colder on that, guys, than Steve was, so just do a dump on me, make me the corrections, and I'll just do it kind of cold without analyzing it; and then when I read it again tonight, I'll see if I can...

Armstrong: Okay, the first thing Brian, I just wanted to make sure what you meant here. You want that to be VWW?

Utley: No, VIH.

Armstrong: Or VWH?

Utley: It can be either one, but I want it to be BIH.

Armstrong: Okay, well then let's talk about it because then what we're doing in the first line of this page, we're saying, "The viewing image height and viewing image width within the viewing window can be determined by comparing the source and the aspect ratio of the viewing window application." So the unknowns are the height and the width of the viewing window.

Bernstein: Viewing image window.

Utley: Why should you add aspect ratio? What it says if you compare the aspect ratios—you know what those are—

Armstrong: For the source and the viewing window.

Utley: Right. If you know what the aspect ratios are, you all you need to know is determine whether you are going to use VWH as the basis or whether it's going to be VWW.

Armstrong: Okay, so let's just say in the first that the source image aspect ratio is greater than the viewing window aspect ratio.

Utley: Right.

Armstrong: Then we're going to set the viewing image height equal to the viewing window height.

Utley: Right.

Armstrong: And then the next line, in order to get the viewing image width, we need to divide the viewing image height, which we don't know.

Utley: We do know.

Armstrong: Okay, tell me.

Utley: That it's equal to VW and VWH.

Armstrong: Oh, okay. So we're really saying the same thing?

Utley: Yeah.

Armstrong: Right, we're saying the same thing.

Utley: Yeah, but this is mathematically correct.

Armstrong: Okay, so we are saying the same thing.

Boehm: How about grammatically, Brian?

Utley: Pardon?

Boehm: But I'm partially kidding on that, but when you use the phrase "target image size," go to...well, you don't have...

Utley: Let's come down...

Armstrong: Let's come down. Let's say if that's false.

Boehm: My question is the language. You say on line 23, 24..."a target image size TIS has a TIW and a TIH." Does that make sense to call the window a TIS or a VWS for size? It's the same concept-width times height equals something. You want to call it area? That's even clearer.

Utley: Yeah, size and area are interchangeable.

Boehm: Well, maybe we should say that the target image area-TIA. "Having a target image width times the height..." That's beautiful.

Utley: They're interchangeable, so it'll work either way.

Boehm: Okay.

Armstrong: Let's just continue.

Utley: Let's say we're defining size as area, size is total number of pixels, which is area.

Boehm: My only question would be can I make the...at the top of page 12 where you said, "...the viewing image height, gauge, and viewing image width (VIW) within the viewing window area..." VWA?

Bernstein: Yes, that would be very clear.

Boehm: Yeah. You're also consistent with the target image area, but am I doing the wrong thing here, Brian, because you used VW earlier. Are you using it consistently?

Utley: Yeah.

Armstrong: Yeah.

Utley: Yeah, it's consistent.

Armstrong: See, just continuing with my thought pattern in the [us?] statement, I would just reverse the order of these and put VIW.

Utley: It's right there.

Armstrong: Okay, okay.

Utley: So if you pick it up off the computer copies that I sent, it's correct.

Boehm: Oh, okay. Is that what he did? Just plugged it in?

Utley: Yeah, this is what I sent him last Thursday.

Boehm: I see.

Utley: I had written it. This is where it was transcribed.

Boehm: Okay, well clue me in where this started, Brian.

Utley: So you go down to...

Boehm: Is this page 11 on your sheet, or not?

Utley: Page 1 on the aging process.

Boehm: We're at page 11 of the text. The formula starts on figure 7.

Bernstein: Yeah, you've got to go back to 11 and start him at figure 7.

Boehm: Yeah, start me off here so I don't blow this.

Bernstein: Right, he wants to get every term.

Utley: Oh, okay. On page 11, we define the aspect ratio.

Boehm: Right, which is on page 1 of your new...

Utley: Right, got it.

Boehm: Okay, that's what I wasn't sure. Brian, you still want me to use his text because it looks like...

Utley: Yeah, his text is fine.

Boehm: Yeah, it looks like he added words to your...

Utley: Yeah, no, he expanded...

Boehm: He expanded to make it readable.

Utley: Right.

Boehm: I see what you're saying. But the formulas, let's go through each one of the formulas and make sure they're correct, right?

Armstrong: That's what I'd like to do now before I run out of time. Brian, down in...you're on 12?

Utley: Yeah, right.

Armstrong: On 12 when we, after line 25, when we start talk about these equations, the statement here I don't see as being expressed right. Now I could be wrong, but the $TIS = \text{the } TIW \text{ times the } TIH$, agreed; but that also equals VIS times the magnification factor.

Utley: That's correct.

Armstrong: When I re-do this formula, I understand that the magnification factor is VIS/TIS .

Utley: No. Not true. The magnification factor is TIS/VIS .

Armstrong: Actually I had it the other way- VIS/TIS .

Utley: TIS/VIS .

Armstrong: It's the ratio of the viewing image to the target image?

Utley: Right.

Armstrong: So it would be VIS/TIS .

Utley: What's the ratio?

Armstrong: It's got to be one over the other, so we express it right.

Utley: It's the TIS divided by the VIS .

Armstrong: Okay, let's go to line 19. Then this is stated wrong: "The magnification factor is defined as the ratio of the viewing image to the target image." So that needs to be reversed.

Boehm: Right, but that's word for word what you had on top of page...

Armstrong: So it's defined as the ratio of the target image to the viewing image. Okay, so those need to be reversed, in which case we've got $TIS/VIS = MF$. If I'm solving for TS, I've got $TS = VIS * MF$. Now you're right. So down below is fine.

Boehm: Yeah, because the target is going to generally greater than the viewing image window.

Bernstein: Yeah, I just couldn't reconcile the formulas because of that transposition, that's all.

Boehm: Brian, what are you rationing? The size? The area?

Utley: You're rationing the area.

Boehm: The area.

Armstrong: And I like that clarification because it's...

Boehm: Didn't we way it's the ratio of the areas, or of...you mean the ratio of the viewing image area to the target image area?

Utley: Yeah, because when you magnify, you magnify an area. Magnification [is an aerial?] a function.

Boehm: Excellent.

Armstrong: So height time width is area, which would be good every time we referred to target image or viewing image, we called it viewing image area or target image area.

Utley: Yeah. The only reason why I picked size instead of area is because we talk about aspect ratio, and you begin to use the A...the A shows up in a number of different forms, and therefore I didn't want to confuse you with A in one being A, aspect ration, being the same as A in area. That's the reason why I did that.

Armstrong: Okay.

Utley: But we understand that area and size are synonymous.

Boehm: Let's just get rid of the A in aspects and make it SIR. That solves your problem, and then everything else is also...

Armstrong: That's right.

Boehm: ...three digits, right?

Utley: That's okay because that would define aspect ratio as R.

Utley: Yeah, that's fine.

Armstrong: And it goes on line 4 as well.

Utley: Yeah, all the way through.

Armstrong: Again, Doug, just in the interest of time, I think what I'd like to do is apply the semantic changes to the text after we've made sure that some of my math questions...that Brian and I are on the same page before I have to leave.

Boehm: And I'm not even sure we'll have to do that because I have to go through it when I do the edits here, and I will do the same thing that you are doing and make sure it makes sense.

Armstrong: Okay. On the top of page 13, then, what I was able to determine from this and confirm with Brian is that the source image aspect ratio is equal to the target image aspect ratio. The question is was this intended because, and we started to have this conversation, is that we may not have...we may crop photographs, we may want to stretch a photograph...

Utley: Let me explain how that works. First of all, in the image sizing program, you have the ability to change the size of the source image from a standard image. In other words, if you are cropping, you can specify the crop, and it will give you the right dimensions and it will fit it into the viewing window. So a cropped image...

Armstrong: But it lost data. When you crop, don't you cut away a piece of data?

Utley: It's before you get data. It's while it's still an image.

Armstrong: So it just smushes it in right?

Utley: Yeah. It puts it into the viewing window properly. So you can specify a cropped image source without any problem. But the case that isn't covered yet...there are two cases that aren't covered yet. One is where you digitally crop an image, okay, which you can do. You can get there, but you have to know how to get there. The second is, we have not covered the case of the panorama or stitch images.

Bernstein: But it's all one image in the end.

Utley: I know, but we want to cover the case of the dimensions because it assumes that you always fit the image into the viewing window, but in the case of stitched images, you don't.

Bernstein: Why?

Utley: You let the...

Armstrong: The image flows beyond it.

Utley: The image flows beyond the edges of the viewing window.

Armstrong: It does?

Utley: Yeah.

Armstrong: When you first look at a Hyatt Hotel pool shot, you don't see the whole shot. You see one shot, and then you pan around it. So you're not fitting the whole image into the viewing window.

Utley: Right.

Bernstein: We never were. Prior Art does that.

Boehm: On a photo you are.

Armstrong: And a Prior Art also gave you the ability to do that.

Utley: Yeah.

Bernstein: But on a MAC standpoint, he's not creating that formula for fitting a panoramic image...

Armstrong: Into a viewing window because you don't do that.

Bernstein: Gotcha.

Boehm: What do you do in terms of actually doing the math, Brian?

Utley: When I get that built into the image sizing program, what it will do is it will size the panorama into the viewing window vertically, and then it will allow you to pan horizontally across the image.

Boehm: Or vice-versa.

Utley: Theoretically, yes, although we don't have any examples of that.

Boehm: What happens if you wanted to...well, panning bigger, if you want it bigger...

Bernstein: You could do what you're saying and pan vertically and horizontally, we just don't do it.

Utley: But if you did that, then what I'm saying is you size the image into the viewing window so always see one dimension completely until you start zooming.

Boehm: My suggestion is that we don't...of course, we're not going to worry about that today, we don't have the time to do that. When we get to the end of this, then we'll say, of course, when you stitch images together to do pick your pan, you would first do the small size, and then whatever.

Utley: Right.

Boehm: We'll just handle it because the point of this math is to give us a basis for putting technical definitions into the claims if we run into the problem that we need it during prosecution.

Utley: Not only that, but it's also very helpful when we're talking to...when we're doing due diligence and we're talking to people about how does it work. This is how we sit down with them and say here's how it works. This is not something that's off the seat of the pants. This is something that follows a disciplined structure.

Boehm: Absolutely, and that buys you credibility.

Utley: Right, and then when we license someone, this is part of the documentation.

Boehm: The biggest thing is is it the best mode? Remember, we have to disclose the best mode of making and using your invention.

Utley: Yeah, and this is the best mode.

Bernstein: This better than blowing up images.

Armstrong: Let me just further throw into this source image aspect ratio equaling the target image aspect ratio for a second. I've got just an example written on the side with those people in a box. If we start with the small image here, which is a 6x8, and we blow it up to an 8x10...that doesn't matter, we end up with a source image that's 4x5, and then we just make the target image 4x5, right?

Utley: Right.

Armstrong: So it's not that one is...because the little one is not the source image, it's the bigger one that's the source image after we've done the cropping.

Bernstein: No, that's the target image.

Armstrong: No, that's the source image that goes into the system. Then we create the target image.

Bernstein: No.

Armstrong: Yeah, this is before it goes in.

Utley: If the source image is, say, at 8x10, what the formula does is tell you how to scan it so that you arrive at the right target image. So if you go down further, it says, "And, by the way, if you follow the program, the program says the right scanned density for this is this many pixels per inch," and that will produce you a digital image which has a magnification factor...

Armstrong: That's the next step. I think I know the answer to this, but in this example, which of these two things is considered the source image?

Utley: The source image is the 8x6.

Armstrong: The target is the 8x10?

Boehm: We have to define that, guys.

Armstrong: Okay, hold on because we've got...let me just follow this math. I just want to understand why I'm wrong here. In the source image then, we have an aspect ratio of 3:4 on an 8x6.

Utley: Because it's a portrait.

Armstrong: It's a landscape.

Utley: Okay.

Armstrong: This is a picture of my kids on the beach, but I want to frame it in a portrait frame, so I'm going to go in and I'm going to crop the edges and turn it into an 8x10 and blow it up.

Utley: Where do you crop it?

Armstrong: I'm going to crop it on the scanning program, let's say. I've got a print image, and I'm going to throw it on the scanner. I'm going to throw this on the scanner. I'm going to crop the edges of, blow it up to an 8x10.

Utley: You don't do that on the scanner. You don't blow it up on the scanner.

Armstrong: Okay, well let's say then I blow it up on a...let's say I blow it up before I scan it.

Utley: Right.

Armstrong: And then I crop it. I end up with an 8x10, which is an aspect ratio of 4:5.

Utley: Right. It's not portrait.

Armstrong: It's not portrait?

Utley: Right. 5x4.

Armstrong: Exactly, right, 5x4. I did that backwards. So now I've got...

Utley: An aspect ratio of 1.25.

Armstrong: Right, I've got a three-quarter aspect ratio for what you're calling my source image.

Utley: No, you've got...I don't know anything about that. All I know is that is this.

Armstrong: This is the source image. That's why I asked you which one was the source. This ends up being the source. <Everyone talking at once.> ...the original picture...

Utley: I don't know anything about that.

Bernstein: Why?

Utley: Because what you put in the scanner, the system considers to be the source image.

Armstrong: Although there is a step here...

Bernstein: Well, this is what I was putting in the scanner.

Armstrong: There is a potential step here is not a part then...

Armstrong: Because then the enlarged image is the source image.

Utley: Right.

Armstrong: Because there's a step before digitizing that says we can take an image of any size, create the ultimate source image from that in any dimension you'd like via cropping and enlarging, and then we will end up with what we are calling in these formulas a source image. But we don't talk about this. I don't know if it's important, but it's a step that confused me.

Armstrong: Brian's saying it's not important.

Armstrong: It's not important to this formula; but what I'm wondering if it's important to our process.

Bernstein: Well, certainly it's part of the process.

Utley: Well, no, if you go back through and you understand this, what your controllables are, what your scan density is, what your aspect ratio is, how you fit it into the viewing window, what your target size is, and if you know all of that, you can determine the trade-off between your ultimate source, whatever that be, I know nothing about that, and what you put in your system.

Bernstein: I recognize that. I'm one step before that whole process, and now we're taking ourselves outside of the math, and then we can table this and you guys can talk about it later. You just told me that this lower image is the source image.

Utley: Right.

Bernstein: Yet it's not what the client gave me. The client gave me this picture. Greg Manning gave me a baseball card with a whole bunch of header information and said take the header out, give me just the picture of [Newell] Lowell or whatever his name was...just the picture. So, I don't know if we want to include anywhere, if it's important, the step that is our editing of an original image before it becomes what we are calling a source image. That's all. And let's leave it there for right now.

Boehm: That's the same problem I was confused with, and when I look at Brian's figure to say that the target image is surrounding the viewing image, I get confused as to what he means by the target image.

Utley: Well, the target image is the file...

Boehm: What's the word "target" mean?

Utley: Because what you are doing is you create a virtual image into which you zoom and pan. It is a virtual image.

Boehm: Oh, so you're targeting to the virtual image?

Utley: Yeah.

Bernstein: Or you're targeting that big [].

Armstrong: What you're talk about is semantics, and I had the same conceptual problem on my first read, understanding the difference between target, source, and viewing.

Boehm: And viewing, yeah.

Armstrong: And that's something you guys can talk about, and that's just really a global change in semantics if you decide to do that. But I'd like to move onto the next question I have that's formula driven, and it's the scan density.

Utley: Right. It's not in here, it's on the image sizing program.

Armstrong: This?

Utley: No, the other one that I have where you put in your parameters, and it automatically computes.

Boehm: You can use an Exel spreadsheet with macros to do that with code. We have not written an application on that yet.

Bernstein: Well, that should be here.

Armstrong: Yeah, because we reference it. We reference...

Boehm: You reference the program?

Bernstein: We reference the math.

Armstrong: In line 11, we're talking about how we determine a minimum scan density, and we actually have a formula here, which I don't understand.

Utley: The minimum scan density says that you will scan at that DPI or...

Armstrong: That's height, or is it area?

Utley: No, it's scan density.

Armstrong: Okay, let's look at this formula then.

Boehm: Where are you? What page?

Armstrong: I'm on page 13, line 13.

Utley: It's the ratio of the source image height to the target image height.

Armstrong: Just height? There's no width...

Utley: No.

Armstrong: ...in there at all?

Utley: No, because you've got a fixed aspect ratio. The two aspect ratios are the same, therefore it doesn't matter. And if you try to use area, it's a square function, so it doesn't give you the right answer.

Armstrong: And does this end up giving us the dots-per-inch result?

Utley: Yeah.

Armstrong: So if I've got a height, then you're saying we're expressing the height in terms of pixels?

Utley: It can be either in inches or in pixels. Typically it's in inches because when you want a...your scan density is when you're scanning, and you're scanning is in...

Armstrong: Okay, then let's use an example I put here. If we have a source image of an 8x10, and our target image is going to be...let's fix this and call it an 80x100 so we keep the same aspect ratio...

Utley: Right.

Armstrong: We then end up with an MSD of the height...

Utley: Your target's going to be in pixels.

Armstrong: Okay, well this is what I want to clarify, then, because that doesn't say it. So the target...

Utley: The target is always defined in pixels. It says area in there, but it's always pixels.

Armstrong: Okay. But we don't always use the TIH in a formula in a pixel form.

Utley: You always use it in pixel form.

Armstrong: We do?

Utley: Yeah. That's the only way it's ever expressed.

Armstrong: Even up in these formulas and everything?

Utley: Yeah.

Boehm: Does it have to be in pixel? Can it be units?

Utley: No, it has to be pixels.

Armstrong: And the viewing image width is always in pixels?

Utley: Yep.

Boehm: Viewing target but not source?

Utley: Well, the source is whatever medium the source is in. If it's a 4x5 piece of film or an 8x10 enlargement, or whatever.

Armstrong: Well, let's follow this through then. So...

Bernstein: Then that's not a source image. The source image is what you create by forming the 4x5.

Armstrong: That's something we need to clarify.

Boehm: Exactly.

Armstrong: We need to be able to say the target image in these formulas...or to calculate them, target image heights, widths, and sizes are all...

Utley: Viewing window is in pixels, height in pixels. Okay. Source image generally in inches. I mean, I laid that out.

Armstrong: Okay. It wasn't in this one. But let's just look at this for a second. What would the number of pixels be on something like this if I've got 80"x100"? What would 80" be in pixels?

Utley: That's probably around 8,000.

Armstrong: 8,000. So we've got 8,000 pixels divided by the height of the source image is 8, so we have a scan density of 1,000.

Utley: Right.

Armstrong: Okay. That works. Fine. Okay, example 1. Let's go to example 1. Your assumptions, for example, you want to change from this sheet to the next, Brian?

Utley: Right.

Boehm: Are we doing example 1 of the...

Armstrong: On page 13, beginning on line 17.

Boehm: Are there changes, Brian?

Armstrong: Perhaps. We're going to go through it.

Utley: I'll look at it and see.

Boehm: Why don't we just go to the example 1 in your new?

Utley: Okay.

Boehm: Unless it's the furthest.

Armstrong: It's not furthest. Okay. So we've got a source. Everything's the same here. 320x48 is 400 pixels. Viewing image size is equal to 128. Target image size is equal to 2560. Good, we've got the square root in the formula now. The 1789. Target image height is 1431. Minimum scan density, I think is wrong.

Utley: No, it's not.

Armstrong: The minimum scan density is said to be...

Utley: You multiply the minimum scan density...

Armstrong: Right, but let's just do the formula. The minimum scan density is what? Defined as the target image height, which is what? 1431, right?

Utley: Right.

Armstrong: Okay. You have 1789.

Utley: Oh, I'm sorry. The target image height...you start with the target image width...you can do it either way. It's 1431 is the target image height.

Armstrong: Right. That's the formula. So in order to use your formula, it's 1431 divided by what?

Utley: By 4.

Armstrong: Not by 5?

Utley: No.

Armstrong: Okay, so that's just a general correction. You actually end up with a very similar answer, mildly different by only, I think. .75, but it is different. Oh, no, you don't. You get...wait a minute. <reading to himself> ... is the target image height in example 1...it may just be a rounding function...

Utley: It is.

Armstrong: But as we show the math, we should show it consistent with the formula, right?

Utley: Yeah. What does it say?

Armstrong: 357.75.

Utley: Right. Just round it up to 358. There are no such things as fractions of pixel settings.

Armstrong: $1789/5 = 357.8$, so it's slightly different, so that's why...

Utley: It's not different. You can't have a fraction of a pixel.

Armstrong: Don't get upset about this. You have an error in the way you show this, and all I'm doing is pointing out that we can't have it in the patent that way. We have a formula that says it's height divided by...it should be 1431 divided by 4. We just went over that on the previous page. That's all I'm saying. Either way, we need to express it as 1431...that's all I'm saying.

Utley: I see what you're saying. I understand.

Armstrong: Do you have that, Doug?

Boehm: No, I'm still trying to figure out...

Armstrong: Okay, look on his new sheet.

Boehm: Yeah.

Armstrong: The only correction to his new sheet on page 1 is the second to the last line. "The minimum scan density equals 1431 divided by 4 equals 358." That's the only change.

Boehm: Okay.

Armstrong: Now, let's see...did I have anything on this one?

Boehm: Good catch, Jim. Thanks.

Bernstein: On 2, I think we have the same file [].

Boehm: What?

Bernstein: We're best friends for this very reason. I sucked in math.

Armstrong: This one's just the exact same thing on 2 where we're just using the wrong number. We get the same answer, but we're using the wrong number. The minimum scan density, second to the last line, should be 1431 divided by 4 equals 358.

Boehm: Which is the same...

Utley: It's the same number.

Boehm: The same fixes as...

Armstrong: Exactly. Same number, it's just the equation is expressed incorrectly.

Boehm: It's the same text...the same change we made to example 1.

Armstrong: Exactly, exactly. In the middle of that example 2 on page 4, there's a statement that says, "The target image size equals the viewing image size times twenty." I can't find where that relationship is defined in a previous example where we say that the target image size equals the magnification factor times the viewing image size. And if it's not, we need to just put it in because it's obviously right, it's just not stated.

Boehm: On the top of page 2, when you define magnification factor, and you're saying it's a ratio of the viewing image to the behind-the-scenes target image, so it's going to be a less-than-a-one number. See, we're getting targets and viewing screwed up. The terminology, I think, is screwing us up, right? Because weren't you using magnification factors of twenty? That would have a viewing image of twenty sizes larger than the target image.

Bernstein: That's what we found last night...

Utley: No, the magnification factor is the...the target image size is the viewing image size times the magnification factor.

Boehm: Right, how do you define the magnification factor...oh, that's what...the viewing size...

Armstrong: But in the patent pages, do we have that, Brian, somewhere? Because I looked for it, and I couldn't find it.

Boehm: It's page 12, the middle, it's where he defines magnification factor, and it's not where it should be.

Armstrong: Right, but I don't see it there.

Boehm: "...ratio of the target..." we're going to call it "...the target image area."

Utley: It's down on the bottom. "The target image size is the target image weight times the..." "...which is equal to the..."

Armstrong: There it is. "...viewing image size times magnification factor."

Boehm: Right.

Armstrong: Okay, so that's the one I had a problem with because we inverted those two things, so that explains that. That's fine. Let's move on. Now, did I have anything else on examples? Example 2...example 2...

Boehm: One more point. When you say the magnification factor, it's really the maximum desired, isn't it? Magnification factor, Brian?

Utley: Yeah.

Boehm: Because magnification factor is any zoom. What you're worried about is the maximum, your deepest, right?

Utley: Right.

Boehm: Okay. So I want to make this MMF for Maximum Magnification Factor, okay?

Armstrong: Okay.

Bernstein: Where was that?

Boehm: I'll fix it. Don't worry about it. It's really at...

Utley: The magnification factor is the maximum magnification factor.

Armstrong: Always?

Utley: Yeah.

Armstrong: What about the minimum?

Utley: The minimum is 1.

Armstrong: 1 plus something?

Utley: Right. Now, then, this is what you're designing it to.

Armstrong: Page 5 of Brian's new thing...page 5, example 3. This minimum scanned density, again, I think is wrong. We've got a target image...what is the formula again? I keep forgetting. Target image height of 1610, right?

Utley: Where?

Armstrong: Example 3. 1610 divided by the source image height, which is 5. So 1610 divided by 5 is 322. So it's just the expression is consistently just reversed.

Boehm: And you're on page 5, it's the minimum scan density?

Armstrong: Minimum scan density equals 1610 divided by 5, which equals 322.

Boehm: Okay.

Bernstein: What is that last? "The photos can be any scan density greater than 321"?

Utley: As long as you scan at a higher density than that, you will never pixilate.

Armstrong: Since we get to this answer here, that's his conclusion. You have to be at least 322...321.

Bernstein: For that particular example?

Armstrong: Yes. That's the answer to his equation.

Utley: What this is telling you is that when you scan this image in, you've got to do...you've got to start at least at this density.

Bernstein: To get that result of 20?

Utley: To get that result.

Bernstein: I finally understand.

Armstrong: Okay, let's go to page 20 in the patent file.

Boehm: Okay.

Armstrong: It was...actually, never mind. At the bottom of page 20 where I say, "really?" I already talked to Brian; I understand completely why that is now.

<Difficult to understand; Boehm and Armstrong having a side conversation.>

Boehm: Okay.

Armstrong: And as long as this one has the square root thing in it, which I'm sure it does, then we're fine on that example.

Utley: It does.

Armstrong: Okay.

Bernstein: Doug, you're supposed to be picking up these square root issues...

Boehm: Hey, you guys are supposed to be picking this up. Actually, I was hoping you could work closer with Steve than the timeframe we had; but I'm taking the last pass at it here, so I'm going to try and get another pass at it.

Bernstein: Cool.

Boehm: And I am trying to get another pass at it, and I would have done the same number exercise that you've done for us, Jim.

Utley: <As an aside to Jim and Eliot.> Can you meet me in Philadelphia on Friday morning?

Armstrong: I think so.

Bernstein: This Friday? I don't know.

Armstrong: Well, I need to check my calendar.

Bernstein: Other than just checking?

Armstrong: Yeah. What time?

Utley: Can you pick me up at the airport?

Armstrong: Yeah.

<Continued background conversation between Utley and Armstrong.>

Bernstein: Doug, why don't you make these changes?

Boehm: Yeah, I will.

Bernstein: Start with this because I think we can pick up our changes later, can't we?

Armstrong: Well, let me give you a few more that I wasn't real sure about.

Boehm: Well, what's the...what do you think is the extent? If we go through page by page, you're right, it's going to be forever.

Bernstein: No, I just want to go through my comments real quick. If Brian has any additional, that's fine.

Boehm: Okay, and remember we can change the wording of the claim as long as it's recorded.

Bernstein: No, no, this is the body. These are minor fixes.

<Everyone talking at once. Shuffling as Armstrong leaves the room.>

Boehm: Thanks, Jim, for leaving.

Utley: <Chuckles.> He's going to catch a plane.

Boehm: Hope you had better luck than I did.

Utley: Yeah, really, and the weather here right now is pretty bad.

Boehm: Yeah, that's what it was yesterday.

Utley: Where did you get stranded?

Boehm: It's a long story. Is now a good time?

Utley: How long is it going to take?

Boehm: What happened was I left about 6:00. Everybody said it's no problem to catch the 7:25. There was a terrific traffic jam just north of the airport, bumper to bumper for miles, and it got to be 7:10 before I was at the airport. I was flying around lost, trying to find the Avis. Got to the bus at 7:15.

Yelled at the driver and said, "I've got a 7:25 flight. Can we do it?" He goes, "I don't know!" So we got in and tried it. They dropped me off at the United gate. And I dropped up the Avis car without filling it with gas, you know, just get my butt over there. I get up to the drop-off, and thinking, oh, I gotta run, and so I run like crazy to get to the get and find out different. There's a whole bunch of people standing there, you don't have to run. It's been delayed. So my flight out of Ft. Lauderdale to Chicago was delayed first of all for storms, and then mechanical problems. I got switched all over the place. 7:30, 8:30, 9:30, and you wonder what's going on. Half the people bail out and go to Miami and fly out of there, and they keep saying, oh, we don't know when it's coming. I'm thinking, oh, crap, I'm going to miss my 10:30 connection in Chicago to go to Milwaukee, so I called and found that there was a bus. There was an 11:30 bus, and I thought, hey, I'm gonna make this, no problem. The stupid plane didn't leave until 10:00, got in Chicago at 12:30, missed the bus, missed the only connection out to Milwaukee. I'm thinking the next one's 8:00 in the morning, I'll just go get a hotel, and it should be on the airline, right? Because they made me miss my connection. So I stood in line 45 minutes with other people who had missed their connections to try and get the hotel or the baggage lost or some damn thing. Here it is 1:15, 1:30, and they say...and this guy in line behind me, he's in line for the second time because they sent him in a cab off to a suburban hotel--not the Hotel Hilton, no way--some suburban hotel--sent him out there, he got there and there was no room, so they brought him back, and now he's in line again! Talk about getting doubly screwed. Anyway, I get up to the counter, and she says, well, we can send you out to Arlington Heights--and I know the area, I grew up around there--a hotel, and we've got to get you a cab, and we'll bring you back, and we'll pay for the hotel. And I'm saying, when's my flight? 8:15. I've got to be in there by 7:30. You're going to get me out there, and I would have gotten maybe three hours of sleep. It was just ridiculous. So I said, what are my other options? I'm pissed. So she turns around and grabs a pillow and a blanket and says here's your other option. Everybody is kind of fuming, but we're all taking it with a grain of salt. The guy next to me says, oh, you get the Hotel O'Hare, and you're headed over to Gate B-20? That's Suite B-20!

- Bernstein: And it is. I've done that so many times. Slept there many a night. Slept on my bag.
- Boehm: I got in here this morning, landed at 9:00, and drove to work at 9:30. I haven't been home.
- Utley: And you are feeling the same.
- Boehm: Oh, yeah, really crunchy!
- Bernstein: Okay, let me whip through this real quick. Skip the comment on top of page 9. On the bottom of 9, why can't these images from videos be put back into video format and then zoomed on? Why can't you take the images you captured in video, enhance them, and then put the 29-per-second back in, thereby have zoomable video? And panable? You can because a video is simply 29 images. So if we've captured the ability to do this on an image, we can create video by creating a series of 29 images per second.
- Boehm: Okay.
- Bernstein: It can be easily done. Here's the change. On line 21, just add: "A single or all captured frames from the video camera may be further processed as a digital image, and then reassembled back to video." Take all the frames, do...
- Utley: What are you going to do with it?
- Bernstein: You're going to enlarge them, however you do that once you capture them. If you were just printing them, you could print the images, enlarge them, put them in a viewing window, and run that video through there and let somebody zoom in.
- Utley: How do you run the video through a viewing window?

Bernstein: Doesn't the video have its own viewing window?

Utley: You run it through a player.

Bernstein: And the player has a viewing window.

Utley: And the player has a viewing window.

Bernstein: Now, if the image is bigger than the viewing window, you'll be able to...if the picture is bigger than the set viewing image, you'll still be able to...

Utley: The picture will still be in the standard frame size of 320x240.

Bernstein: They'll be in a frame size, but the picture will be much bigger than 320x240.

Utley: No, the picture can't be bigger than the frame size.

Bernstein: On a video? Why?

Utley: Because that's what you cover.

Bernstein: I see what you're saying. But would you be able to take a 20...no...and play them through...okay, scratch it.

Boehm: All this stuff at the bottom of the page?

Bernstein: No, left side.

Boehm: Just the left side?

Bernstein: And then still make the change on 21: "A single or all captured frames from the video camera may be further processed."

Boehm: But we're only talking a single frame is processed as a digital image.

Bernstein: So it won't matter if you do it multiple?

Boehm: Yeah, but you're doing single, multiple times.

Bernstein: Yes, okay, fine.

Boehm: Maybe we should say...no, single is fine. I think...

Bernstein: Is a scanning a digital enlarger to me? To my thinking?

Utley: Yes.

Bernstein: I just don't understand why?

Utley: Yeah, it's a digital...well, yeah, the way it is is you change the scan density. That will give the effect of the enlargement.

Boehm: Is that said here, Brian?

Utley: Yeah.

Boehm: Does that say that in here? That changing the scan density is effectively enlarging it?

Utley: It's enlarging it because you're increasing the number of files.

Bernstein: What you said, sir, because it confuses me!

Boehm: And not only that, we may need it. If we're practicing that...are we practicing that?

Utley: That was the whole point of going through the magnification factor and creating a scan density because you've got to create a picture large enough to be what you want it to be as a target image.

Boehm: Never mind!

Bernstein: Okay, but you see it now, right?

Boehm: Yeah, absolutely. I just didn't...

Bernstein: And to me, who doesn't understand the math of all that, it seems very strange that you can take a digital image and it's achieved everything by blowing up...

Utley: Optically.

Bernstein: ...optically. And then you're still putting it in the frame and framing it right until it works in a zoom environment. If I could understand the math, I'd understand that. I understand the theory.

Boehm: Brian, I know what I'm talking about.

Utley: I never questioned that! <Laughter>

Boehm: I do, all the time! No, when I'm thinking enlarging, I'm thinking of analog development enlarging.

Utley: Optically.

Boehm: Optically enlarging, not digitally enlarging. Are you digitally enlarging the photo when you up the scan density? No.

Utley: Let me give you the ...

Boehm: You're upping the scan density.

Utley: Yeah. If you enlarge a photograph, you can set it at a lower scan density than if you don't, then you have to scan at the high density to get the same result.

Boehm: Exactly. That's why I don't think that a scanner is technically an enlarger.

Utley: It performs a function. Because it has a variable scan density...

Boehm: Yeah.

Utley: Enlarging is better [in] the size of the file that is produced. And the size of the file is proportional to the size of the image.

Bernstein: Oh, I see. I see it! It has to be. It effectively does the same thing.

Boehm: Yeah, I guess the scanner can do enlarging, yeah.

Utley: It can produce two different-sized files based on the same photograph being scanned at two different densities.

Bernstein: Which is two different sizes. You see, the brain doesn't think that. You just think 600 versus 900 just means more dots or something. Period. It doesn't mean that you have more area.

Utley: That's right.

Bernstein: But is it?

Utley: When you have more area, you scan at a lower density. You scan at 200 DPI versus 600 DPI.

Bernstein: But what if there's no scan, no density...the camera does that?

Utley: Then it's fixed by what the camera does.

Bernstein: Can you set the camera to be the enlarger?

Utley: No, you have very little control over that. When you go through the digital example, that's what happens.

Bernstein: What?

Utley: You say, well, I got this digital picture, and I want to get a 20-times magnification, and you go through the math and it says "stop!" You can't get 20 times; you can only get 11.1 times.

Bernstein: Why?

Utley: Because you can't get more pixels in the target image than you've got in the source.

Bernstein: So how do you achieve 20 times?

Utley: You have to have better digital equipment.

Bernstein: Okay, so you can buy a better digital camera that gives you more [pells?] for the shot?

Utley: Right.

Bernstein: And as that comes due, that's going to give us greater magnification.

Boehm: Brian, if you took a normal enlargement on a photo, you will keep enlarging until you get the grain level of the photo.

Utley: Right.

Boehm: On a scanner, you won't keep enlarging...I mean, you're going to hit the grain level of the photo, but it's going to be limited by the scanner.

Utley: Well, yes, there are some limitations. For instance, ...

Boehm: An optical one is never limited by the optics, right?

Utley: Yes, optics have limitations.

Boehm: Okay, but way far...

Utley: But what happens is the scanner can't put detail into a picture where it isn't in the picture. So you can take a snapshot, for instance, and try to scan it at 1000 DPI, but it won't look any better than if it was scanned at 150 DPI because that's all the information there is on the image that you can resolve. In other words, you have been destroyed by the processes that printed it. But if you take a transparency—the original source transparency, whether it be a positive or a negative—you can scan that at a very high density, and you can get every bit of information that there is to be obtained by increasing the scan density assuming that you have a scanner that is capable of that.

Boehm: Yeah, with no limitations. Yeah, you're right.

Bernstein: So, should we say all of that?

Boehm: The math is saying it, you just have to sit back and think about it.

Bernstein: Okay, that's good.

Boehm: But you're right, it would be a good thing to say. If you could...

Utley: That's why the math is there.

Boehm: But Brian, if you could say that in English, it would be even better. If, after we cut the phone call, if you wanted to jot a note...

Utley: My brain doesn't work very well in English. <Laughter>

Bernstein: Do you want English American or English British? Let's define that. Let's go right here and define that because that is important.

Boehm: Okay, so what we're saying is that by increasing the scan density, it effectively...well, first of all, what is it actually doing? It's more data or pixels per image which lets you magnify deeper or more...

Utley: Let's back it up. What we want is a large enough...our objective is to get a large enough digital image file to permit the zooming and panning at the desired magnification to take place. There are two ways to obtain that size file. One is by enlarging photographically and scanning at a relatively low density, or by that the source image is of sufficient precision to scan at a high density to create the same size file.

Boehm: But, wait, you don't scan, if it's digital. If you have a digital, you're not...

Bernstein: Wow, you see, you've got to clarify two things: scanning and digitally shooting the photograph with the right specs.

Utley: When you scan, you create a digital file. Alternatively, you have a digital camera which gives you a fixed file size.

Bernstein: Although later in the future, you should be able to do inside the digital camera what you're doing with the scanner, and create, when you get a good enough [pell] count, so to speak, right?

Boehm: But it's technically not scanning, it's the digital files coming directly from the camera is what he was trying to get across.

Bernstein: But it's creating a size.

Boehm: What?

Utley: The end result is to have a file which is sufficiently large...the file of an image when expressed in [pells?] has a large enough area to allow you to zoom into the image and obtain the desired level of magnification.

Boehm: Without pixelating.

Utley: Without pixelating.

Boehm: Okay, that makes perfect sense. Now, when we were talking about a scanner being essentially an enlarger, if you...you see, when I think of a scanner, I think of analog to digital. It's taking optical and digitizing it. It's doing the capturing.

Bernstein: Right, but...

Boehm: On a digital camera, the [CCD] is doing the capturing.

Utley: Which is an array.

Boehm: Which is a scanner. I see what you're saying.

Utley: Right. It is a scanner. Now, the...

Boehm: The scan density number you're spitting out for your HP scanner or for to go buy a new proper...

Utley: No, you can control the scan density of a scanner. You can determine what your scan ratio is.

Boehm: Of a scanner?

Utley: Yes.

Boehm: But not of a digital camera yet.

Utley: No.

Bernstein: Sure. You can go from 300 DPI to 600 DPI.

Utley: Not on digital cameras.

Bernstein: Sure. On my digital camera, I can set it to 300 for low resolution, to high of 600.

Utley: Yeah, but when you do that, you're getting a .JPG.

Bernstein: Right. Or bitmap.

Utley: It doesn't give you both bitmaps. I think it only gives you one bitmap, which is your maximum density.

Bernstein: Well, the highest, 600, is a bit map; the other one is...

Utley: Right. The other one is a .JPG. That's right. That's absolutely right. But there's only one bitmap. You can only go to one bitmap size now. Even the new Nikon 990, it only gives you one size bitmap.

Bernstein: It does?...

<End Side 1, Tape 2; begin Side 2, Tape 2.>

Missing huge section

Utley: You said in the compression step, there are a number of options that you have to tailor the compression process. You can give the compressor a target for how much compression you want. You can also specify to the compression program the size of the compressed image, and that's important because what you do with the image sizing program, the image sizing program will tell you what the size of the compressed image should be to create the target image. Therefore, you instruct the compressor to create a compressed image of that size. Remember you had a minimum scan density?

Boehm: Um, hum.

Utley: Typically, you will scan at a higher density than the minimum scan density, maybe 10%, maybe 20%. So now you have to take that digital file and create a file which is equal to the target image, and you do that by telling the compression program that's what you want. If you didn't have a compression program, then you would try to scan as close to the minimum scan density you could so as to not create a bigger target image file than you needed.

Bernstein: Okay, now, I didn't totally understand that. He then says compression serves to preserve image resolution. Is that a true statement?

Utley: Um, hum.

Bernstein: Thereby providing an optimum enhanced digital image. Optimal is no compression.

Utley: Well, it depends on what you mean.

Bernstein: Well, did you see the...17 going to 18?

Utley: You made the optimizing file size.

Bernstein: But then that needs to be defined here. Do you follow that, Doug?

Boehm: Yeah.

Utley: By optimum, we really mean optimum file size here.

Boehm: Yeah, since the number of pixels is not actually reduced.

Bernstein: No, actually if you size it, they are reduced.

Utley: If you specify a small number, yes. What you really try to do is optimize the file size at the appropriate number of pixels.

Boehm: But the number of pixels changes when you .JPG it...I mean, when you compress it or .JPG?

Bernstein: No, when you compress it and resize it.

Utley: It's optical.

Bernstein: If you're compressing by resizing, you've lowered the pixel count. If you're compressing 1:1, you haven't. Do you follow? So Brian's saying you might have a large image and the compressor says, what do you really need here? Let's get rid of some color. Do you need all this extra size and that height and width? And if not, it does all that for you. Lowest makes the smallest picture, thereby reducing pixel count and providing a less-than-optimum enhanced digital image.

Boehm: Help me figure out what that sentence should say.

Bernstein: I'd strike the whole sentence, to be honest with you.

Boehm: That sounds fine with me. Will we ever need the concept that we preserve the number of pixels, at least at the 1:1?

Bernstein: No.

Boehm: Through compression?

Bernstein: No. Compression is optional. Do you know what I mean?

Boehm: Okay, scratch the damn sentence.

Bernstein: Yeah, okay. Good. I see that we can explain all of this. I would just leave it right after "...be set to other compression factors..."

Boehm: Yes, absolutely. That's the end of the sentence, end of the paragraph.

Bernstein: Exactly. That "64 user interface or control data is associated with enhanced digital image file if necessary and may already be on the user computer."

Boehm: You got it.

Bernstein: It's still associated, even if it is on his computer, so that, in this sense, you might be right here, because you still need to associate the control data user interface with the picture. So that's true.

Boehm: So I'll move your comment down to clarify it later.

Bernstein: Okay. And the only other thing is right after you say on line 6: "...graphic user interface on display upon loading..." Forget "downloading" and just put "loading of the image."

Boehm: Okay.

Utley: Doug, I can give you the wording that I used. At the bottom of page 17, in place of that last sentence which spills over it, I said, "The target image dimensions can be set as parameters for compression thus ensuring an optimum enhanced digital image."

Bernstein: One more time?

Utley: "The target image dimensions can be set as parameters for compression, thus ensuring an optimum enhanced digital image."

Boehm: But what are we optimizing?

Utley: File size here.

Boehm: The file size?

Utley: We're getting the maximum image quality and minimum file size.

Bernstein: For what we need to achieve. That's right. That's fine. Because that's here...

Boehm: "...thus ensuring optimum quality and file size"?

Bernstein: You're not ensuring any optimum qualities by compressing. You're actually decreasing quality at that point.

Boehm: That's right. So, "...thus ensuring an optimum compressed file size"?

Bernstein: Yes. "...compressed file to image size," right?

Utley: No, file size.

Bernstein: And that does say it, by the way. Okay. Now, go down to line 8: "Image file []. The user interface program is associated with the enhanced digital image file such that the combined"...take "download" out...

Boehm: Okay.

Bernstein: "...the combined file or files..."

Boehm: Well, it's not combined if it's files.

Bernstein: Well, no, it could be three files, or it could be all packaged into the image file someday. We don't know.

Boehm: Well, I've got to define that better when we hit the claims because I'm thinking about not...we're claiming that we're...that the end product is a file, an enhanced file, and then we get lost in the mucky-muck when we say what we are really providing. We're providing a .JPG and an applet.

Bernstein: Well, we don't have to provide...they just need to combine somehow. We don't need to provide all the elements.

Boehm: Yeah. The ultimate thing that we provide may not be a file—an enhanced digital image file—does it have to be a file?

Bernstein: An enhanced digital signal?

Boehm: Data?

Bernstein: Data?

Boehm: Or signal.

Bernstein: Yeah, okay, so make that global change. That's fine. It doesn't have to be a file necessarily.

Utley: No.

Boehm: Well, it would have to be digital data, though.

Bernstein: Right.

Boehm: It doesn't have to be an analog signal.

Bernstein: Right. That's true.

Boehm: So I don't need the word "signal."

Bernstein: But you might not have to save it as a file at some point in life.

Boehm: Well, data incorporates if it's a signal or not because the data would be on the signal, right?

Bernstein: Perfect.

Boehm: So I don't need signal because I don't want to go analog on people.

Bernstein: No, I understand. "The combined files, like computer [], will automatically launch the graphic user interface.." It doesn't have to automatically, but it can.

Boehm: Okay, "can."

Bernstein: Right. "...decompress the digital image data and display a portion of the digital image data within a viewing window having a predetermined viewing size."

Boehm: Okay.

Bernstein: Correct? Putting in a portion of the data.

Utley: Actually, when it comes up, it tries to present the whole image.

Bernstein: But in those virtual tours.

Utley: That's right.

Bernstein: So we want to say "a portion of," or "the entire or a portion thereof."

Boehm: "...at least a portion..."

Utley: "...at least a portion..."

Bernstein: There you go. Okay. Skip now to the next page. You've got my seamless word there, but I don't want it.

Boehm: Don't want seamlessly, huh?

Bernstein: Doug, but you say "...to or from a host computer..." on line 11 "...a Web server, Web site, or a Web page...."

Boehm: Um, hum.

Utley: TV?

Bernstein: I don't know if you want to throw it in there.

Boehm: I'm lost where we are in terms of...

Bernstein: Page 19, 11.

Boehm: We're at figures 3, describing the flowchart of figure 3?

Bernstein: Right.

Boehm: Which is what...oh, great. Is that what that says? Oh, it's not a flowchart, it's an image...figure 3 is an image. <Reading out loud to himself; quickly and maybe not completely.> "Referring to figure 3, an exemplary screen print is this. Once the user interface...the resulting image is ready for uploading to a network server projection..."

Bernstein: Well, that was not my thing. "...the resulting image can be uploaded to a network server..."

Boehm: That whole thing, Eliot, on that, you kind of have to take it with a grain of salt because all of the...this is the description of the preferred embodiment.

Bernstein: Okay, okay.

Boehm: It's like the background.

Bernstein: That's what we did. That's fine, that's fine.

Boehm: This is really preferred.

Bernstein: I know, you see what I'm doing now?

Boehm: Yeah, and that's good because that makes me want to support it more so I can broaden the claims...go somewhere with the claims. So technically, Steve's correct by saying "uploading" because it's his-preferred embodiment.

Bernstein: Right.

Boehm: But I usually say "can be" or "is" or "may be," and he doesn't like to say "preferably," but I do. It's just a semantics.

Bernstein: No problem. Go down to line 19, "...and it should be the result of a download/upload..."

Boehm: What's being...

Bernstein: "...the results of loading the enhanced digital image to a user computer..." would be the right way to say it.

Boehm: Yeah.

Bernstein: So take out the "down" and trim it to "loading."

Boehm: Yeah. The same thing to the network server. If you load it to the computer 22, it's providing it to a network server. I don't like this loading...

Bernstein: Yeah, I don't. It's very tight on us.

Boehm: Yeah, and it infers uploading and downloading.

Bernstein: I agree.

Boehm: But, again, he's right because in the preferred embodiment...

Bernstein: That's fine as long as later we clarify and make sure we're protected on all of these issues.

Boehm: <Reading out loud to himself.> "...but download of the enhanced digital image file to a user computer..."

Bernstein: And that's true in the preferred embodiment...

Boehm: But that's for load over the Internet is what he means.

Bernstein: What?

Boehm: He means download off the Internet.

Bernstein: It could be an intranet. It could be...

Boehm: The network. Off the network is what he means.

Bernstein: Right.

Boehm: But isn't it a download off the network? Because when you put something on a network, you upload through the network and download from the network. So he's right, but...

Bernstein: Yeah, you see the issue.

Boehm: Okay, it doesn't have to be. I agree.

Bernstein: Okay, and I've got that next one covered. Go now to page 20. Okay, we've got a big problem here. "The program loads additional digital image data from the enhanced digital file..." Scratch "image stored in memory, for example hard drives," and just say, "program loads additional digital image data from the enhanced digital file to the display viewing window by providing additional data from the source to the viewing area seamlessly..." or something. Or just make it a period after "...display viewing window." You follow me?

Boehm: Uh, huh.

Bernstein: "...to the user display viewing window."

Boehm: "...viewing window." Period.

Bernstein: Okay, any of that other stuff. Okay.

Boehm: <Reading out loud to himself.> "...the user computer provides the zoom..." Oh, "to provide the zoom to view..."?

Bernstein: Excuse me?

Boehm: Holy smokes. Wow, the paragraph starts out in figure 4, which is figure 4, take a look at, we're about ready to zoom or we have zoomed. He has, "The user has actuated the zoom buttons to zoom in to the digital image data..."

Bernstein: What line are you on?

Boehm: Page 19 at the bottom.

Bernstein: Line what?

Utley: The bottom part.

Boehm: Figure 4. "The user has actuated zoom buttons 88 to zoom into the digital image." Period. I don't want to say "data," right?

Bernstein: Right.

Boehm: "In response, the user interface program, which is the applet, loads additional digital image data..." Eesh, I don't like the "loads" because that says it might be loading it off the network.

Utley: Yeah, I don't either.

Bernstein: "The digital program..."

Boehm: "Provides"?

Bernstein: Yeah, because it's providing it from the enhanced digital file.

Boehm: "From the enhanced digital image file..."

Bernstein: Right. "...to a user's display viewing window."

Boehm: And then, "2. Provide a magnified view of the digital image" or "zoomed visual..." I don't like the word "zoomed."

Bernstein: Yeah.

Boehm: What I would like to say is, "Provided additional image data from the enhanced digital image file, without..." I want to make the clarification there that...

Bernstein: "Without additional ..."

Boehm: "Without another download from the network"?

Bernstein: No.

Boehm: We may not need it here if it's there before, but that's my...I may have to...

Bernstein: Put a question mark there because I see it, too.

Utley: Why can't you say...why can't you relate it to your resolution: "Provides additional image resolution data" because you're improving, increasing the resolution of the image.

Bernstein: As you zoom.

Utley: As you are zooming.

Bernstein: That's actually a great way to start the whole damn thing!

Boehm: Now he tells me!

Bernstein: No, but what we've been looking to describe, he just...

Boehm: I agree. Steve and I have this battle too because you guys weren't...

Bernstein: Struggling.

Boehm: Consistent in the terminology either. No, I agree. If you're talking length times...numbers of pixels, that is resolution.

Utley: So you're providing additional resolution data.

Boehm: That doesn't sound right to me, Brian.

Utley: Well, what you're doing is you're taking a portion of the image and you're expanding it, really, with additional pixels. So that's additional resolution data.

Boehm: Oh, I see.

Bernstein: Right.

Boehm: What you're saying is it's an adjective...it's digital data that has an image encoded with enhanced resolution. What are you providing? You're not providing resolution, you're providing data.

Bernstein: Data evaluation, necessary for the resolution.

Utley: But it's pixel-based data.

Boehm: And since it's pixel-based data, it will...

Bernstein: Or additional data for higher resolutions.

Boehm: Yeah, you're getting warm.

Utley: See, what's happening is that, to put it in discrete terms, you're going from a case where you have many source pixels per viewing window pixel, and you're reducing that ratio as you zoom in.

Boehm: Right, until you hit the pixelation limit.

Utley: Until you hit 1:1.

Boehm: Yeah. Okay, let me see if I can patch that up.

Utley: That's why you are providing additional...

Boehm: We've got a lot of clean talking about to do, so let's move on. Line 15 now, page 20.

Utley: "...greater than two times."

Boehm: "...It is important that the digital camera is configured to acquire a digital image. In this step, the camera is..." I would say, "...preferably set to the highest resolution."

Utley: I think in principal, that's what we would intuitively do; but essentially, should be generalize on that?

Bernstein: Yeah, there'll be variations on that.

Utley: Because as technology evolves...

Boehm: Right. You set the camera to acquire at least enough pixels to magnify...

Bernstein: For the magnification process.

Boehm: But if it's high resolution.

Bernstein: Right, then you get more, even if there's higher resolution available.

Utley: You see, we don't have cameras that give us very much flexibility here today, but tomorrow we'll have more flexibility.

Boehm: "...In this step..." it's possible the camera is set to acquire? "...at least enough pixels..."

Utley: Well, you notice that the camera []. The camera has a storage device. It always takes the same number of pixels; it's what it stores that counts.

Boehm: Does a user have any clue of what that is? in other words, how would I know that my camera would do a magnification of 20 on this file?

Bernstein: You don't.

Utley: What it tells you is you create a high-resolution picture or a low-resolution picture, and if you set it to high, you'll only get a few pictures for whatever your storage medium is.

Bernstein: But I'll be you later, the camera will come out with a dial-in-your-zoom feature. Boom! It'll size it and appropriately....

Utley: In fact, they're already saying if you set it at this setting, it's equal to an 8x10; and if you set it to this setting, it's a 5x7.

Bernstein: Which is doing what we're doing.

Utley: That's already happening.

Bernstein: Right, well catch them, because I doubt it was happening in the past.

Utley: It wasn't.

Bernstein: Right. So it's new camera technology that might be infringing already. Which, you know, I see it going in the scanner...all these things.

Utley: You know, sooner or later, Brian, if what you said yesterday was correct, that this is all new, the ability to do it, we'll probably get every single facet of imaging that you know have a zoom factor. Why wouldn't you apply it to every facet?

Utley: Um, hm.

Bernstein: Okay.

Boehm: We could get tripped up, though, since I'm not an expert in the camera art. It might have been done on purpose; and if our claim reads on it, ...

Bernstein: Okay, but what if it was done for a different purpose, and we have a different purpose?

Boehm: If our claim reads on what was done, and it was...

Bernstein: So it wasn't done because I mean...

Boehm: Our camera will already have the capability of providing this file, and our claim says "providing this file," we're in trouble.

Bernstein: So optionally do it. Make it dependent.

Boehm: My secretary is saying we've got to get the checks today.

Bernstein: Okay, but definitely cover that because that's what's going to happen.

Boehm: In the future to set the camera.

Bernstein: No, it's happening. According to Brian, it's happening right now as we speak, so definitely get it in here.

Boehm: "...set the camera, if possible, to the desired magnification or scanned density."

Bernstein: Correct. "...to create that maximum zoom factor." Okay, claim 1, we dealt with.
Now "providing" on line 2, we're going to make this a dependent claim now?

Boehm: I'm sorry, I lost you again.

Bernstein: I'm on page 24, claim 1, third paragraph of it, "...providing..."

Boehm: Did he skip some more math, Brian?

Utley: Beg your pardon?

Boehm: Did he skip some more math?

Utley: We just skipped over it. We've already done it.

Bernstein: I've never had to grade Jim and his math. Nor Brian's. I've got to tell you, I'm
very impressed with Brian's whole grasp of the situation of the math here.

Boehm: Oh, the analysis is great.

Bernstein: It's incredible. It helps me understand it.

Boehm: Are we on 22, Eliot.

Bernstein: We're on 24.

Boehm: On 22, do we not worry about...oh, these aren't your scribbles, okay. I'll play
with that. 23?

Bernstein: 24.

Boehm: 24. Got it.

Bernstein: Get rid of the "...size at least twice..."

Boehm: Yep, we'll do the "...greater than..."

Bernstein: "Providing" on line 8 becomes a dependent claim.

Boehm: Right.

Bernstein: Why do we have 10 times 100 times?

Boehm: Because if, again, the Prior Art happens to do it at two times but they do it...

Bernstein: Well then you should do 10, 11, 12...

Boehm: Our claim 1 is gone.

Bernstein: But then you should do 10, 11, 12, 13, 14, up to an infinite number.

Boehm: No, and here's the theory, and this is how dependent claims work, and here's the
analysis that we go through. If claim 1 now says "greater than one," if
anybody is doing it at greater than one, then claim 1 will fall. It's
dead.

Bernstein: Okay.

Boehm: If anybody's done it before, your priority date's before you. Now we move to claim
2. Has anybody done it at least ten times or at least twice will be my
next claim.

Bernstein: Right. Ah, that's where you get your "at least twice" in here.

Boehm: Exactly. If the guy didn't do it at least twice, was there a good reason? Did he
really not have the same invention? Well, hell, yes, he didn't have the
same invention.

Bernstein: That's right.

Boehm: But it just so happened that he did more than one. My claim 1 is dead, and I can now jump to claim 2, which there are at least.

Bernstein: Got ya.

Boehm: That's how dependent claims work. That's why I have dependent claims there because you can't modify claims once they're issued.

Bernstein: Right.

Boehm: The reason why Steve had all those goofy 100s, and 200s and 300s in the spec...

Bernstein: Right?

Boehm: Is because during prosecution, we have them in the claims. And if the Prior Art comes out of the woodwork during prosecution, you might have to go say, oh, well, we didn't mean that, we meant above 100 or above 200.

Bernstein: Gotcha.

Boehm: It's pretty important.

Bernstein: Claim 6, "A single data file to be two files, three files, four files..."

Boehm: Right.

Bernstein: Why?

Boehm: Well, I like that claim.

Bernstein: Well, it could be in the digital image file, I like that, but it could be two, three, or four.

Boehm: But without the claim, ...

Utley: It says you have now to literally [] everything into a single file...

Bernstein: One file.

Utley: ...and you hold that patent.

Bernstein: Oh.

Boehm: And you see, claim 6...

Bernstein: <Talking in background to Utley.> He's got it in one file.

Utley: Right.

Bernstein: [] an image file with an applet built into each.

Utley: I'm on that path.

Bernstein: Beautiful.

Utley: If I had some time to work on it.

Bernstein: I got it. <Laughter.> Is the method of claim 6—we're in the user interface—a Java applet? Why limit it to Java? There are other forms that do this.

Utley: It's already in there.

Bernstein: Where?

Utley: It says in the first claim.

Bernstein: Okay, "...providing a..." which is now going to be a dependent claim.

Utley: It's "...providing the user interface continues to display..."

Bernstein: Okay, which is dependent on it.

Utley: It then further says, okay, and it may be a Java applet.

Bernstein: Right. Okay.

Boehm: Which sort of narrows it up.

Bernstein: Right. Okay. There are other things we could name there—plug-insurance, acrobats.

Boehm: It's only limited if you enforce that claim and if the guy infringes that claim.
If it's not a Java applet, this claim won't do you any good. If it is a Java applet that the infringer uses, then you get to not only throw two claims or three claims at him...

Bernstein: What if it's Active X?

Utley: Yeah, Eliot brings up a good point. There's another technology, which is called Active X...

Boehm: Wonderful.

Utley: ...which already works with Windows, but...

Boehm: But the idea about...can you genericize that to say it's a data code segment?
What's an applet? It's a small applications program, right?

Bernstein: Right.

Boehm: Well, let's say that.

Bernstein: Okay.

Boehm: Or we could just say an applet.

Utley: You could say Active X...

Bernstein: Java applet, Active X applet, or other...

Utley: You want a separate claim. Each one should be a separate claim.

Bernstein: Right.

Boehm: What I have to say is "...when the user interface is one of the following, Java or Active X."

Utley: Or "other."

Boehm: No, I can't do "other."

Bernstein: Can you do "other" in a new claim?

Boehm: Nope. The word "other" is invalid in a claim.

Utley: <Inaudible comment.>

Bernstein: In frame 1 because the [] user interface.

Boehm: Yeah, other claims have...

Bernstein: Okay, that's perfectly fine. In that "...further comprising, compressing...",
that's optional, right?

Utley: Yeah.

Boehm: Everything here that's dependent is optional.

Bernstein: Okay. "...to a network server..." how about "to a set-top box"?

Boehm: Is that worth a separate dependent...

Bernstein: Absolutely! It's one of the raging things coming down the pipes.

Boehm: Okay, "...set-top box." Can you give me an example of a today technology set-top box that this will work in, and then tell me on figure 1...

Utley: We just happen to know there's development activities going on in a number of different of companies, and they're heading in this direction.

Boehm: Yeah, but your claims have to be buildable by somebody with ordinary skill in the art. Set-top box...

Bernstein: That's just a display system.

Utley: Web TV in an example of a set-top box.

Boehm: Oh, okay, that's right.

Utley: A set-top box that takes streaming information and then presents it on a TV screen.

Boehm: So what's the cable box sitting on my mom's TV? It's just a cable box that goes to the VCR on your TV. That's not a set-top box?

Utley: That is a set-top box. A very simple one.

Boehm: Yeah, it doesn't have a display on it. It uses your TV.

Utley: It uses your TV, but the newer ones all have computers in them and memory and can convert different formats.

Boehm: Right, but the set-top box itself doesn't have a video display.

Utley: No, it uses the TV as the video.

Boehm: Yeah, which is Web TV.

Bernstein: So to put in a TV claim.

Boehm: I don't have time to go look at claims right now. We're going to be crunched to get this on file tonight.

Bernstein: Okay.

Boehm: Okay. So my question, again, can you give me an example...you did, Web TV. It's a set manufactured by who? Or is it in there already.

Utley: Microsoft has a Web TV. And Dell had a Web TV; they just pulled it off the market. But Web TV is a primitive form of what's coming.

Boehm: I know, but you can't patent what's coming unless you can give an example of what you can build today,.

Utley: Web TV.

Boehm: Good. And I wanted to find out where that was in. Do you remember? I'll find it later.

Bernstein: Okay. Page 26, lines...

Utley: I'm not through with this one.

Bernstein: Okay.

Utley: Back to the mid area again. "The advantage of claim 1 is it applies to enhanced digital files which are not compressed." We have to make a provision as a dependent claim for transmitting over a network because the one that provides for transmitting over a network is tied to a compressed file.

Boehm: True, but what Steve is doing here in claim 8, there's the compression hanging on claim 1. Now if you do a compression, you can throw claim 8 and claim 1

and them. And if you upload it to a network server, now you can throw claim 9 and 8...

Utley: As long as you don't...

Boehm: if it's on a network server, but it would have to be compressed then. Oh, this is the one you talked about before.

Utley: Right.

Boehm: I'm sorry. So you need number 9 dependent on 1.

Utley: Right.

Boehm: Thank you. That's what we talked about yesterday.

Bernstein: That was it? <to Utley> Okay. 26, line 6,

Boehm: Of what claim?

Bernstein: 13.

Boehm: Line 6 of claim 13...oh, the "...least twice...

Bernstein: ...greater than."

Boehm: Okay. I don't remember...do we have a picture claim, meaning an independent claim that's fairly narrow that reads on your preferred embodiment in your product? We should because that's maybe what we have to go with because now that we've...here's my thinking...and this, Steve and I discussed this ad nauseam here. We're going to go with claim 1 in the EPO. The reason is we're filing a PCT application now and a U.S. Claims are cheap and free—not free, but they're cheap—and they take multiple claims in the PCT and in the U.S. But when we split to Europe, they don't like multiple claims. They will give you one apparatus and one method only if they are related. So we basically pick our best independent claim, but not all the time your broadest, believe it or not because they may find something that is...since you can't...how do I explain this? If you have your best claim...our claim 1 now is kind of reaching over our product that we really know we can...that we're comfortable with what we can get, and your product with what you can get right now is too narrow because somebody can modify it. What I usually do in Europe is go somewhere in the middle to get something that's broad enough to cover your product but still in a real-world application and not trying to claim the world because you don't get that much leeway to amend in Europe.

Bernstein: Is this to the "...least twice versus greater than one"?

Boehm: If there's little or no chance that an infringer is not going to do at least two, that will buy you...

Bernstein: There are chances that it might be.

Boehm: But what's the chance that Prior Art is going to come out of the woodwork...

Bernstein: None because...

Boehm: No, there's very good chance that Prior Art's going to come out of the woodwork and blow all of it...

Bernstein: Between 1 and 2?

Boehm: It's possible.

Bernstein: Well, that's what I'm saying, if that's the case and somebody else beat us to the punch, we should have a claim that takes us all the way from "greater than one." You don't want to box me into that statement; just make it as a claim.

Boehm: Okay, so you're saying that we would file the broadest idea in Europe? Well, we'll discuss that later when Europe rolls around.

Bernstein: Okay.

Boehm: That was why I did...the practice is to do different claims of varying scope and different formats.

Bernstein: Okay, on 15-claim 15-"moving"...is that panning?

Boehm: Yes.

Bernstein: Okay. [Plurality] Jim didn't like that because it means at least two.

Boehm: Jim didn't like it?

Bernstein: Yeah, that's his note. Yeah, absolutely, and that's what it means. That's the whole point of claim 16, which is dependent on 14, which is dependent on 13. Are you with me?

Bernstein: Yes.

Boehm: You're down in the mud now, and plurality may be thing that saves your butt.

Bernstein: Okay.

Boehm: Because your product does these, right?

Utley: Yes.

Boehm: Your preferred embodiment product does these.

Bernstein: Okay. Then my only last question was, can you throw something in to cover the game world? That specifically relates to gaming and flight simulation?

Boehm: How would we do this? In figure 1.

Bernstein: You'd be able to now use games differently, and you differently can use flight simulators differently.

Boehm: Okay, look at figure 1, Eliot.

Bernstein: Yep.

Boehm: What changes? Just the definition of what 28 is, right?

Bernstein: Figure 21, the display monitor, the display system is what you're saying?

Boehm: No, no, no. Figure 1. What changes when you go to games and flight simulators?

Bernstein: Because in those, the displays become now dependent of parameters of the game or the flight simulator that drive the display window.

Boehm: That's fine, but there's nothing structurally here that changes other than the user computer. It has now the flight program or the game program on it, right?

Utley: What happens is the user interface actually becomes an application-driven interface.

Bernstein: Right.

Utley: That's probably the key difference. And the question was, can we convert that user-driven interface to an application-driven interface?

Boehm: Meaning like a flight simulator program?

Bernstein: Absolutely.

Utley: So that what is displayed is under control of the program and not under control of the user.

Bernstein: Right. Because, you see, you don't want the pilot maybe to be able to do a nosedive. You might want him to be flying along and have a program that says...shock him, make him dive...

Utley: Well, with all the graphics, that the program knows where he is, and therefore moves the display according to where he is and what he's doing.

Bernstein: Right.

Utley: So it's...

Boehm: But under the control of the computer application of its own as opposed to...

Utley: Right.

Boehm: I see. So basically, it's not a network anymore. It basically doesn't fall into figure 1.

Utley: Well, it...

Bernstein: Figure 1 better not tie me to a network.

Boehm: Figure 1 ties you to a network as your preferred embodiment. This'll be probably what's on your...

Utley: It doesn't matter whether it's on a network or not.

Bernstein: Okay, as long as that's true, that's fine.

Utley: What we want is to make sure that what we call the user interface in here can also be a computer-based application interface.

Boehm: Okay, in order to do that, we've got to stick a claim on it or we have to put support in the spec now to do that. So what would we do? All I see that we'd do is...

Bernstein: You could broaden user interface.

Boehm: Yeah, we'll broaden the definition of user interface in the claim.

Bernstein: And then I'd throw in a quick claim that says those two things as examples of it.

Boehm: Good idea.

Bernstein: And we'll let you get to re-writing.

Boehm: Hang on a second...don't go away. "...broaden the user interface to have a control of either the server competitor or the user computer." Right?

Utley: Right.

Utley: And when we do that, that really then lays right on top of that disclosure that I made that we had talked about because what one of the items that I wanted to accomplish was to be able to control the display from the computer itself, or from an application, rather than from the user. Remember that?

Boehm: Yeah, sure. And in this example, the flight simulator application program would control the zoom and pan of the display?

Bernstein: Yes.

Boehm: That means you still provided a digital...claim 1 would still say that somebody at sometime provided digital image files for viewing on a computer...

Utley: Yes, right.

Boehm: So claim 1 would catch that.

Utley: Claim 1, as long as the user interface can be expanded to include a...

Boehm: Either a downloaded applet.

Utley: A program interface.

Boehm: Any program.

Bernstein: Right.

Utley: Right. And we won't have to say where the program resides.

Boehm: Yeah.

Bernstein: Yeah, because definitely in this world, gaming wouldn't know where to put it because now multiple users can access one central game.

Boehm: Great thought, guys.

Armstrong: Always save some of it for your last-minute work.

Boehm: Yeah, yeah. Well, I've got an hour. That's all. Brian, let's talk about the definition of force target and all that other garbage because I got confused in there, Jim got confused. It's in the specs...Steve did that. Do you know what page it's on because it's all over my desk.

Utley: Yeah, it starts at...

Bernstein: Okay, Doug, I'm done, right?

Utley: Yep.

Bernstein: Can you send me a copy of that? When do you think you'll be sending out a final copy?

Boehm: What is your...it's going to take me hours now.

Bernstein: I know.

Boehm: Worse case, I would say I could send you a draft at 8:00...something like that.

Bernstein: Okay, perfect.

Boehm: Now, are you going to be there today? Mail it or what? I could email it to you if you want. That would be easiest.

Armstrong: Then we're going to need some prints, right? Some signed copies?

Boehm: No, all you have to do...

Bernstein: Is verbally.

Boehm: All you have to do is [] that this is your invention; and when you go to read it the second time and sign the declaration, that you won't make any changes to the spec, and that was your invention the date that we filed it.

Utley: You can send one to me at my home.

Bernstein: And send one to Jim.

Boehm: But do you guys want another pass tonight.

Bernstein: Another what?

Boehm: Another pass at it. Do you want to re-read it?

Bernstein: I do. I absolutely will re-read the changes. I'll have Jim re-read them, and by 9:30 hopefully we'll be done reading it and be done.

Boehm: Okay, I'll see what I can do to push this through then.

Bernstein: Cool. Hopefully it'll just be a re-read and we'll say it's right.

Boehm: Yeah.

Bernstein: Because if something jumps at us...

Boehm: How do I get it to you? Do you want me to fax it? I want to email it. That's quicker for me.

Bernstein: Great, email it.

Boehm: To whom? Where? When?

Bernstein: Eliot@iviewit.com, brian@iviewit.com, and jim@iviewit.com.

Utley: No, send it to me at...<end of tape>

Transcription of Patent Meeting
Conducted August 4, 2000
Participants:
Eliot Bernstein, Jim Armstrong,
Brian Utley, Steven Becker, Simon Bernstein
Docket 57103-120

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified.

Armstrong: Are we aware of all the important dates I know you probably are, but are we +
+Brian made aware of all of our deadlines and contingencies relative to
those deadlines +~~that~~ that we that we're not left with...I was a little
surprised that a final pack that's been in the works for a year, and I
know you weren't involved for a year, but in the works for a year required
that Eliot and I spent the entire night and morning reviewing it in order
to get it done.

Bernstein: What bothered me about that as well is that we'd go through the math, and then
suddenly you have a document Brian sent you several days earlier regarding
the math that has a bunch of changes in it, and none of that's in there. I
mean, I don't understand that.

~~Becker~~Armstrong: ...was changed from that document anyway.

Boehm: Yeah, it was changed from that document anyway. I was working with Brian, who I
thought was the master of that math, but...

Bernstein: But he had sent you an updated ~~map~~ math three days earlier that didn't appear in
the final document that we were trying to...

Boehm: Okay, I don't know. Steve was handling that. I don't know whether...you know,
Steve says he did put it in there, but then I don't...

Bernstein: But then we go through the document that we're filing, and it's not there.

Boehm: Okay, but we were on the third draft when I took it over. You guys had
opportunities like crazy to...

Bernstein: But that's the thing. Brian had sent it to you earlier, and it still wasn't
appearing in final drafts.

Boehm: If that's true, then something crossed in the email because Steve said he put it
in there, and maybe there's a piece of the math missing between the
crossing the emails. You're right in terms of...

Bernstein: Is Steve there?

Boehm: I don't know. He probably is.

Bernstein: And then my other question is quite a simple question my dad asked about
electrical engineers being mathematicians and said, "Didn't they sit and
pencil out the math of all this themselves?"

Boehm: Uh, huh. Here's what happened on that. Steve was filling the application. We
worked with Brian and you, Eliot, on the application. In some of the
letters and emails he said that he doesn't understand the math.

Bernstein: I'm not getting any of those.

Boehm: Huh?

Bernstein: I'm not getting any of those emails.

Boehm: Well, then, talk to Brian because we were corresponding with Brian on that, and I don't know why you weren't getting it if that was the case, and I don't know which letter went to who, blah, blah, blah, but I do know that we mentioned that we didn't understand the math, and we were up to the third draft, if I recall; and you're right, Jim, that it shouldn't have taken...it shouldn't have been last minute and you should have had time to do it. I totally agree, but I can't take total blame for that...

Bernstein: But wait a minute. Steve has fundamental errors on understanding the math, and yet we're going to file it with him having math problems?

Boehm: It's your duty to either help us to understand...

Bernstein: But then I've got a point. We did help you. We sat on the phone for an entire day, walked through this...

Boehm: The day of the filing you mean?

Bernstein: And if this math is still wrong, I mean, there's something really fundamentally wrong here.

Armstrong: Let me check it again.

Bernstein: Yeah, let us call you back in a while. Is Steve in today, too?

Armstrong: I didn't get involved until Wednesday.

Boehm: Right.

Armstrong: I'll tell you one thing, Doug, that you should do as just a matter of course going forward. Eliot being the owner of the company and the person that Brian reports to is any future email correspondence should always be copied to him. That's kind of just a standard practice we all do in the company.

Boehm: To copy?

Armstrong: Yeah.

Boehm: Okay. I didn't know that.

Bernstein: You ask me to review and sign these patents, and you're not sending me information. What do you mean.

Armstrong: I think had we known that there was a question of validating Brian's math, Eliot would have brought me in a lot earlier.

Bernstein: I would have brought a mathematician in. I mean, this is ridiculous.

Armstrong: Yeah, I'm just a friend that's good at math, not a mathematician.

Boehm: Right, well.

Armstrong: Go to your meeting. We're going to check this patent ~~stats~~-out, and we'll talk to you letter.

Boehm: Well, you've got to talk to Brian, too.

Armstrong: Yeah.

Bernstein: I think because I now seriously have to report a lot of things to a board of people that we're going to have to have a meeting at some point either today or Monday with a few of the key people in the company who are investors, etc., so that they understand what they are investing or not investing in.

~~Becker~~Armstrong: Don't jump to conclusions.

Bernstein: No, I'm not, but if this is correct, we've got some fundamental things that need to be discussed.

Boehm: If what's correct?

Armstrong: If he's correct about the math being wrong, but let's check it...

Boehm: No, I'll bet we could get a good patent if the math is totally wrong. I think we're barking up a tree here that's not a big wall.

Bernstein: But wait a minute. The question is if it still remains wrong and we gave you the right changes, it should have been filed right. All the sudden I'm left with a patent that...

Boehm: Okay, talk to Brian.

Bernstein: I will.

Boehm: Brian gave me the right changes. I filed what Brian gave me.

Bernstein: Okay.

Armstrong: Okay.

Boehm: And I don't mean to...you know...yell out of that, but that's what happened.

Bernstein: That's no problem. I totally hear that.

Armstrong: Thanks, Doug.

Boehm: Okay. Talk to you Monday.

<Hang up phones.>

Bernstein: 8/4/2000. 8:30 Doug Boehm conference call. Jim Armstrong, Eliot Bernstein. Steve, Jim, everybody, I'm taping the conversation, 8/4/ patent discussion regarding Docket 57103-120 with Brian Utley, Steve Becker, Jim Armstrong, Si Bernstein, and Eliot. Okay, guys.

Becker: [], too, if that's all right with everybody.

Bernstein: Yeah, did you get the fax from Jim?

Becker: I haven't received it yet.

Armstrong: It was sent actually to Doug on the "cc" line, but to a machine at 297-4900.

Becker: That's right. It'll go to our central fax department, and I just phoned up there and asked them to deliver that to me when it comes in.

Bernstein: Okay, but you've got the patent in front of you?

Becker: I don't. I don't, but I can get it.

Bernstein: Okay, well, let's do that.

Becker: Okay. I'll need a minute. I've got to go over the Doug's office.

Bernstein: Okay.

Armstrong: The fax is on its way to you now.

~~Becker~~Simon: It's on the way to me? |

Armstrong: Yeah.

~~Becker~~Simon: Okay, then I'm going to put you guys on hold... |

Armstrong: It's not done yet.

Becker: Well, I've got to go upstairs and get it, so hold on.

Armstrong: Never a dull moment.

UtleyBernstein:----- They didn't put...they didn't put in what we corrected them on... |

Bernstein:-----~~Inaudible comment.~~ |

Utley: And I did it again on Wednesday night.

Bernstein: And he said to me all these changes were in when I went through them at 11:15 at night with them. That all the math has been changed. I was looking at him and said these haven't been changed. He said, "No, I'm working on a copy that's been changed. I'm going to send it to Brian, and sign off..." So, well, now, again, we're back at this same thing. How do we change things? What effects does it have on us?

Utley: This has no effect. Mathematically, that's...

S. Bernstein: Were those faxed?

Bernstein: YeahYes. |

~~S. Bernstein~~Armstrong: Okay. Nine pages. |

Utley: But obviously this has an effect.

Bernstein: A huge effect because you have completely altered numbers.

Utley: Well, you could explain it; but the only way you could derive this is by having that be the square root.

Bernstein: But this is wrong that he missed this, and isn't that on your current math? Do you have your sheet that you did...current math...that he said he didn't have, had, whatever? Brian, do you have the patent book?

Utley: Yes.

Bernstein: Okay. I need to borrow that.

Armstrong: I would think that in a patent document being as important to us as it is, there's not an acceptable level of error. It's either got to be all right, or it's not acceptable.

Bernstein: Oh, and that's what we heard from Doug this morning. So, I mean it's hard to fathom this.

S. Bernstein: You know what guys? I don't understand. Why doesn't somebody... take five minutes, and tell me what...because I sat~~u~~ it in a meeting with all the lawyers, and... |

Bernstein: Here, Dad, let me give you an example. Is 2,560,000 times .8 the same as 2,560,000 times 1.25? Yes or no?

S. Bernstein: I doubt it!

Bernstein: Okay, well, that's the fuckin issue. That's how far off these are. |

S. Bernstein: Okay.

Becker: This is Steve. I'm back, and I can't seem to find that file. Doug is out today. You guys may know. So, I don't know how much help I'm going to be.

Bernstein: Okay, well, do you have the fax? Hey, ~~DP~~Man, you've got the file right there. Just email it to him. |

Becker: Here it is. I've got the fax now.

Bernstein: ~~Okay~~Steve, Doug also mentioned that you had emailed some correspondence to us that you didn't think the math was right earlier? I have no records of any of that. |

Becker: No, what I did was I faxed the draft over on Monday night, which incorporated some additional disclosure that Brian had sent. Basically, it was examples. It had the equations set out for both print film and digital examples, and then he had three examples for print film and one example for digital, and I essentially...I exactly basically cut and pasted that into the application.

Bernstein: Well, the application we got from Doug didn't have any of that. cut and paste because what it had was the old stuff and Brian referred to having sent this to you several days earlier and yet it wasn't in there.

MISSING SECTION GO BACK

Becker: I don't really know because at that point Doug was down there with you guys, and I presumed you were reviewing it on like Tuesday and Wednesday. And the Doug said he would take care of just...because we figured there would just be some minor changes after we'd incorporate all of that.

Bernstein: Well, it wasn't incorporated, so there were huge changes.

Becker: Oh.

Bernstein: And it would have been filed completely wrong had it not been for Jim Armstrong reviewing it. Everybody would have nodded off on this and accepted wrong, completely wrong, filings.

Becker: Maybe he should be part of this conversation.

Bernstein: He's on this conversation.

Becker: Oh, good. Hi, Brian.

Utley: Hi, Steve.

Bernstein: Brian's here and Jim Armstrong's here.

Becker: Okay. Well, the only link we're missing here is Doug because Doug took the last few steps of incorporating comments and actually filing the application on Wednesday.

Bernstein: Hey, ~~EB~~...~~EB~~-man, forward him a copy of the final draft, would you?

Armstrong: And that, Steve, I think the most important question to have answered is what are our rights and obligations and opportunities relative to correcting this without any ill effects to us?

Becker: Yeah. There's plenty of opportunity essentially. We can file...if there are substantial errors in the application as it was filed, we can simply file a new application as soon as we get those fixed either on Monday or Tuesday or what have you. The goal of filing on Wednesday was to maintain priority back to the provisional application, which was filed a year ago.

Bernstein: So, did we lose that if they're wrong?

Becker: No, because we can only claim priority back to the extent that the subject matter was originally disclosed in the provisional filing of August 2nd of last year, and none of these equations were filed back then.

Bernstein: But the original process was.

Becker: Right. And the original process is the [] preserved in the application. We're just talking about the details of the math examples that are in here. So we haven't lost anything.

Bernstein: Will we lose claiming back to the priority of the original provisional? So we did lose something, or am I incorrect in what I'm hearing.

Becker: Yeah, No, we didn't lose...the original provisional can only provide priority for what was originally disclosed, and the math was not originally disclosed, right?

Bernstein: Well, no, but the math is a subject of the invention, not vice-versa.

Becker: The reason I'm putting the math in there is essentially to provide concrete examples...

Bernstein: Of the invention.

Becker: Right.

Bernstein: But the invention was in there as of the priority date, and we had already talked with Chris Wheeler and everything regarding this. Were you on that conversation?

Becker: I don't remember.

Bernstein: Well, Brian, you were on that conversation. It's the conversation where we were going back to try to get the soonest date on the filing and correcting the provisional to encompass all of these things.

Utley: Well, you can't correct the provisional, but you can...what it does is it claims back for everything that references back to the original, but then incorporates all the new elements to bring it into...to make it into more of a complete statement.

Bernstein: I'm not sure I understand this. It was my understanding that we were going back to Ray [Joao's] patent and fixing it by inserting what we have here. When I talked to Doug, that was what he was under the impression we were going to do, and now that's all changed as of today.

Becker: You really can't fix a provisional application.

Bernstein: Not the provisional-the ~~regular~~-Ray Joao filing of August whatever-whatever day it was.

Utley: No, in March. March 24th.

Becker: Oh, okay. Yeah.

Bernstein: And that way, if that patent gets approved with all this in it, that's what we were doing, and we wanted that one to be approved first correctly because it obviously expedites our life by a long way.

Becker: This is the PCT application file of March 23rd. Is that what we're talking about?

Utley: Yeah, but the way that I recall the conversation, the spec cannot be changed...

Becker: Right.

Utley: ...but the claims can be.

Becker: Right, and they can be changed as long as they're supported by teachings that are in that specification.

Utley: Right.

Becker: Which is why you really...

Bernstein: And the specification can't change?

Becker: Right.

Bernstein: Why?

Becker: Because it would be kind of like...

Bernstein: I thought that was based on new matter.

Becker: That's exactly why it can't be changed.

Bernstein: So it can be changed if it's still the same matter?

Becker: The claims can be amended as long as they are still fully supported by the matter that's in the specification that's originally filed. Now, if you want to change your claims and they're not supported by the specification as originally filed, then you have to file a whole new application adding new matter to your specification that will support those claims.

Armstrong: Does the fact that a direct interpretation of what in general amounts to typos and oversights, but a direct interpretation of that affect our ability to change that supporting matter of that matter? Because if we directly interpret the math in the certain circumstances here, it will bring you to a wrong conclusion if it's a direct interpretation without having to reverse ~~such an error but~~ engineer what was meant to occur.

Becker: Well, I see. Then we need to get the math right, but it doesn't affect our priority. Only by a few days essentially.

Bernstein: Well, do we lose the ability to claim priority to what we were trying to claim here...

Becker: No.

Bernstein: ...by that date? So you can go back in and change the matter of this?

Becker: You don't go back and change the matter, you just file a new application which claims priority back to a prior application only for the subject matter that was...

Bernstein: But we missed that application.

Becker: No, we've got it in the form of this continuation, or this PCT, that we filed claiming priority back to that patent application. So we've preserved that chain of priority.

Armstrong: Are you then completely confident that errors that we need to correct right now then are not going to hurt us in any way, shape, or form as being able to claim as part of our invention all of the correct things that we want in there?

S. Bernstein: That's what I heard at that meeting, that we could go back and re-do that at a later date without having any implication.

Bernstein: As long as it wasn't new subject matter.

S. Bernstein: Exactly right. These are just corrections to the...

Bernstein: They're corrections, they're math, whatever.

S. Bernstein: Okay, but we're not saying this is a new way to get to that.

Bernstein: No.

S. Bernstein: Okay, that's what I heard. That's the notes I took. Eliot, you should have that on the tape recorder so that we know that.

Armstrong: Well, we do, and that would also support, I think, another issue, which is that we now have to go through the refiling of something else which was originally corrected several days ago and was somehow ignored so that this whole refiling shouldn't even cost us anything.

Bernstein: Well, and beyond that, Doug <sic>, what I'd like to really get down to is a letter from you, in writing, explaining all of my, you know, both from the Ray [Joa] patent forward, and I think you need to talk to Doug about it, of what our potential pitfalls are here with these filing errors, what our potential pitfalls are, what it caused to happen with that priority, priority equals, and if there's any harm to us. Because we keep just slipping back by these things. This should have been right. I mean, we have well documented, and Brian's well documented, that these changes were sent, and now we've missed a priority claim to that by not being able to go back and change our last filing. I need to know the liability here.

Becker: You know, I was not there on Wednesday night. Brian talked to Doug on this and then made final changes, and then...

Utley: Yeah, Doug sent me a next-to-last copy, which I went through and there were a number of errors—I have my notes on each one of those at home—and then I reviewed each one of those with Doug, agreed on what they were, and then Doug was going to send me the last copy, which apparently he didn't because I never received it. At that point in time, it was, I guess, about 11:30 or 11:45 our time.

Bernstein: And these were also discussed in great length with him for a whole day on the phone.

S. Bernstein: Yes, well, how about in the...

Bernstein: No, no, Dad, this is separate. But at great length this was discussed, every one of these changes.

Becker: The changes you sent me here, is this Brian's handwriting?

Utley: No, some of it isn't. Isn't correct.

Bernstein: Well, let's go through it because I'd like to...

Armstrong: Yeah, let's go through it.

Becker: I don't know if that's going to help that much because it's a question of what actually was filed and whether it incorporated the changes that Brian asked for the last minute.

Bernstein: It didn't.

Armstrong: We know that. This is what was filed.

Becker: Brian, didn't you just say that Doug didn't send you the final draft of what was filed?

Bernstein: He did it the next day.

Becker: Oh, he did the next day?

~~Armstrong~~Bernstein: Yeah, Jim, can you forward that to Steve real quick?

Armstrong: What?

Bernstein: Email it to him...the final draft?

Armstrong: Yeah.

Becker: Well, I'm not going to question...

Bernstein: Okay, but we need to go through and get the changes acknowledged, accepted, have you put it into the next whatever you're going to do to solve this, with a letter explaining what we've lost here.

Becker: All right.

Bernstein: Okay. Any liability, potential liability where we're exposed to from this.

Becker: Oh, I wouldn't worry about it. You guys are making a mountain...

Bernstein: Well, you know, I gotta tell you, I worry a lot about it from what Doug told us. So, you know what I mean? You tell me not to worry, but then you tell me it's very important that we're accurate in this filing; and then we're very inaccurate in the filing, and then we're not supposed to worry. I'll feel much better not worrying with a letter from you explaining why I shouldn't worry.

Armstrong: Steve, what's at your email?

Becker: Sbecker@foleylaw.com.

Armstrong: Sbecker?

Becker: Yeah, "S" as in Steven, "becker."

Armstrong: Got it.

Bernstein: Okay. Let's just go through this with you, Steve, so we can get the next step done.

Becker: All right.

Bernstein: Which is correcting the issues. Are you with us on page 13?

Becker: Right.

Bernstein: Okay. Jim?

Armstrong: On page 13, line 19, the expression of VWH should follow the way we express it in our definitions, which is VIH. Even though the two are equal, let's just follow the way that we have it expressed in our definitions on page 12.

Becker: Oh, I see. Okay.

Armstrong: Then on line 23, each of those expressions is not congruent with the way we've defined them. Despite the fact that we arrive at the same results, it doesn't apply the formula in exactly the same way. So for a reader, it ought to be the same. So for line 23, it should be the "square root of 2,560,000 times 1.25."

Becker: All right.

Armstrong: Okay. Not "2560 divided by .8."

Becker: Okay.

Armstrong: On line 24, it ought to be "1789 divided by 1.25."

Becker: I see. Okay.

Armstrong: Then on line 25, it ought to be "1441 divided by 4." Again, the results are the same; the expressions are not.

Utley: Now, on that last one, Jim, it's correct. |

Armstrong: It's what?

Utley: The scan density is 1789 divided by 5.

Armstrong: Okay, hold on. Scan density is defined by us as being...where the heck is it...oh, it's right up above..."target image height..." right up above on line 7..."minimum scan density is target image height," which in this case we just defined to be 1431...

Utley: Where are you reading from?

Armstrong: Line 7 of the same page. Line 7, page 13. So target image height is 1431 divided by the source image height, which is 4, so it should be 1431 divided by 4.

Utley: Well, the...yeah I guess that that equation, "MSD equals TIH/SIH," did not come from my documentation. |

~~Becker~~Armstrong: Hold on, let me look at this documentation. I've got it right here, |
too.

Bernstein: Well, Steve, you have copies of this, too, that were sent to you...

Becker: Right.

Bernstein: ...of what Brian's looking at, several days ago. So how isn't this stuff flowing forward into the patents, especially when we pointed it out two times before filing? I mean, I'm just dumbfounded at this.

Utley: There was a change, Steve, which you were not involved...

Becker: The proper equations, ~~that I~~ wasn't there the last night when the last changes were put in, so I can't really speak to it.

Bernstein: No, but he sent you his changes several days ago.

Utley: Steve, there was a change that we decided on uh on uh Wednesday afternoon, which was to reflect aspect ratio as width divided by height, which uh I uh made, and that was created by the desire to reflect aspect ratio the way that displays are uh uh expressed as opposed to the way photographic images are expressed. Photographic images are expressed the opposite way, and that's the way the documentation uh uh had been originally prepared. But it was thought that it was uh perhaps more consistent with current technology to express it the way that displays are expressed. So I went through and changed...

Becker: You mean from that change in ~~invention? convention?~~ convention?

Utley: Yes. So that caused the equations to be reconstructed to reflect the uh uh inverse of what was there before because the affect ratio now is inverted.

Becker: I see.

Utley: And what happened was Doug apparently did not pick up all of those changes, even though I went through them very methodically the last thing uh Wednesday night when he sent me ~~his~~ uh uh his uh almost-final draft.

Becker: I see.

Utley: Uh And uh, Jim, just for your uh edification, that also affected the MSD shifting from a height to a width orientation. The number is the same, but it changed it from a height to a width.

Armstrong: So what's the correct formula for MSD?

Utley: It's TIW/SIW.

Armstrong: Okay.

Bernstein: So, you made this change with Doug, and it's still wrong in the patent?

Utley: Right

S. Bernstein: I'm a little concerned about the proficiency of the legal aspect of this. We sat there for hours, and then Brian stayed late into the night with this guy, and then he comes back and we don't file it right anyway? It seems like there's something wrong here. I mean, ...

Bernstein: I mean this is, yeah...

S. Bernstein: I mean, I'm just budding in because I have little or no knowledge as to what the numbers mean, I'm just listening to a conversation in which I'm hearing is that after four or five hours in a room locked together with lawyers and everybody else, we reach an agreement that those changes will be made. Now, my understanding is Brian stayed and made those changes, and then the lawyer didn't file the changes? What's the sense of that?

Bernstein: These are good points. Let's move forward, Jim.

S. Bernstein: These are points that have to go back to stockholders with money invested.

Bernstein: That's why I've asked Steve to send us a letter of what's happening, what our exposure is, by Monday or Tuesday, explaining how this didn't occur, get in, and what we're going to do to resolve it, and what that resolve initiates in the chain of events.

S. Bernstein: Well, the other side of it is this. If after all of this precaution has been taken—and Brian, you can correct me if you think different—but after all of this precaution has been taken, it appears that the fallacy of worrying about it ever gets accomplished. Brian stays, everybody works on it, it's still filed wrong. Now what if Jim Armstrong hadn't caught it. Brian was on a plane today...

Bernstein: Then none of Brian's changes even sent several days ago even would have even been in there. Math would have been wrong, equations would have been wrong, verbiage would have been wrong.

S. Bernstein: Am I right, Brian, in having this concern?

Utley: Uh Well, yeah, obviously it's uh clearly uh uh a major concern because there's nothing more disciplined than the uh uh mathematical expressions.

S. Bernstein: And you're comfortable that what you did, even if some of them were wrong, that we could have later corrected...

Bernstein: No, Dad, we sat here with Brian and Jim and Doug, and we went through it, and we all agreed it was right, and those changes do not appear.

Utley: No, we...uh uh

S. Bernstein: That makes me very nervous. Well, it makes me nervous to the extent that are all of the other patents done right?

Bernstein: Well, that's what I'm...I'm going to start having somebody review all of this. I mean, obviously there's...it opens up a whole can of worms.

S. Bernstein: Well, the other thing that I heard was—and not negatively or anything else—but I heard that perhaps Ray [Joac] did this work and he was either concerned about it being a bit sloppy, blah, blah, blah, blah. What is the excuse for this law firm?

Bernstein: Well, let them write us what's happened here. I mean, I definitely need to see on paper, Steve, some kind of report on this. That it describes what occurred, why it's not reflected in the patent filings, and what our exposures are, and that'll tell us what we're dealing with in firm, etc., liabilities. I mean, we don't know that.

Armstrong: We should continue to look at the changes so that he's copy that reflects everything.

S. Bernstein: Well, even if there is no liability, what I'm still concerned about, even if it can be corrected, it's the exact same position—Brian, am I right?—that we found ourselves in with the last lawyer who did it. Okay, thank God we can make changes, but that isn't the answer. Why not just get it right, get it filed...

Bernstein: No, don't just say thank God we can make changes, Dad, because all of that brings additional liability to you. You miss dates, you miss claiming, you miss this and that—words that are very tricky and confusing, and only these guys can understand. So that's why I need it to be put in writing so I can have it analyzed...

S. Bernstein: Absolutely, I want it definitely, because I need to take it...you know, I need to have board member approval...

Bernstein: Oh, I think our board is going to be disastrous with this stuff about several things when we take this to them. And we need to know from the Ray [Joac] level to the Foley-[Lardner] level, how this is going to be cleared up and what the problems were that occurred.

S. Bernstein: Okay, let's get that part in process; and it's unfortunate that Doug's not here because maybe it's something he could explain.

Bernstein: No, I talked to him this morning; and as a matter of fact, he said Steve had the math from Brian days before and by the time he got it, he thought it was all input correctly, and that was his excuse.

S. Bernstein: Well, what was he doing here with Brian?

Bernstein: Well, then we spent a whole day with him correcting it all so that it was right; and then by filing time, none of it was right. So, let's go forward. Let's just stay on track. We'll deal with all of these issues on Monday.

Utley: Uh I just say one thing. Uh Fortunately, uh I don't know The most important part of the math is all of the definitions. The examples are examples; but the most important part of the math is the are the definitions.

~~S. Becker~~Bernstein: Okay, are those right?

Armstrong: No. Well, there's one that's not ~~, we just found out which is []~~. Line 7 of page 13...

Bernstein: Is wrong.

Armstrong: Is wrong. It should read...

Bernstein: ..."[] equals TIW/SIW."

Utley: They are mathematically uh uh equal. Both will give the same results. So It's a uh consistency question as opposed to an accuracy question.

S. Bernstein: And for a reader, it would probably be easier to be consistent.

Utley: Absolutely.

S. Bernstein: That's what we want. As long as we're spending all of this money and everybody's devoting their time to it, we want it to right-as right as you can possibly get it at any rate.

Bernstein: Okay, Dad, let's move forward.

Armstrong: That changes one thing on line 25. The expression on line 25 is now correct as it was typed, so scratch out my handwriting. Okay? All the other corrections stand as I explained them earlier. Now, on the last line of this page, that should read: "480 X 320."

Utley: That's correct.

Armstrong: Okay. Then on line 6 of page 14, I think we should consistently state which is width and which number is height because it's such an important distinction in the calculations. We did it on the previous example, but not on this one.

~~Bernstein:~~ This then is width height

~~Armstrong:~~ Width is [] height is 4

Utley: And that is what we had agreed upon on Wednesday afternoon.

~~Bernstein:~~ Right. That changes again in a minute

Armstrong: Okay. Line 17, again we're just missing that square root symbol in order to make that equation work. Without the square root, it's millions instead of thousands. Now, in line 19, I had originally indicated this was correct; it's now incorrect because of our change in the formula for the density for the maximum scan density.

Bernstein: Steve, are you getting all of these?

Becker: Yep.

Armstrong: This should now read in line 19: "1789 divided by 5 equals 358."

Becker: "1789 divided by 5 equals 358?"

Armstrong: Yes.

Becker: All right.

S. Bernstein: Steve, I have a question to ask you.

Becker: Yes.

S. Bernstein: When Jim or Brian or anybody gives you these numbers, are they checked out by anybody, or do you just copy what we say and that's it?

Bernstein: No, they definitely don't copy what we say. That's an initial problem here, Dad.

S. Bernstein: Okay, I don't mean to be sarcastic.

Bernstein: No, but they would normally as mathematical people add up the equations.

S. Bernstein: Yeah, because your partner was telling me that most patent lawyers are engineers, which would lead me to believe that somebody would say, "well, I better check the math to make sure that guys who are not engineers know what the hell they're talking about." Is that done by your firm, or is it just accepted as gospel what we give you?

Becker: We don't have engineers or technical people check the math that you provide us.

S. Bernstein: Okay, so what we provide you, then, we live and die by?

Becker: Okay. Your job is to get that right.

Bernstein: Right, but what we did give you, you didn't provide in the patent.

S. Bernstein: Okay, we're trying to say the same thing.

Bernstein: Okay.

Armstrong: Let's just get it right.

S. Bernstein: At this point we're only interested in getting it right.

Armstrong: Line 27, that should be "36@H" for the height.

Bernstein: Which page?

Armstrong: Line 14, third-to-last line of the page.

Bernstein: Okay.

Armstrong: Now we're onto page 15. Again, we just need that square root symbol as indicated there.

Becker: Okay.

Armstrong: Then there is nothing on the next few pages until we get to page 18, this is an important omission for our calculation standpoint, but we need that square root symbol.

Becker: Okay.

Armstrong: Then I'm going to skip for a second this discussion on minimum scan density here because I want to talk to...go with Brian's comments, too, but on line 10, the correct figure is "1.33 equals 1.33."

Becker: Okay.

Utley: Yeah, that wasn't picked up from the other...from above, the aspect ratio.

Armstrong: Line 15, the square root symbol again is missing from that same equation. And then finally, I don't see why, in this example, or any digital example where we have no scanning to do, why we should even include any reference to minimum scan density because the only application of scanning in a digital world is if we were to print a digital photograph and later scan it, in which case we'd follow the print formulas, not the digital formulas. So, my suggestion here is that we change the sentence, beginning on line one, to end after the word "dimensions"...actually, strike the words "and minimum scan density" and also to eliminate line 23. Do you agree, Brian, that there's no reason to have that there?

Utley: It certainly doesn't add anything. Uh It doesn't uh uh subtract anything.

Armstrong: It just added confusion to me as a reader when I thought, "How do I calculate that?" and then realized it's not...we're not scanning anyway. Why ask someone to determine something that is not included as a step of the process? So I think if everyone agrees, we should strike the words "...and minimum scan density" in line 1 and 2...

Utley: No, what I would do, I wouldn't do that. What I would do is simply say, "...image size and dimensions" and then add a new sentence which says, "Minimum scan density is not required since we are dealing with a digital image."

Armstrong: That's fine, too. Then let's strike line 23.

Utley: No, I'd leave that in.

Armstrong: It's redundant, but that's okay. Do you see any other problems with the formulas? Did you review all of this again today, Brian?

Utley: Uh I've just uh uh I have not reviewed anything today. I wasn't aware of the problems until about three minutes ago.

Armstrong: Okay. So that covers my comments on that.

Bernstein: And, Steve, do me a favor. When you guys draft this letter, draft it to Si and Brian. Okay? I'd like to be cc'd on...and by the way, I'd like to be cc'd on any correspondence of anybody to do with the patents.

Becker: Okay.

Bernstein: One last thing. Doug mentioned that you had a file from Brian, a spreadsheet that part of the spreadsheet matter is not incorporated in here. He didn't know why...he couldn't explain why. I was wondering what that matter is, and where is it? Are you aware of that? Because he referred to you.

Becker: Did heTo me?

Bernstein: Yes.

Utley: Uh uh That's probably the image sizing spreadsheet.

Becker: Image sizing?

Utley: Yeah, I sent you two files on Monday.

Becker: Okay. Actually, you sent three all together. Oh, you sent three emails, and then the last one had two of them.

Utley: Right, the last one had two files: both the image sizing and the process.

Becker: Oh, you've got the macro, and then you've also got the description of the math. Now, what did you want included that wasn't?

Bernstein: Well, Doug said it should have been included, but it wasn't...the rest of that sheet.

Becker: What?

Bernstein: I don't know. Whichever half's missing.

Armstrong: Hold on one second...I don't want to confuse Steve. We do not want you to cut and paste out of those documents into these patent filing. Those documents do not reflect the way we want to express the math.

Bernstein: Right, but we might want them in there, B, correctly.

Armstrong: What?

Bernstein: We might want them in their correctly...

Armstrong: ~~They're not in there correctly.~~ We just went through it. It's now correct. If he employs all of the changes we just all agreed to...

Bernstein: No, but there's another sheet that's not reflected here.

Armstrong: Well, yes, I do want to talk about that. The macro, right?

Bernstein: Right. Can you forward that file to us--the Excel sheet--to Jim, me.

Armstrong: Just have Steve forwarded the whole email back to you.

Bernstein: Well, he doesn't have it in front of him, and Brian's got it right here.

Utley: No, I sent it to you. You were copied on it.

Bernstein: Okay. Let's just get the most up to date...any changes.

Becker: Yeah, Brian, remember, we made a decision not to file the claims directed to your macro--we made that decision last...a week before the...

Bernstein: Why?

Becker: Because it was going to involve some additional work, and we didn't have time at that point; and it was all new matter that wasn't going to claim priority to anything, so...

Bernstein: Well, what's new matter? If the math is part of describing the invention, then it's not new matter, according to what Doug's told me four times now.

Becker: Well, Eliot, as you recall, you always have to look at the claims of the application, and that defines the scope of your protection. The claims will also define...also have to be supported by the specifications. We were going to direct claims to the idea of using...of having a macro program, which is useful as a tool, to do these calculations in a rather simple process.

Bernstein: Okay, that's fine if you want to just claim a macro. That does it as a simplified process and add that as an additional patent for us, but the underlying math of it should all be applicable to the invention since it's just derived off the invention.

Becker: Yeah, math...

Bernstein: So it's not new matter, it's just an understanding of the matter. I mean, I swear we went through this four times the other day with that conclusion.

Becker: There are two files that Brian sent me. One of them was an Excel spreadsheet having six pages, and all of that material was included in the application in pretty much cut-and-paste format. His pages 2, 3, 4, and 6 were the examples, which I just cut and pasted as soon as I got them from Brian because they defined it all very particularly.

Bernstein: Okay, now you need to get back your record of that because 2, 3, 4, 5, and 6 that Brian is sitting here showing me, were never in these patents yesterday. So cutting and paste, you must have put them in the wrong document.

Utley: Those are the examples.

Bernstein: But those weren't...that's not what ended up in there.

Utley: They pulled these pictures out and put them as a uh uh uh figure sheet on the back, uh and then uh uh we ~~re-~~entered...

Bernstein: Wrong math.

Utley: ...the formulas in the body of the...

Armstrong: Hey, right. B, are those images...are you looking at the figures? Are all of these figures in the patent application.

Utley: We should be on figure 7.

Bernstein: Steve, figure 7?

Becker: Okay.

Bernstein: Are you looking at it?

Becker: Not in front of me, but I recall writing it.

Bernstein: Jim, figure 7, what do you see?

Armstrong: I don't have a figure 7...because that was part of...that didn't come in the patent application, that I was mailed~~but []~~.

Bernstein: It's not part of that final patent?

Armstrong: I don't know about that, but it didn't come as part of that Word document.

Bernstein: That's what I just sent you, ~~that's~~ supposed to be the final revision of the patent.

Becker: We have to scan the drawings into a Word document; so if you just mailed the Word document, you probably didn't get any figures yet.

~~Armstrong:~~ Probably the figures were left off of that Ei-

Bernstein: Okay, do you have your patent application?

Armstrong: I've got the one we reviewed on Tuesday Wednesday.

Bernstein: And what's in there?

Armstrong: All the figures.

Bernstein: Right or wrong?

Armstrong: You know, I don't know. I didn't...Brian, was figure 7 changed at all with the restatement of our aspect ratio?

Utley: Yeah There were some additions that I made for clarification purposes. Uh If you look at the first page of the imaging process, where it says, uh uh the third box down, it says "viewing image," uh I inserted uh "SIR less than DWR" to tie it to the equation above it. And then in the one, the bottom, uh uh it has the expression "SIR greater than BWR," again, that is to tie it to the equation above it.

Armstrong: Yeah, because those two don't have a distinction, figure 7 as it is now.

Utley: Right. So that simply ties the image to the equation.

Armstrong: So do they have...have you sent them an updated amendment?

Utley: Yeah, that went out uh uh late Wednesday afternoon.

Armstrong: Okay, we've just got to make sure that the corrected figure 7...

Bernstein: Steve, can you fax us the filed patent?

Becker: No, I can't find it. I guess Doug took care of this from...

Bernstein: Does his secretary have a copy?

Becker: ...Monday night on. I spoke with her, and she wasn't clear...she wasn't able to find it.

Bernstein: Do we have a filed patent?

Becker: How certain would you like me to answer that question? I mean, Doug sent me an email saying we filed the patent.

Bernstein: Well, what he sent me that he said he filed is missing the diagrams. So, I have a final patent document missing...

S. Bernstein: When is Doug available?

Bernstein: Yeah, does he got a cell phone or something?

Becker: I don't know. I don't know. Maybe I can help clarify this...I mean, Eliot, you sound like you're really upset at us.

Bernstein: You know, I'm not a person to get upset until I see that I spend a lot hours going through this, Brian spends a lot of hours, we make all of these global changes...

Becker: Eliot, I've heard that a couple times already. Let me try to explain a little bit about patent law and maybe help everyone understand what has or has not happened. Okay, there's a lot of rhetoric being thrown on there, but there's...

Bernstein: Yeah, because we're blind.

Becker: I don't think all of it has a lot of basis in patent law.

S. Bernstein: That's good to hear, so let's hear that.

Becker: Okay, and Si, I thought you in particular might be interested to hear that.

S. Bernstein: Yeah, that's, you know, I'm not sure that adds any comfort because maybe what you're saying is it's not an exact science and then you move along...

Becker: Well, I'm going to go well beyond that.

S. Bernstein: Okay.

Becker: Does anyone have a copy of claim one they can read off of?

Bernstein: Yes.

Utley: Uh uh This is only a piece of it, right? |

Bernstein: Yeah.

Armstrong: It's Page 22. |

Becker: I'm working off what you emailed me, Jim, and I see page 24, lines 1 through 7. I guess they could have repaginated, but...

Armstrong: Oh, but Eliot had mailed you...or faxed you...

Becker: I'm sorry, what you emailed me.

Armstrong: Oh, okay. So it's changed then. I don't know why, though.

Becker: On the top of the page says "What this claim is."

Armstrong: "What this claim is"...

Becker: Do you have that?

Armstrong: Yes, page 22 in my printed on.

Becker: Okay.

Bernstein: Okay, hold on one second because I want to get my notes.

UtleyS. Bernstein: What page is that, Jim?

Armstrong: Page 22 You don't have it, BrianSi.

S. Bernstein: Because I don't have 22.

Armstrong: Want me to fax it... email it to you?

S. Bernstein: No, that's okay, he's going to explain it to me. I want to see if I can't understand this.

Becker: Sure. It's very sort claims, seven lines long. It actually defines the scope of the patent protection that we are trying to obtain in this filing.

Armstrong: Who are we waiting for, Eliot?

Becker: I ~~think~~ believe so.

Bernstein: Yeah I'm up front. We're waiting for Brian again.

Becker: Let me know when you're ready.

Bernstein: Okay, Steve, Brian stepped out for a minute, but I still want to address this issue. We invent something. I hire a mathematician. The mathematician solves the X, Y, and Z of the invention. Does he claim a new patent for himself?

Becker: Probably not. [Inventorship] typically follows with the conception of invention. If somebody else figures out how it was done, generally speaking that would.

Bernstein: Well, I want to be very ~~clear~~ clear on this because Doug's thinking...I don't even know if then the next statement is correct or incorrect, but if a macro was created using the math that comes from the invention, where does it follow? Brian, I just asked him, if I hired a mathematician to do the math, put all of this into a thing, where does this follow. He says the invention, the inventor, etc. The guy you hired to do math wouldn't claim a new patent or a new invention, which is confusing to me because Doug now, as of this morning, told me that you're planning on filing a separate patent as inventor of a macro that just spawns off the math entitled to this invention. So I'm confused, and I want to be very specific on this of what our strategy is here on all of these peripheral pieces.

<End Side 1; begin Side 2>

Bernstein: Why don't you explain that to me again.

Becker: Can we go ahead with describing the claims?

Bernstein: Well, do you want to just finish that real quick, and then we'll go right back to the claims?

Becker: Okay, now what was the question you posed me, Eliot?

Bernstein: I hired a mathematician to solve for what I did. He comes up with an equation. Where does that equation belong? Does it belong filed as another patent? What's the inventorship, so to speak? And then, I design from that math a macro that solves that math with input formula. How should we be protecting that the whole way through, because I seem to be very confused about what I'm being told each day.

S. Bernstein: Okay, let him answer the question.

Becker: Inventorship follows whoever conceived the invention as claimed, and that's why the claim is so important because when you set forth in your claim what it exactly is that you're claiming, you have to ask who conceived of that idea—who was the first one to come up with it. So, typically if somebody really reduces your idea to equations that describe why it works or how it works, typically they would not be named as a co-inventor because they really didn't invent the idea. Now if you wanted to claim a macro which has user-input displays for receiving certain data that can be used by, say, a technician to determine the scan density of a print film image that would allow for the desired enlargement ratios and the desired target image size, that kind of is a separate idea, and that's why we thought it would be useful to claim that as a tool as well.

Bernstein: Okay, and I understand that part. I don't mind claiming that all day long.

Becker: Brian really was the one that built that and came up with it. It's based on principles that you learned, you know, a few years ago that maybe you didn't understand the math behind them, but certainly, I would think, be named an inventor on that.

Utley: I think that would probably claim both Eliot and myself as it relates to both aspects.

Becker: Right. But the important thing with the patent office is that it is...the patent office realizes that it is a bit of a grey issue in terms of who conceived what, so the important thing is not to have any deceptive intent.

~~S. Bernstein~~Armstrong: I think the most important thing is the distinction between inventorship and ownership. As I understand, all of this, every one of the patents that we have filed, all rights, title, and interests are iviewit's, regardless of who the author/inventor is; and any revenue stream derived therefrom are iviewit's, and that's the important thing. Is that true, despite and in light of the [__]?

S. Bernstein: Well Jim that's May very next question

Armstrong: r because we could put anybody as an inventor; but as long as that doesn't entitle them to a disproportionate share of any revenues derived therefrom, then I don't care.

Becker: Yeah, inventorship or ownership initially vests in the inventor or inventors who are named in the application; but typically, inventors are under some obligation to assign to a corporate entity, either written or by cause of their employment—and you can get into the issues of shop right...you know, if somebody invented something on the corporate time and then went and...you know, it wasn't really part of his job description, I know this issue's going to be a little more tricky. But I think in this case...what we do typically as a practice to confirm ownership is to have the inventors sign a written assignment document over to whichever corporate entity they want to...

S. Bernstein: But haven't we followed that?

Becker: We've got those documents. I don't think we have them all signed and filed yet.

~~S. Bernstein~~Armstrong: Let's get them.

Utley: Well, Doug was doing that on Tuesday while he was here.

Becker: Okay. Did you do some signing of documents, Jim and Eliot?

Bernstein: Yeah. Right.

Becker: Okay, so that's in process.

Bernstein: Okay, and wasn't really the intent of my question. The intent of my question is to define, for my understanding, what should claim back to Ray [Joao's] patent, and that means that everything other than a macro shell should define back to the original patent and be filed, corrected, amended, however we get it in to the original patent documents since none of it's

new matter, it's just an explanation mathematically on every equation of what happens.

S. Bernstein: That's what I heard at the meeting.

Bernstein: And that is exactly what I've heard, repeated; and then this morning, it was completely opposite, and yesterday it was a little opposite—a little—and, you know, I've become very confused about which strategy we're taking, which road, because we decide something, and then it's changed, and we're doing something else, and I'm completely lost.

Becker: I think I can make this very clear for you if you'll give me an opportunity.

Bernstein: I will.

Becker: Let's take a look at claim one. Claim one states that what you're claiming is a method of providing a digital image file for viewing on a user display in a viewing window that has a predetermined size, and the method includes one step. The step is, very broadly stated—so bear with me here—providing a digital image file having a image size comprising a fixed number of pixels representative of an image wherein that image size is greater than that of the viewing window size. Now the broad concept that we're trying to claim here is being the first ones to provide a digital image file that has more data than is needed for the window size. And why are we trying to claim that? Because that allows you to zoom into the image without pixelation, and it allows you to pan around the image to corners that maybe are not shown in the original viewing window. Does everybody understand that?

Ullery S. Bernstein: I think so.

Armstrong: Yes.

S. Bernstein: I think we're on the same line.

Becker: Okay. So now the question becomes: Did we support that claim with relevant descriptions in the specifications. And what's our standard? Our standard is that we have to provide enough disclosure in the specifications to enable somebody to make and use that invention as claimed. This person needs to be somebody of ordinary skill in the art—in other words, somebody who can read this document and maybe has some technical background in imaging or image processing, for example, and can read what we've put in our document and can perform our methods claimed. Okay? Everyone with me so far?

Bernstein: Um, hm.

Becker: So we look back into the document that was filed on Wednesday and we say to ourselves, "Did we provide enough information in that document to allow somebody to teach somebody how to make and use a digital image file that has an image size greater than the viewing window size?" And one might argue that stating the solution in itself almost provides enough information to one of ordinary skill in the art to actually reduce this to practice and to make and use one. However, we've provided not only a description of several different ways of doing it, but also some examples, including math, that should make it abundantly clear to one of ordinary skill in the art how to do it. The test is whether it would require undue experimentation on the part of this fictitious person of ordinary skill in the art to make and use a digital image file having these characteristics. So the question you need to ask yourself with respect to this application is: "Okay, maybe there was an error or two in how it was expressed in examples or the number of pixels counted or division here or subtraction there, but was there enough in there to enable somebody, based on those teachings alone and, of course, their background, to make and use an image file having those characteristics?"

Ullery S. Bernstein: Okay.

Becker: And I think, based on a reading of it and based on what Jim just walked me through in these corrections that need to be made, that there probably was enough

in there. That there probably is. I mean, we've described in several different ways how to do it with print film images or with digital images. We described in generally, and then we went and described it specifically.

S. Bernstein: Okay. Can I ask you a question?

Bernstein: Wait, Dad, because that still doesn't answer my question. That answers this issue here.

S. Bernstein: Let him finish with it.

Bernstein: Okay. Are you going to take this back to Ray's original filing on our...

Becker: Let me do that next, okay? Now, with respect to Ray's original filing on August 2nd of last year, we asked the exact same inquiry when we review the specification that we filed on Wednesday: Did Ray's filing back on August 2nd of 1999 provide enough disclosure and enough teaching to enable one of ordinary skill in the art to make this file?

Bernstein: And we have a lot of disputes on that because it doesn't even cover zooming.

Becker: Right, but what it does describe, if I recall correctly, is it does describe that you want to enlarge a print film image to a certain size and then scan it at a high density. Now it doesn't tell what density, it doesn't give a number of pixels,

Bernstein: It doesn't talk about zooming in on the image.

Becker: It doesn't tell the number of pixels, but it does show one way of doing it with a print film image. It doesn't talk about digital images...doing it specifically with digital images. It may refer to it generally, I don't know. But that is the inquiry.

~~S. Bernstein~~Armstrong: If I hear you correctly, it is less important in the claim to say anything relative to zooming was in the claim to illustrate or to claim that the target image size is larger than the viewing image window because that is, in itself, your ability to have the zoom capability.

Becker: You're right. You can claim it all different kinds of ways. This was one way that we worked out in conjunction with Eliot and Brian two weeks ago. This is one of the ways we worked out claiming the invention.

~~S. Bernstein~~Armstrong: Because ultimately zooming is simply a feature of the invention.

Bernstein: Okay, hold on one second. Steve?

Becker: Yeah.

Bernstein: When I look at Ray's claim one, "What is claimed: An apparatus for producing a digital image comprising a device for generating a digital signal file from a print film image and a processor for processing said digital signal file and for generating an image file wherein said processor generates a first signal file from said digital signal file, and further wherein said processor processes said first signal file and generates set image file."

Becker: Okay.

Bernstein: Okay, we all agreed that that is completely insane...to describe anything about our invention...whatever.

Becker: I know it's all completely insane; but I think that with the claim that we drafted, ...

Bernstein: Yeah, he missed the point.

Becker: Okay.

Bernstein: Well, then, the claim we drafted, this was my question. It should be right here, in this claim, in the patent he filed to date back as far as I can to protect our dates, should be changed to the claim we just created.

Becker: Oh, no, this application died on Wednesday, and it doesn't proceed to a patent. A provisional application...

Bernstein: No, no, this isn't provisional. This is a filed patent. I'm ~~dealing with~~ one

Utley: This is the one that was filed March 24th.

Becker: Oh, okay.

Bernstein: By Ray [Joac].

Utley: So this was the PCT filing on March 24th.

Becker: Okay, thanks.

Bernstein: And my question is shouldn't the claims in this patent we just filed be exactly, if not identical, to the one...or should they be transposed to Ray [Joac's]? And it was my understanding from Doug that for speed and if the patent gets through, etc., that we would rather have it be based on that first patent filing.

Becker: That could be a recommended course of action.

Bernstein: And this is going to get dejected.

Utley: What we discussed on Tuesday...no, on Monday afternoon, was that uh one of our action items was to go back and review the uh March 24th filing and decide exactly how we were going to integrate into that filing the uh the uh claims that are that should be in there vis-á-vis the specification.

Becker: Okay.

Utley: That was one of the action items that we uh uh covered on Monday afternoon.

Bernstein: And now my question further goes to say that once we amend the claims, is there any way to amend the body?

Becker: No.

Bernstein: Even if we're not adding new subject matter?

Becker: You can amend the body if you don't add new subject matter.

Bernstein: Okay, so we can fix Ray's mess.

Becker: You can't add what we added in this application.

Bernstein: Which part? The math is just a description of the old matter, so therefore we should be able to add it.

Becker: It's not supported. It's not suggested in the prior applications.

Bernstein: Oh, it's all suggested because by the nature of the invention it's suggested.

Becker: I think the patent office will never allow us to add all of that matter into the application.

Bernstein: Okay, but we should add as much matter as we feel comfortable with to buff up Ray's original filing.

Becker: Sometimes if you change a word or a sentence in a specification...

Bernstein: Yeah?

Becker: The examiner will outright reject it for new matter.

Bernstein: Well, who cares? He's going to reject this for insanity in the first place. I mean, he's going to reject this for "what did you patent? Nothing?"

S. Bernstein: If I'm hearing Steve right, there's very little we can do to change the language and content of that particular patent...

Bernstein: No, you're not hearing him right because he just said you could change all of the claims whenever you want as long as the examiner hasn't approved them. And right now before the examiner starts approving...looking at this and saying it's nonsense, I'd rather get the right stuff in there. Now, we can get most of this stuff in there, albeit I'm going to need good argumentation as to why we can't get it all in there.

~~S. Bernstein~~ Armstrong: Steve, is that correct?

Becker: We can change the scope of the claims of the prior application...I mean, that's a good action item, a good thing to do. You know, as I mentioned, it's unlikely we'll be able to change the specification substantially; and if we don't quite...

Bernstein: Well, we should throw in the word "zoom" if we can.

Becker: At some point it becomes a question of language and what language you've used. If we come in and start saying, "Well, what we really were talking about is zoom and pan," Yeah, it's possible we could get some of those arguments through the examiner, but...

Bernstein: Well, we sure as shit should try.

~~Uteley~~ Bernstein Well, it looks like Ray took all of this out of here.

Becker: It's not as critical as getting one good filing on like we did on Wednesday.

~~S. Bernstein~~ Armstrong: Yeah, but the date's what's important.

Bernstein: Right.

~~S. Bernstein~~ Armstrong: If this March one...we have one good filing, but it's dated August 2nd. That's the difference.

Becker: But it claims priority back to...

Bernstein: The original provisional.

Becker: The original provisional, which is before this date, again to the extent that it's...

Bernstein: Right, and that's the strategy I have been hearing is the correct approach here, is that we should be cleaning up Ray's filed patent as best as we can without adding subject matter--and I don't think we really have any new subject matter other than a macro shell to re-widget our math, which is okay, we'll leave that out. But I definitely want the underlying math, because that's just not new subject matter, that's just old subject matter defined, and try to get as much of this in that examiner's hands as fast as we can because that is our first patent and we'd like it to approve. And then you know what? Leave the macro in this one, and then you've got a reason that you've got new matter in this one that doesn't conflict with your old matter. I mean, the math, I sat through with Doug, went through this with Chris Wheeler, my father, I heard all of those things, and then I'm hearing that that's not our strategy. So I just want to be very specific on this so that we get that completed in time. I know there are issues to timing, etc., that we don't want to wastewait.

Now, I'm also confused of how we particularly predicted our date as well on when this was first exhibited. According to my last notes of when you guys were down here originally, we kind of went through a timeline; and that timeline has now been changed to September, when, in fact, we felt it was more like April or something as the first commercial advantage. Now Doug's talking to me about September dates, and I can list you fifty things that occur before then that will be detrimental. As a matter of fact, the first one really being something like 8/10, which only gives us six days, if my numbers are correct. We signed a license contract with

[Centrec? Centrack?] to use and distribute your product. So that's well before 9/1; and these are some real critical things that depend on that date, if I'm not mistaken.

Utley: What contract?

Bernstein: [Centrec? Centrack?]. The license agreement was signed on 8/10.

Utley: The only thing we signed was a demo.

Bernstein: A demo license, yeah. Well, you were putting it up to commercialize on their site-- on a public site.

Utley: But there was no charge.

Bernstein: But it's not a question of charge, according to Doug. Correct, Steve?

Becker: I need to have some facts.

Bernstein: Okay. We signed a demo to put up on a company's Web site, and we did, our materials for public viewing so that they could identify customer response.

Becker: Oh. When was this?

Bernstein: 8/10.

Becker: Okay.

Bernstein: Now, there were conversations prior to that.

Becker: Well, the upside is that we've got an application on file as of this past Wednesday.

Bernstein: Well, what about changes?

~~S. Bernstein~~Armstrong: We have to deal with that one year of commercialization.

Bernstein: If we're not wrong, and I hate to preach to a lawyer, but that seems to be my understanding. So I'd like to get what is claimed in this one into Ray [Joao's] immediately, if not, somehow sooner.

Armstrong: Well, hold on, let him answer the question about commercialization. Would that be considered the first date of commercialization or a date of commercialization if there's one prior to it?

Bernstein: There's not, but...

Becker: Again, we have to start with the claimed invention...

Armstrong: This was ~~+~~zoom & pan imagery that we did for him.

Becker: Okay. And the inquiry is whether or not...

Bernstein: No, it's video, too, B, that we did.

Armstrong: There was video, too?

Bernstein: Sure.

Becker: The inquiry was whether or not the claimed invention was on sale more than one year before the filing date of the application.

Utley: This was a test program to determine feasibility.

Becker: That actually works in our favor. The laws recognize sort of experimental use as sort of being a mitigating factor in some types of public disclosure. Typically if it's a commercialization use, or to test the commercialization of the invention, they're less likely to find it to be...

Bernstein: Well, then, that's definitely what it was.

Becker: ...commercial use.

Utley: Is there any difference, Steve, between...we signed an agreement to do that.

Becker: Okay.

Utley: There was no public visibility for another month. So which date will be the reference date?

Becker: Would you call that a sale, that agreement?

Utley: No.

Becker: Okay.

Armstrong: Were we ever paid anything by [Centrec? Centrack?]?

Bernstein: No.

Utley: No.

Armstrong: Never.

Becker: Okay, that certainly works in our favor if it wasn't an actual sale of your product. In that case, you look more at the public disclosure date.

Bernstein: Well, that was the public disclosure date.

Utley: No, that was September.

Bernstein: No, it was this date because...well, whenever you put it up on the site publicly.

Becker: When did you put it up on the site publicly?

Utley: It was in September. It took us awhile to get there.

Becker: Okay. No problem, then, right?

Bernstein: If that's...I'm hanging my hat on a lot of things right there.

Utley: If that's the date of reference...

Bernstein: You know, I want to beat the 8/10 day of signing a license agreement because I don't know how that's going to be construed in court, nor do I care, when I can beat it right now.

Becker: Let me ask the question again, Eliot, do you think that the application that we filed on Wednesday does not provide enough information to enable somebody of ordinary skill in the art to practice or to make and use what we claim in claim one?

Armstrong: I could argue it doesn't.

Becker: Go ahead.

Armstrong: I might just simply because the actual deployment of it...or employment of it...does require the correct execution of those formulas; and other than one particular error that is very, very difficult to understand unless you have been part of one of these conversations about the formulas. I mean, that you have to reverse-engineer the formulas to find out that the square root in that definition is missing, otherwise you'll end up with target image areas of an enormous size and be totally lost. You'll end up just having a goofy result. I mean, I think it could be argued, that you need to be able to apply the math to create the image. It could be argued that you can conceptually create what it is that we are conceptually defining, but it's more difficult to do that without a precise understanding of the relationship of targets of subject images and viewing windows.

Becker: Well, let me turn it against you, Jim. That's a good analysis. I think it's interesting, but let me turn it against you and say if that's true, then our August 2, 1999, filing doesn't provide enough disclosure to enable one of ordinary skill in the art to make this claim.

Bernstein: On Ray [Joa's]?

Becker: ~~CONNECT~~Right, what he...

Bernstein: Yeah, that's why we want to change it before August 10th.

Armstrong: You said the August 2nd filing. This is the one we just did.

Bernstein: No, the March 3rd filing you mean.

Utley: March 24th.

Bernstein: March 24th, whatever.

Becker: Well, I guess I'm going as early as I can, which is why we tried to file on Wednesday...which is why we filed on Wednesday, so we could get the priority on the provisional application which, if I recall, read very much like the March 2000 application.

~~S. Bernstein~~Armstrong: The one you're referring to is the original provisional from August of 1999.

Becker: Yeah.

~~S. Bernstein~~Armstrong: Saying that if my argument holds, we have nothing of solid validity in that particular document.

Becker: No, what I'm telling you is that that document won't provide priority to this claim. In other words, our priority date will be Wednesday of this year, not Wednesday of last year...or not...

S. Bernstein: Because that provisional didn't provide somebody with ordinary skill in the art the ability to replicate what we did?

Becker: That's exactly right.

~~Bernstein~~Utley: March 24th

~~Bernstein~~...isn't that the one we're looking for?

Utley: March 24th?

Bernstein: Oh, no, that's the...

Utley: We're looking for the August one.

Bernstein: No, I'm looking for the provisional this claims to.
<Two separate conversations going on at once; difficult to hear and follow...>

Becker: Let me ask you this...

S. Bernstein: Then that's to say--and maybe I'll question my own logic now--is it enough to say that somebody understands that in the viewing window that you create zoom and then create [] ability?

Becker: As long as we just...

Armstrong: That optimized the particular...

~~S. Bernstein~~Armstrong: And all we did was help to clarify...

Becker: I think that's pretty convincing. You know, you don't have to enable all the ways of doing it; you just have to enable essentially one way of doing it.

Bernstein: Okay. Despite all of this, I still want a firm yes or no.

Becker: I think was actually critically really finally getting to the issue.

Bernstein: No, yeah, we are.

Becker: Away from the rhetoric of accusations and...

Bernstein: Okay, okay, right, but...

Becker: And fear-mongering and calling the investors. I think we've gotten to...

Bernstein: Well, I mean, we've got to deal with things. These are real fears meaning we definitely have real issues. But looking beyond that, which is fine, I've got still an unanswered question: Does Ray [Joao's] set of claims change tomorrow, Monday, whatever, so that we can protect ourselves? Now you've agreed that's a good strategy, Doug's agreed that's a good strategy, but yet I hear no execution strategy, and that's what I want to make 100% sure that I can get as much of what we've discovered into Ray's incompetent work, and I will call it that, as possible. And your work is far more superior. These are some issues, but, you know, there's issues...it's a large thing to grasp, and we'll get through it. But I want to change what Ray [Joao's] done, and that was my understanding that we're going to take the claims that we've discovered in this application you just filed and put them into that one, and that the worst that's going to happen is that the examiner will approve the earlier one of Ray and yours will fall away, the second one.

Armstrong: Did somebody just join this call?

Bernstein: No.

Armstrong: Did you hear that beep, beep, beep?

Becker: I did. I don't know if anyone has joined.

Bernstein: Si? Si?

Armstrong: Maybe he got off.

Bernstein: Yeah.

Armstrong: Okay.

Becker: Well, let's do this, Eliot. Let's say that...I know you are concerned about the August 10th date, why don't we say that we will make some amendments to the claims in the prior filings you're referring to, and we'll clean that up as best we can and make sure that we have the claim amendments...

Bernstein: <Aside to Utley> This is the one we filed?

Utley: <To Bernstein> That's the provisional.

Bernstein: <To Utley> That's the provisional?

Utley: <To Bernstein> Right.

Armstrong: What about correcting the math in the one from two days ago?

Becker: Yeah, then again, I don't know what was filed; and again it appears...I really need to consult with Doug on that.

Armstrong: Yeah, but if we're of understanding what we talked about today is what he filed, and I believe that's it, then what do we do to correct that? We should probably correct that by the 10th as well.

Becker: Okay. Right. That actually was more important with the 8/10 date because these changes are considered to be better, then we need to get a filing out by that date.

Armstrong: Okay.

Bernstein: And Steve, just to remind you on this point, I still definitely for a comfort level and to keep accusations at bay, just a letter of what's occurred, what my risks are, and what our strategies for execution are on this filing relating to as well fixing this one as well as relating it to Ray [Joao's]. If you could write that clearly to us, that gives us a lot of comfort level.

Becker: All right. Hopefully what I explained today about priority will help.

Bernstein: Well, this gives it the final touch of you can rest assured, I've got it in writing. That's what I need to comfort me that I've got a strategy, that everybody's on the same page, so to speak, so that page doesn't shift, so that we don't get off that strategy and we all stay focused on that one sheet. So that would be critical. And what is our next due date? Is that on the 10th or the 8th or something, or am I missing...

Utley: Well, the only reason the 10th has any potential bearing is because that's when the test license...

Bernstein: I'd like to beat that here, on this claim, because if we can beat the 10th here on Ray [Joao's] filing, that's what we need to do there, right?

~~Becker~~Armstrong: That's actually not an important date for Ray [Joao's] filing.

Bernstein: Yes, it is.

~~Becker~~Armstrong: An important date for the filing that we did a few [weeks? days?] ago.

Bernstein: No, no, it's the same date. Commercialization is commercialization, and how it relates is the same here to us.

~~Becker~~Armstrong: Okay.

Bernstein: You know what I mean?

Becker: Yeah, I guess I do.

Armstrong: I'll make just one other general comment, Steve. Everyone else knows this, but you don't. I was just brought into this process Tuesday as the first time I've ever reviewed any patents. I've held them for Eliot in the past but never reviewed them; and was probably surprised with what I found was that it was an extremely important and at least, to my understanding, we had very little time to get it right, and we're now paying the price, of course. To the extent that that can be avoided in the future through careful planning, updates, and contingencies, I suggest we have a plan for that.

Becker: Yep.

Armstrong: So. Just an overall comment.

Becker: That's a good comment. I think it's important to get things done as early as possible, and we certainly have tried to do that throughout the process.

Bernstein: Steve, can you do me one last favor?

Becker: Yes?

Bernstein: Shoot over to Jim the three video patents we filed. He's signed a disclosure on it—the one you gave us—encompassing him for all patents.

Becker: All right. Jim, what's your role?

Armstrong: I'm the Director of Sales and Marketing.

Bernstein: But he's also a shareholder.

Becker: Okay.

Armstrong: I've been with this since before anybody else.

Becker: I see.

Armstrong: It was just basically me and Eliot and Guy before anybody else started, but I've never been involved in the patent review.

Becker: Now you want me to send a copy of the filings...the video filings?

Bernstein: Yeah. Can you just fax them to him?

Becker: Sure. Let me make sure I've got this right. Okay. We've got three...no, five applications, about 100 pages. Is that fine?

Armstrong: Yes.

Bernstein: We have four. Sorry.

Armstrong: Are they emailable, or no?

Becker: Yeah, they are emailable.

Armstrong: Let's do that instead.

Becker: But then you don't have the figures. We can email....

Armstrong: Email those, and then just fax the figures?

Becker: Yeah.

Armstrong: Okay, cool. The fax number is 732-747-5569. Email is jim@iviewit.com.

Bernstein: And there's five video patents now. Correct, Steve?

Becker: I'm looking at my chart here: three US and three corresponding PCT [] applications that we wrote, and then there's a PCT video playback—that was the video playback invention—

Bernstein: Right.

Becker: And I think that's all.

Bernstein: Great. Let's get those out to Jim real quick. I'd like him reviewing those by the 8/10 date. Any changes, we're obviously going to try to revert to keep our 8/10 day as our commercialization day, giving us a little buffer if we're wrong.

Becker: All right.

Bernstein: You know what I mean? I mean because we don't know how people will interpret in the end what [Centrec? Centrack?] was, but to beat it would definitely give us a greater argument.

Becker: Yep.

Bernstein: So, all right, we'll pick this up...you're going to make those changes on this patent, correct?

Becker: I'm going to wait until I speak with Doug.

Bernstein: Okay, great.

Becker: To find out what was actually filed, and then we'll decide how best to proceed with amending that.

Armstrong: Steve, one more clarification. Did you say we have or have not had successful closure on the signing over of inventors' patents to the company?

Becker: I can't speak to that; Doug is working on that.

Armstrong: Okay, will you put that in our list of things to do...or your strategy that that gets completed?

Becker: Yeah.

Bernstein: Yeah, and B, I just signed as well as Brian and Jude and everybody. It's a large, thick document, so Doug should have an update, Steve, as to what is exactly signed. I think it was everything, correct? And we've got everybody here.

Armstrong: I've got emails that indicate that that was all done nine months ago.

Bernstein: No, it was, B, but then we filed patents; and then we thought the past was done, and now these new ones had to be done, so he came here, there was notaries here...it was, you know, it was a lot, but let's get an update on it.

Armstrong: I just want to see it in writing

Utley: In addition to that, everyone has individually signed a separate agreement with the company, conveying assigning to the company any intellectual property that's created as a result of their employment.

Armstrong: That I know. The key inventions, I just want to see that they've signed over because that's the value of the company right there. That's what I own stock in.

Bernstein: Correct. Okay. So let's get an update, and I think we're pretty close.

Armstrong: Okay.

Becker: Eliot, why don't we go through the list of things that you've asked me to do so we can be perfectly clear on this?

Bernstein: Okay.

Becker: The first is to amend Ray's PCT application, at least the claims, so that we have a good filing there, at least based on whatever Ray has in his specification. That's task #1.

Bernstein: Claims plus any additional language that's not new matter.

Becker: All right.

Bernstein: Okay.

Becker: You want a letter describing the...what was omitted or what was incorrect in this application filed Wednesday and to what extent that may have any bearing on rights.

Bernstein: Correct.

Becker: And also a course of action we feel is necessary to file new applications to amend these, make these corrections, or if there's something we feel we can do in an amendment that would not introduce new matter.

Bernstein: And our strategy going forward on this. By the way, that would mean our strategy as well on the video, correct? Because if there needs to be changes and the date did stick at 8/10, we need to make any changes we find by 8/10, correct?

Becker: Only if the changes are so substantial that they would jeopardize the ability of one skilled in the art to understand.

Bernstein: Okay, so critical errors. Okay. If we find them.

Becker: And that's why I think, you know...and if you're describing in your specifications how to make one, how to do it, provide most of the details. I mean, we've done a very detailed job of ...

Bernstein: No, I agree. I'm not...I agree. I see all that here.

Becker: Any time whatever we can get out of you guys in terms of describing how it works...that, in there when you describe a claim and there's an error, you know, there's an error in the math, will that dramatically affect and make it so somebody can't practice the invention at all, I don't know.

Bernstein: Right. So if it's critical by 8/10, it should be resolved. Correct?

Becker: With the video application, it doesn't help for us to go back and look at those. You guys go back and look at those and see if there's anything in there that you don't like.

Bernstein: Right. And if we find something in the claim, for example, that we don't like, we need to amend it by 8/10, right?

Becker: No.

Bernstein: Why?

Becker: Because the claims have to be supported by the specification as filed back on those dates, which were sometime in June...

Bernstein: Okay, but let's say all that fits, we also have the commercialization date.

Becker: The commercialization date...

Utley: I though <inaudible comment to Bernstein>

Bernstein: So we can go change the claims.

Becker: Typically [] prosecutions, as long as they're still supported by the specifications filed...

Bernstein: Right. So if we find any mistakes, we should change them, correct? In the video patents?

Becker: Yeah, as a general principle, that's a good idea.

Bernstein: Okay, good. All right. I think that sums up what we need. Send the letter to Si, myself, and Brian.

Becker: That's not a complete list of what you asked for me to do.

Bernstein: What else have we got? Sorry?

Becker: You've asked me to email to Jim Armstrong the three video applications and the playback application--the one playback application--

Bernstein: Right.

Becker: Now with respect to the video application, we have both PCT and US filings. Do you want us to send both of those? They've essentially identical--in fact, they are identical except the...

Bernstein: No. Just one.

Utley: Send the US.

Becker: All right, we'll send the US versions of those two. And we'll fax the figures. And element #4...Item #4 is to provide a written letter to Jim Armstrong regarding the assignment status of...

Bernstein: Well, that's to everybody. That's to Brian, Si, myself, Jim.

Becker: Brian, Si, Eliot, and Jim.

Bernstein: Right. Just giving us the update of where we are.

Armstrong: I think it's helpful to communicate to the shareholders.

Bernstein: Well, let's get it first, then we'll communicate at discretion, but I think we're there.

Becker: Okay, then, in terms of general things going forward: Eliot needs to be cc:'d on all correspondence relating to patents. Should we continue our practice of sending things to Brian?

Bernstein: Yeah.

Becker: All right, we'll continue our practice of sending things to Brian and cc:ing Eliot with copies.

Bernstein: Right, and I'd appreciate if all that email comes to iviewit.com. Therefore, I have copied records.

Becker: Are you saying you only want us to correspond with you via email, not letters? Not...

Bernstein: No, but if it is emails, iviewit.com emails because that gives me complete copied records on tape backups.

Armstrong: ~~De~~—don't send anything to any of us at a domain name other than iviewit.com, if you send it in email. |

Becker: That's the instructions?

Bernstein: Right.

Armstrong: Correct.

Becker: Don't send to any other email address besides one of your names at iviewit.com.

Bernstein: Correct.

Becker: Okay. Anything else in addition to those items?

Bernstein: Nope. Steve, I appreciate your taking the blunt end of this, I really do.

Becker: Well, I just wish you would not...

Bernstein: Well, we freaked out a little bit. You can understand that there's a reason to freak...I'm not just making this up. So based on that, let's try to resolve and move forward. |

Becker: Anything else?

Bernstein: Nope. Thanks very much.

 5:23 PM

Dear Shareholders and Friends of Iviewit,

Today Iviewit's worst fears were realized when the United States Patent and Trademark Office (USPTO) contacted me regarding a certain provisional patent application in Mr. Brian Utley's name that we are supposed to have as the possession of Iviewit. I have attached the correspondence from the USPTO, which basically states that since neither Iviewit nor myself are listed on such applications we have no rights, title or interest in the patent application. Therefore, the USPTO cannot disclose any information regarding the application to us. I am astounded that our counsel Foley & Lardner who filed the application for Utley and Blakely Sokoloff Zafman and Taylor have never told us of this issue and never reported this to any authorities. In fact they made it part of the Company portfolio.

More disturbing is that this patent application has been listed on all of our portfolios (I have attached an excerpt from our most recent portfolio) prepared by the law firms Foley and Lardner and distributed to shareholders and investors as property of Iviewit. I am uncertain which application of Utley's this is ("Zoom & Pan Imaging on a Digital Camera" or "Zoom & Pan Imaging Design Tool") but either way it is not our property as represented on the portfolios. There has never been assignment by Utley or any of the law firms to the Company. I am saddened to report this loss to all of you but this is the case. There are several other patents Utley has found his way onto and we are also attempting to correct those. I am not sure what crimes this constitutes but I am checking with counsel as to our remedies.

As I have stated prior, Mr. Utley and Mr. William Dick, Esq. of Foley and Lardner have had similar patent problems in the past, which led to the loss of a business Utley ran for another South Florida businessman. Chris Wheeler our attorney from Proskauer Rose had set a company up for Utley, in which Dick and Utley wrote patents into, patents that related to Mr. Utley's employment as President of a lawnmower company Diamond Turf Equipment. The patent applications were for lawnmower stuff and Utley would not assign them to his employer when he was caught, he was fired with cause (opposite of what the resume submitted to all of you stated) and the company was forced to close, the owner taking a three million dollar loss.

I have been working with the USPTO who is looking into these matters and a team of their agents to attempt to attempt correct everything so that your investment may one day inure benefits to you, not Utley et al. I have found out that several patents we thought were assigned to the Company and its investors by our attorneys also have never been completed despite what we have been told. I will keep everyone posted as we find out more. Finally, I have attached an inventor change form, one of several that we have filed with the USPTO to correct this Utley insertion and deletion of Zakirul and Jude and inventors and it is signed by Stephen Warner of Crossbow Ventures who has recently been very helpful in his efforts to help the Company.

I truly am sorry for any misleading information that was distributed by these firms and it was no fault of the Companies (except in regards to Utley et al.) as we too were misrepresented. My heart nevertheless is truly broken with this news for all concerned.

Thank you,

Eliot I Bernstein

Utley patents with arrows

This portfolio was prepared and submitted by William Dick for the Virginia Bar and further corresponds to the one prepared by Foley and Lardner after Utley was found with two sets of patent books. Prior, Utley only patents were not in any records. Further it is wrong to list assets like 341 which are not the property of the Company on a patent portfolio that is distributed to shareholders and investors.

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

that what it is?

A. Yes.

Q. And Iviewit would be listed as a primary patent holder; is that how it would be?

A. They were assigned to Iviewit.

Q. They were assigned to Iviewit. Are you aware of any police report that was ever filed involving Mr. Mike Real and yourself?

MR. PRUSASKI: Objection, relevance.

By MR. SELZ:

Q. Go ahead and answer the question, if you can, sir.

A. There was a dispute over the nature of the equipment that I bought from Iviewit as --

Q. Well, that really wasn't my question. My question was are you aware of a police report? And it's really a yes or no type of answer.

MR. PRUSASKI: Objection, relevance.

THE WITNESS: I believe there was a report.

By MR. SELZ:

Q. Okay. Do you know who filed that report?

A. Iviewit filed that report as far as

Dear Eliot:

Being e-mailed (and enclosed herewith) are six (6) Powers of Attorney for the subject PCT Patent Applications, one Power for each inventor named in any one or more of the PCT patent applications, and one Power for the corporation, Iviewit Holdings, Inc. Three of the Powers require your signature, as follows: (i) one by you in your individual capacity; (ii) a second by you in your capacity as designee of the corporation to sign on behalf of Brian Utley (we hope the PCT Office will recognize Utley's having granted a Power of Attorney to his corporate employer); and (iii) a third by you for the corporation in your capacity as its Secretary. Kindly sign where your

signature is indicated on the three Powers of Attorney and return the original executed Powers to our office via mail (we need to have each Power with an original signature). Also fax each Power to us at (310) 820-5988, to expedite the process.

As we discussed, we request that you also forward each of the three remaining Powers to Jude R. Rosario, Jeffrey S. Friedstein and Zakirul A. Shirajee, respectively, for their signatures. Kindly instruct each of them to execute the Powers and to return the originals to our office by mail. In order to expedite the matter, request each of them to fax a copy to us, if possible.

If you have any questions, please feel free to contact my Assistant, Jan Gass. We appreciate your attention to getting the subject Powers executed and returned to us. We will then attend to their filing with the PCT Office.

Best personal regards,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN, LLP

Enclosures

cc: Ross Miller (w/Enclosures via E-Mail) ✓

P.S. to Ross Miller:

Ross, please attend to getting a Board Resolution appointing Eliot as the corporation's designee for signing the subject Power on behalf of Brian Utley. We talked about this in the context of giving Eliot comfort; however, the PCT Office may well request such a Resolution (in addition to a copy of Utley's Employment Agreement, which we already have).

Re: Provisional Patent Application No. 60/233,341
(Our File No. 57103/0123)

Dear Mr. Utley:

I sent you an e-mail message concerning the referenced application. As stated in that message, on September 18, 2000 a provisional patent application was filed on your behalf. The title of the application is "Zoom and Pan Imaging Design Tool". The application number is 60/233,341. Our file number is 57103/123. Mr. Boehm informed you of the filing of the provisional application in a letter dated September 22.

The application was filed without paying a filing fee in accordance with Patent Office rules that permit this procedure. In my letter of February 26, 2001, I advised you that the filing fee must be paid in order to maintain the pendency of this application. I received no response to my letter.

The time for paying the filing fee may be extended until June 4 at the latest by paying substantial extension fees to the Patent and Trademark Office. If you choose to send in the fees, I am forwarding to you a copy of the form that must be returned with your reply to the Patent Office, the Notice to File Missing Parts.

FOLEY & LARDNER

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION
FILED UNDER 37 CFR 1.53(c)
Filing Date Granted

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- **The balance due by applicant is \$ 200.**

*A copy of this notice **MUST** be returned with the reply.*

Re: U.S. Patent Application No. **60/233,341**
Filing Date: 8/02/2000
Title: Zoom and Pan Imaging Design Tool
Inventor(s): Utley, Brian G.
Our Ref.: 57103/123

Dear Mr. Utley:

A payment is due to the Patent Office in order to keep the referenced application pending. In order to expedite filing of the application and to defer payment of the filing fee, the referenced application was filed in the Patent Office without paying the filing fee. Patent Office rules permit this procedure. The filing fee is now due. In order to avoid abandonment of the application, we will need to file the executed Declaration with the necessary fees on or before **April 04, 2001**. If you want to maintain this application, please send us a **certified check** in the amount of **\$420.00** as soon as possible so we can get this taken care of in an orderly fashion.

Because of the long overdue status of your account, we cannot pay the fees on your behalf without advance payment in full. We will require a certified check or if you prefer you may wire transfer the payment. I will send you account information if you want to use a wire transfer.

FILING RECEIPT

OC00000005592299

Date Mailed: 12/04/2000

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Continuing Data as Claimed by Applicant

Foreign Applications

If Required, Foreign Filing License Granted 12/01/2000

Title

Zoom and pan imaging design tool

Preliminary Class

Data entry by : WASHINGTON, JAMES

Team : OIPE

Date: 12/04/2000

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15 (b).

PLEASE NOTE the following information about the Filing Receipt:

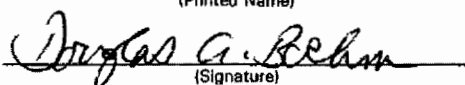

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

Assistant Commissioner for Patents
Box PROVISIONAL PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(c) is the provisional patent application of:

→ Brian G. Utley
 1930 S.W. 8th Street
 Boca Raton, Florida 33486

Enclosed are:

- Specification, Claim(s), Abstract, and Figures(¹¹²~~105~~ pages).
- Assignment of the invention to lviewit.com, Inc..
- Small Entity statement.

The filing fee is calculated below:

	Rate	Fee Totals
Basic Fee	\$150.00	\$150.00
[X] Small Entity Fees Apply (subtract 1/2 of above):	=	\$75.00
TOTAL FILING FEE: =		\$75.00

- [] A check in the amount of \$75.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

U.S. Provisional Patent Application
Title: Zoom and Pan Imaging Design Tool
Inventor(s): Utley, Brian G.
Our Ref.: 57103/123

Dear Brian:

Enclosed for your information and files are copies of the above-referenced patent applications that were filed with the U.S. Patent and Trademark Office on September 18, 2000. As soon as we receive the application numbers and confirmed filing dates, we will forward this information to you.

If you have any questions regarding this application, please do not hesitate to contact me.

Very truly yours,

Douglas A. Boehm

Enclosure(s)

Boehm: Well, then, talk to Brian because we were corresponding with Brian on that, and I don't know why you weren't getting it if that was the case, and I don't know which letter went to who, blah, blah, blah, but I do know that we mentioned that we didn't understand the math, and we were up to the third draft, if I recall; and you're right, Jim, that it shouldn't have taken...it shouldn't have been last minute and you should have had time to do it. I totally agree, but I can't take total blame for that...

Bernstein: But wait a minute. Steve has fundamental errors on understanding the math, and yet we're going to file it with him having math problems?

Boehm: It's your duty to either help us to understand...

Bernstein: But then I've got a point. We did help you. We sat on the phone for an entire day, walked through this...

Boehm: The day of the filing you mean?

Bernstein: And if this math is still wrong, I mean, there's something really fundamentally wrong here.

Armstrong: Let me check it again.

Bernstein: Yeah, let us call you back in a while. Is Steve in today, too?

Armstrong: I didn't get involved until Wednesday.

Boehm: Right.

Armstrong: I'll tell you one thing, Doug, that you should do as just a matter of course going forward. Eliot being the owner of the company and the person that Brian reports to is any future email correspondence should always be copied to him. That's kind of just a standard practice we all do in the company.

Boehm: To copy?

eliot Note	3/10/2004 2:19:24 AM
Boehm directed to copy company on patents and other matters	

Armstrong: Yeah.

Boehm: Okay. I didn't know that.

Bernstein: You ask me to review and sign these patents, and you're not sending me information. What do you mean.

Armstrong: I think had we known that there was a question of validating Brian's math, Eliot would have brought me in a lot earlier.

Bernstein: I would have brought a mathematician in. I mean, this is ridiculous.

Armstrong: Yeah, I'm just a friend that's good at math, not a mathematician.

Boehm: Right, well.

Armstrong: Go to your meeting. We're going to check this patent ~~stats~~-out, and we'll talk to you letter.

Boehm: Well, you've got to talk to Brian, too.

Armstrong: Yeah.

Bernstein: I think because I now seriously have to report a lot of things to a board of people that we're going to have to have a meeting at some point either today or Monday with a few of the key people in the company who are investors, etc., so that they understand what they are investing or not investing in.

~~Becker~~Armstrong: Don't jump to conclusions.

Bernstein: No, I'm not, but if this is correct, we've got some fundamental things that need to be discussed.

DECLARATION OF BARRY L. GROSSMAN
In Support Of And As A Part Of
Notice Of Withdrawal Under 37 CFR 1.36

I, Barry L. Grossman, declare as follows.

1. I am an attorney with the law firm of Foley & Lardner. I am a partner in the Milwaukee office of the firm. I am one of the attorneys of record in the referenced application. Several other attorneys at Foley & Lardner also are named as attorneys of record in the referenced patent application. The attorneys are all individually identified by name and registration number on the accompanying Form PTO/SB/83.
2. I am a member of the Bars of Virginia, the District of Columbia, and Wisconsin.
3. I am registered to practice before the Patent and Trademark Office. My registration number is 30,844.
4. This Declaration is submitted in support of and as part of the accompanying Notice of Withdrawal under 37 CFR 1.36.
5. The Notice of Withdrawal is submitted on behalf of all Foley & Lardner attorneys who would be named in the Power of Attorney to be submitted in the referenced application. In accordance with MPEP 402.06, I am signing the Notice of Withdrawal on behalf of each Foley & Lardner attorney who would be named as an attorney of record. Mr. Douglas A. Boehm, Registration No. 32,014, would also be named as an attorney of record. Mr. Boehm is no longer associated with Foley &

Lardner. However, I have been authorized to act on his behalf (Tab 1).

Accordingly, this request includes a request to withdraw on behalf of Mr. Boehm.

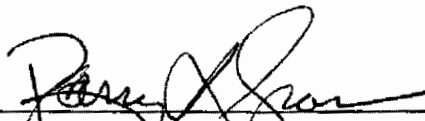

6. The attorneys at Foley & Lardner are seeking to withdraw as counsel in this application because the client responsible for the application, Iviewit.com, Inc. has a large and long-standing unpaid bill for legal services related to this application and other pending applications which it refuses to pay. Iviewit owes Foley & Lardner \$142,531.08. This amount includes \$117,396.16 for legal services, and \$25,134.92 for disbursements that we have paid on their behalf. These fees and disbursements relate to services we have provided on multiple different United States and PCT patent applications. We are seeking to withdraw in all pending applications.
7. On or about March 5, 2001, I was advised in a telephone discussion with Mr. Raymond Hersh, Chief Financial Officer of Iviewit, that Iviewit would not pay its past due bill and would not make any future payments to Foley & Lardner for legal services unless and until it was successful in obtaining additional financing.
8. On March 19, 2001, we advised Iviewit that not being paid for our past work, and not being paid for future work, was not an acceptable arrangement for Foley & Lardner. We offered to discuss a reasonable payment plan with Iviewit. A copy of our letter of March 19 is attached at Tab 2. We have received no response to this letter.
9. On April 3, 2001, having received no response to the March 19 letter, we again wrote to Iviewit to advise them that we were initiating steps to withdraw as their counsel in all pending matters. A copy of the April 3 letter is attached at Tab 3. We have had no response or reaction by Iviewit to our April 3, 2001 letter.
10. We have continued to advise Iviewit of all communications received from the Patent and Trademark Office, so they are aware of all actions in all their pending applications.
11. The status of the referenced application is as follows: As of the date of mailing the Notice To File Missing Parts Of Provisional Application mailed December 4, 2000, remains outstanding with the United States Patent and Trademark Office.

I FURTHER DECLARE THAT all statements made herein of my own knowledge are true, and that all statements made on information and belief are believed to

be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

Respectfully submitted,

Re: Withdrawal as Counsel for Iviewit

Dear Doug:

I am writing to inquire if you want to remain as counsel of record in the pending Iviewit.com patent applications.

Foley is initiating procedures to withdraw as counsel in all the Iviewit pending applications. The Power of Attorney form names individual attorneys, not a law firm, as the attorneys of record. Each attorney of record must withdraw. You are one of the attorneys named as attorney of record, along with other Foley attorneys. We can withdraw as counsel for all the Foley attorneys. However, since you are no longer a Foley attorney, we cannot withdraw on your behalf unless you authorize us to do so. Accordingly, I am asking whether you authorize us to act on your behalf and state to the PTO that you also wish to withdraw as attorney of record. If we do not include you in our withdrawal papers, you will remain as attorney of record. You can then either continue to prosecute the applications on behalf of Iviewit or submit your own withdrawal, as you choose.

If you want us to withdraw on your behalf, please so indicate by signing below and return the original signed letter to us. We plan on submitting our materials no later than April 25. If we do not hear from you by then, we will submit our papers without including you.

FOLEY & LARDNER

Doug Boehm

April 19, 2001

Page 2

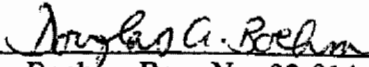

If you have any questions about this matter, please do not hesitate to contact me.
I hope all is well. Best regards.

Sincerely,

Barry L. Grossman

I authorize Foley & Lardner to act on
my behalf and withdraw me as an attorney
of record in all pending patent applications
in which I am named as an attorney of record
and which are assigned to Iviewit.com.

Re: Status of Pending Matters and Account

Dear Mr. Utey:

We need to resolve our continued representation of Iviewit in light of the overdue status of your account.

Iviewit owes Foley & Lardner approximately \$140,000. This amount has been outstanding for a significant period of time. I understand that Iviewit has adopted a policy of not paying service providers until it is able to obtain additional financing from investors. This arrangement is not acceptable to Foley & Lardner. We are not willing to remain as counsel to Iviewit or retain responsibility for your pending matters without getting paid for our past or future services. Accordingly, unless we reach a mutually acceptable accommodation about payment, we will timely and properly withdraw as your counsel in all matters in which we are representing Iviewit.

We will be willing to remain as counsel to Iviewit under the following conditions: (1) Iviewit begins immediately to make monthly payments of a minimum of \$20,000 per month, and agrees to pay interest at the prime rate for the unpaid balance, until the past due amount is fully paid; and (2) Iviewit pays in advance, both for professional services and for disbursements on your behalf, for any future work we are asked to perform.

FOLEY & LARDNER

Mr. Brian G. Utley

Iviewit.com, Inc.

March 19, 2001

Page 2

If the foregoing is acceptable to Iviewit, please so indicate by signing below and returning a signed copy of this letter to us, along with your first monthly payment of \$20,000. If we do not hear from you by March 31, we will begin to take all necessary steps to withdraw as your counsel. In withdrawing as counsel, we will not waive any of our rights to recover the money due to us. If you choose not to make a payment by March 31, please provide us with mailing instructions for return of your file materials to you or to substitute counsel.

I regret that we must take this action. However, your stated policy of not paying service providers, like Foley & Lardner, leaves us no choice. We cannot continue to represent Iviewit without payment for our past or future services. If you have any questions about this matter, please do not hesitate to contact me.

Sincerely,

Barry L. Grossman

By signing below and sending the enclosed check for \$20,000 to be applied against its past due account, Iviewit.com agrees to the terms stated in this letter.

Re: Pending Matters; Withdrawal As Counsel

Dear Mr. Utley:

We have not received any response to our letter of March 19. Accordingly, as stated in that letter, we are initiating steps to advise the U.S. Patent and Trademark Office and all applicable foreign patent offices or international organizations that we are no longer serving as counsel to Iviewit. We will instruct all of these organizations to send future correspondence directly to your attention. If you would prefer to have future correspondence sent to a different address, please provide us with the pertinent mailing information as soon as possible.

Enclosed are copies of Written Opinions received in your PCT International Application No. PCT/US00/15405 and PCT International Application No. PCT/US00/15406.

Sincerely,

Barry L. Grossman

FORMALITIES LETTER

Date Mailed: 12/04/2000

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

Filing Date Granted

MP
RESPONSE DUE 04 FEB 2001
DECL FEE

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 200.

A copy of this notice MUST be returned with the reply.

FILING RECEIPT

Date Mailed: 12/04/2000

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Continuing Data as Claimed by Applicant

Foreign Applications

If Required, Foreign Filing License Granted 12/01/2000

Title

Zoom and pan imaging design tool

Preliminary Class

Data entry by : WASHINGTON, JAMES Team : OIPE Date: 12/04/2000

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15 (b).

PLEASE NOTE the following information about the Filing Receipt:

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

How do we know this to be true, can't get info from USPTO	

Assistant Commissioner for Patents
 Box PROVISIONAL PATENT APPLICATION
 Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(c) is the provisional patent application of:

Brian G. Utley
 1930 S.W. 8th Street
 Boca Raton, Florida 33486

Enclosed are:

- Specification, Claim(s), Abstract, and Figures(¹¹²~~105~~ pages).
- Assignment of the invention to lviewit.com, Inc..
- Small Entity statement.

The filing fee is calculated below:

	Rate	Fee Totals
Basic Fee	\$150.00	\$150.00
[X] Small Entity Fees Apply (subtract ½ of above):	=	\$75.00
TOTAL FILING FEE: =		\$75.00

- [] A check in the amount of \$75.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

Date 9/18/00

**ZOOM AND PAN IMAGING
DESIGN TOOL**

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is related to U.S. Patent Application No. 09/630,939, filed August 2, 2000, and U.S. Provisional Patent Application entitled "Zoom and Pan Imaging Using
5 a Digital Camera" filed on even date herewith, a copy of each is attached hereto and incorporated herein by reference.

FIELD OF THE INVENTION

The present invention is directed to a system and a method for producing enhanced digital images and, in particular, to a
10 design tool for producing enhanced digital images having improved resolution for zooming and/or panning within an image.

BACKGROUND OF THE INVENTION

See Background in related applications.

DESCRIPTION OF THE INVENTION

15 The object of this invention is to provide a design tool for provide pan and zoom capabilities as described in the related applications.

Note that the relationship between the target image and the viewing image is very important, as described in the related
20 applications. By panning the viewing window, every portion of the target image may be viewed from each level of zooming. Zoom capability is provided up to a maximum level where the image begins to pixelate.

The preferred embodiment of the present invention is a computer spreadsheet program written in Microsoft Excel and its associated Visual Basic for Applications (VBA) macro language.

Attached hereto and incorporated by reference herein
5 are the spreadsheets, forms, and VBA program code for the preferred embodiment. Examples are given for different target and source image sizes. The design tool works for both digital and analog source images, but the scan density parameter is not applicable to digital images.

iviewit Imaging Setup

Application Overview

The iviewit proprietary imaging system is designed to provide clear, sharp images which can be zoomed into at great depth, and panned around at the discretion of the viewer, or under program control. The resulting experience is one of immersion into the image and an ability to view detail at a level heretofore not thought possible.

The fundamental concept of the imaging system is the creation of a 'Virtual Image' which is designed to be large enough to provide the level of detailed viewing desired. The Virtual Image is viewed through a 'Viewing Window' which is an allocated space on the user display device. The initial presentation of the image in the viewing window is normally a view of the total image. Since this is smaller than the Virtual Image, the Virtual Image must be scaled down to fit the viewing window. This scaling factor is referred to as the 'Maximum Magnification Factor', since, from the viewers perspective, zooming into the image has the appearance of magnifying the image.

iviewit Imaging Setup

ENHANCED DIGITAL IMAGE FILE**

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is a continuation-in-part of U.S. Patent Application No. 09/522,721, filed March 10, 2000, which claims the benefit of priority from U.S. Provisional Application No. 60/125,824, filed March 24, 1999. The present application also
5 claims the benefit of priority from U.S. Provisional Application Nos. 60/146,726, filed August 2, 1999, 60/149,737, filed August 19, 1999, 60/155,404, filed September 22, 1999, and 60/169,559, filed December 8, 1999.

10 **FIELD OF THE INVENTION**

The present invention is directed to a system and a method for producing enhanced digital images and, in particular, to a system and a method for producing enhanced digital images having improved resolution for zooming and/or panning within a single file.

15 **BACKGROUND OF THE INVENTION**

In the field of digital imaging, the primary design challenge is that the viewer desires ideal image quality delivered to the viewer's display system. In a limited-bandwidth network, such as the Internet, it is important to transfer the image data in a
20 reasonable amount of time. However, ideal image quality requires an enormous amount of digital data. Today's networks are not capable of transferring an ideal digital image in a reasonable time.

It is known that one can view a digital image on a display screen and "zoom" (i.e., magnify a portion of an image and

appearing to move into the image) and "pan" (i.e., move across or around within the plane of that image). However, prior attempts have failed to produce high-quality, high-resolution digital images having the ability to zoom within the image and pan around the
5 image without pixelation. "Pixelation" generally refers to the effect a digital image has when magnified, in which the pixels (i.e., picture elements) comprising the image become readily apparent to the human eye. More specifically, pixelation occurs when more than one pixel of the display monitor is used to represent one pixel of
10 information of the digitized source image. In prior digital image systems, when the image is magnified, pixelation occurs almost immediately and is very noticeable to the user as a substantial degradation in the quality of the image.

As used herein, the term "pixel" refers to the smallest
15 resolvable element of an image, either on a screen or stored in memory. Each pixel in a monochrome image has its own brightness, from 0 for black to the maximum value (e.g., 255 for an eight-bit pixel) for white. In a color image, each pixel has its own brightness and color, usually represented as a triplet of red, green, and blue
20 intensities.

The teaching in the art is to generate a digital image file having the same number of pixels, or less, as the number that can be shown in a target viewing window. This results in a small source image file size, thereby speeding the transmission of the image file
25 across a network. The target viewing window is typically maintained very small, e.g., 160 x 120 pixels, to further limit the number of pixels needed in the digital image file. Thus, the teaching in the art is to reduce the number of pixels in the digital image file to decrease the size of the image file before compression, so that the

compressed image file can be more quickly transmitted over a limited-bandwidth network. However, this teaching has been unsatisfactory in providing high-resolution digital images. It has also been unsatisfactory in providing digital images in large viewing
5 screens, such as, for example, full-sized VGA display monitor screens of 640 x 480 pixels.

Another example of prior systems is mapping or travel web sites. A user selects a desired location and the mapping web site responds by downloading map data from a map database.
10 When the user wishes to zoom into or pan around the selected location, the web site retrieves additional source data, e.g., additional new map images, and sends it to the user computer. One drawback of this type of system is that each zoom or pan operation requires the downloading of additional data over the network
15 connection. This method is slow, and does not allow the user to zoom and pan around a set of data unless the network connection is maintained.

Accordingly, there is a need for a system and a method for providing enhanced digital images. Further, there is a need for a
20 system and a method for providing enhanced digital images within which a user can zoom or pan without loss of resolution and without pixelation. Further still, there is a need for a system and method for providing enhanced digital images that can be transmitted over a network in a reasonable amount of time. Further yet, there is a need
25 for a system and a method for producing enhanced digital images suitable for uploading and for downloading to a display. Also, there is a need for a system and method for providing a digital image file suitable for efficient file transfers of high resolution digital images,

thereby dispensing with the need to engage in long and slow, conventional file downloads in order to maintain viewing quality.

SUMMARY OF THE INVENTION

According to an exemplary embodiment, a method of providing a digital image file for viewing in a viewing window of a user display, the viewing window having a predetermined size, includes providing a digital image file having an image size comprising a fixed number of pixels representative of an image. The image size to be displayed is greater than that of the predetermined viewing window size. The method further includes the step of associating a user interface with the digital image file. The user interface is configured to display the digital image file in the viewing window and to allow a user to zoom into the image displayed in the viewing window.

According to another exemplary embodiment, a method of providing an enhanced digitized image file to a user includes predefining a viewing window size in which the digitized image file is to be displayed to a user; providing a digitized image file having an image size greater than of the predefined viewing window size; compressing the digitized image file; and providing the compressed image file to a network server.

According to yet another exemplary embodiment, an enhanced digital image file is disclosed. The enhanced digital image file is displayed on a client computer display system having a viewing window, the viewing window having a predetermined frame size. The enhanced digital image file includes digitized image data representative of an image, wherein the digitized image data has a number of pixels sufficient to allow a user to magnify the digitized

image in the viewing window by a magnification factor of greater than one without appreciable pixelation. The enhanced digital image file further includes control data associated therewith for permitting the user to control the magnification factor.

5 BRIEF DESCRIPTION OF THE DRAWINGS

The invention will become more fully understood from the following detailed description, taken in conjunction with the accompanying drawings, wherein like reference numerals refer to like parts, in which:

10 FIG. 1 is a block diagram of a system for providing an enhanced digital image file according to an exemplary embodiment;

FIG. 2 is a flowchart of a method for providing an enhanced digital image file from a print film image according to an exemplary embodiment;

15 FIG. 3 is a screen print of a display screen on a user display illustrating an enhanced digital image file according to an exemplary embodiment;

FIG. 4 is a screen print of a display screen on a user display illustrating a zoomed view of the enhanced digital image of FIG. 3;

20 FIG. 5 is a screen print of a display screen on a user display illustrating a panned and zoomed view of the enhanced digital image of FIG. 3;

FIG. 6 is a flowchart of a method for providing an enhanced digital image file from a digital image according to an exemplary embodiment; and

FIG. 7 is an illustration relating a source image, a viewing image, and a viewing window to one another.

DETAILED DESCRIPTION OF THE INVENTION

FIG. 1 illustrates a system 10 for providing an enhanced digital image file according to an exemplary embodiment. System 10 includes a camera 12 which may be a conventional print film camera, such as, print film cameras manufactured by Nikon, Canon, Hasselblad, Kodak, or other manufacturers, or may alternatively be a digital camera, a digital video recording device (e.g., including 3CCD technology), an analog recording device such as a reel-to-reel recording device, a live video recording system, etc. In the case where camera 12 is a digital camera, camera 12 may further include a solid state storage medium or memory. Camera 12 may be mountable, such as on a tripod or on a stand, hand-held or fixed, and may include a 24-32 mm lens. Camera 12 is utilized to obtain an image of a scene that is being photographed or video recorded. The image may be a print film image (e.g., a high gloss, photographic print), analog image, digital image, negative, transparency, etc.

As a further alternative, system 10 may be utilized in conjunction with any imaging or video recording system, such as, medical imaging equipment. In this case, camera 12 may be an imaging device, such as a magnetic resonance imaging (MRI) device, an X-ray device, a microscope with a camera attached thereto, etc.

In the case where camera 12 is a print film camera, system 10 also includes a developing device 14, which can be any device or collection of devices, for developing the print film image taken by camera 12. In some cases, such as a POLAROID brand camera, developing device 14 is combined with and integral to camera 12. Developing device 14 is not required in an embodiment in which the image is a digital image.

System 10 also includes an enlarging device 16 for enlarging the image which is developed by developing device 14. The image may be photographically enlarged from a print film image, a negative, or other transparency.

5 The system of FIG. 1 further includes a scanning device 18, for scanning images or photographs in order to obtain a digitized representation of the source image in the form of a digital image file. Any suitable scanning software may be utilized. In an exemplary embodiment, a UMAX Astra scanner is utilized in conjunction with
10 Microsoft Photo Editor software. Scanning device 18 outputs the digital image file in a bitmapped format (e.g., BMP, TIF, GIF, etc.) The device may include compression software to compress the digital image file into a compressed format (e.g., JPEG). Note that, depending upon the specific type of camera 12 and desired
15 processing steps, a print film image from camera 12 may be provided directly to enlarging device 16 or directly to scanning device 18.

If the source image is obtained with a digital camera of sufficient resolution, the digitized image file from camera 12 may be
20 used directly without first creating a print image. On the other hand, a print image may first be obtained from the camera's digitized source image by sending it to a suitable printing device 20. In this manner, the printed image can then be optically enlarged and scanned to provide the enhanced digitized image.

25 System 10 also includes a computer 22 configured to process the digital image file created by the above-mentioned devices. Computer 22 may be a personal computer, a laptop computer, a mini computer, a microprocessor, a mainframe computer, a network computer, a server computer, or any other

suitable computer or computer system. Computer 22 typically includes a central processing unit (CPU), a read only memory (ROM), a random access memory (RAM), a display device such as an SVGA display monitor, an input device and/or an output device. Computer 5 22 may also include any other hardware device, peripheral device, or software necessary to perform the functions described herein. The input device may include a keyboard, a mouse, or other pointing device, or other devices for allowing user input. The output device may include a printer (e.g., a black-and-white or color laser or inkjet 10 printer). Computer 22 also includes an interface circuit for transmitting and/or receiving data over a network or link 24, such as, a local area network (LAN), a wide area network (WAN), an internet protocol network (e.g., the Internet, an intranet), a broadcast network, a satellite or cable television network, a digital 15 video transmission path, etc. Computer 22 may further act as a network server or may be in communication with such a network server. Furthermore, as will be seen below, the function of network 24 may be, in a simple case, performed by other components of the system. In this exemplary embodiment, computer 22 is accessible 20 by the Internet 26 via network 24 (e.g., a local area network).

A user computer 28 is used to access the enhanced digital image file stored in or provided by computer 22 (acting as a network server). Computer 28 may also load the image file to a storage device (e.g., a hard disk drive) to be used for display on a 25 display 30. User computer 28 may operate an Internet browser, such as Netscape Navigator configured to communicate with the Internet 26 or an intranet or other network.

Display 30 may be any type of user display, such as a cathode ray tube (CRT), liquid crystal display (LCD), hand-held

personal digital assistant (PDA) display, mobile phone display, etc. Display 30 normally has a predetermined display resolution (e.g., 1,280 x 1,024 pixels, 640 x 480 pixels, 320 x 240 pixels, etc.). Note that user computer 28 may be combined with display 30 in a single, integrated system, such as would be the case for a WebTV brand system, a high-definition television (HDTV), a PDA, etc. The combined user computer and display system may be referred to herein as the display system.

As will be described in more detail below, the computer display system typically has a viewing window on the display for viewing the image in a particular frame. The viewing window may be all or a portion of the total viewing area of display 30. The viewing window parameters, such as the viewing window area size and aspect ratio (i.e., viewing window width divided by viewing window height) may be under the control of user computer 28. In one embodiment, the viewing window area may be no more than 160 x 120 pixels in size, which is just a portion of the display area of an SVGA display monitor at 800 x 600 pixels.

References herein to frame sizes in pixels (such as, 320 x 240 pixels, 640 x 480 pixels, etc.) are intended to include equivalent frame sizes thereto. As an example, when rectangular pixels are used, the exact pixel count differs from the stated frame size. Thus, one equivalent to a 320 x 240 pixel frame size is 352 x 240. Accordingly, references to frame sizes in pixels are intended to include these and other equivalent frame sizes, and the teachings herein include any and all such insubstantial variations.

Referring now to FIGS. 2 and 6, exemplary methods 50 and 100 of providing an enhanced digital image file will be described. The enhanced digital image file can be generated from a

print film image or a digital image. The enhanced digital image file is a digitized image acquired with a digital camera, scanner, or other device suitable for digitizing an image into pixels. The method of FIG. 2 is suitable for processing a print film image; the method of
5 FIG. 6 is suitable for processing a digital image.

At step 52 of FIG. 2, an image is photographed or recorded by using camera 12. If camera 12 is a video camera, the video data is captured using a suitable capture device (e.g., an internal or external capture card, a Dazzle LAV-1000S capture device
10 manufactured by Dazzle, Inc. of Fremont, California, etc.). A single captured frame from the video camera may be further processed as a digital image.

At step 54, the image is developed by developing device 14 in order to produce a photographic print, such as a high
15 gloss photographic print. As mentioned, the step of developing may not be necessary in all cases (e.g., where the print film image of camera 12 is in a suitable format for subsequent enlarging or scanning).

At step 56, the developed image is enlarged by
20 enlarging device 16, if needed. In this exemplary embodiment, the developed image can be enlarged to sizes of between 8"x6" and 8"x12", or to any other appropriate size. The developed image is enlarged to provide additional photo information to scanning device 18. The developed image can be enlarged many times before the
25 granularity of the image is visible to the human eye. A photographic enlargement magnification capability of up to 1700 times or more may be attained for most views or scenes. It is, however, recommended that larger enlargement sizes be obtained for smaller developed images. As mentioned, the step of enlarging may not be

necessary in all cases (e.g., where the size of the print film image or developed image is large enough to provide sufficient data to scanning device 18).

At step 58, the enlarged image is scanned by scanning
5 device 18 in order to generate a bitmap image file or other digital
image file, such as, JPEG, GIF, or other files. Scanning should be
performed at a scan density that will provide the requisite number of
pixels in the resulting digital image file (e.g., 100 dpi, 200 dpi, 600
dpi, 1400 dpi, etc.) Contrary to the teachings of the prior art, a
10 large number of pixels are provided in the digital image file such as
would be within the particular file size and loading time constraints.
According to one example, a sufficient number of pixels are provided
in the enhanced digital image file to allow a user to magnify the
digitized image in the viewing window of display 30 by a
15 magnification factor of greater than one without pixelation.
Alternatively, a sufficient number of pixels are provided to allow the
user to magnify the digitized image by a magnification factor of 1.5,
5, 10, 20, 100, or more.

According to one exemplary embodiment, the number
20 of pixels provided in the enhanced digital image file is based on a
viewing window size and the desired magnification ratio. By
providing more pixels in the enhanced digital image file than is
required for a full-window view in the viewing window, the user is
able to zoom and pan within the digital image during viewing without
25 pixelation.

FIG. 7 illustrates the parametric details and relationships
between the different images and viewing window sizes. These
parameters and description are for the purpose of creating large, clear,
zoomable and pannable images from a variety of photographic,

source images. First, a "source image" (si) provides the original source of the graphical image information before it is digitally processed, as opposed to a "target image" (ti) that is the destination image to be transferred to the computer display system. In the analog case, the source image is not yet digitized. In other words, it has not been converted to a bitmapped format. A source image could be a photograph, a handwritten sketch, a computer-generated graphic, etc. In this case, source image is what is fed to the scanning device 18. In the digital case, the source image has already been digitized, such as the digital output of a CCD camera taking a photograph.

The source image (si) has a source image height (sih) and a source image width (siw). The source image aspect ratio (sir) is the width of the image divided by the height of the image, generally in inches:

$$\text{sir} = \text{siw}/\text{sih}$$

The viewing window (vw) is the window, defined in pixels, within which the target image, when scaled to fit, is to be displayed as the viewing image (vi). The viewing window (vw) has a viewing window width (vww) and a viewing window height (vwh), both defined in pixels. Thus, the viewing window aspect ratio (vwr) can be determined as:

$$\text{vwr} = \text{vww}/\text{vwh}$$

Note that the source image (si) may have a different aspect ratio than the viewing window (vw). To place the viewing image (vi) in the viewing window (vw), a subset of pixels from the source image (si) must be selected and scaled. The viewing image height (vih) and viewing image width (viw) within the viewing window (vw) can be determined by comparing the source image

aspect ratio (sir) to the viewing window aspect ratio (vwr), as shown:

if $sir < vwr$ then:

$$vih = vwh$$

5 $viw = vih * sir$

but if $sir \geq vwr$ then:

$$viw = vww$$

$$vih = viw / sir$$

This relationship is illustrated in FIG. 7.

10 Note that the target image (ti) is created from the source image (si), by scaling the image (si) down to fit within the viewing window (vw). When the target image (ti) is scaled down by the desired maximum magnification factor (mmf) to fit within the viewing window (vw), the scaled target image is called the viewing
15 image (vi).

The maximum magnification factor (mmf) is defined as the ratio of the target image area (tia) to the viewing image area (via). This ratio will determine the amount of zoom available without causing the image to distort due to pixelation, i.e., when fewer
20 pixels are in the viewing image being displayed than available in the viewing window. So:

$$\text{target image area (tia)} = tiw \times tih$$

and since

$$via = viw \times vih$$

25 then

$$tia = via \times mmf$$

To obtain the target image width and height:

$$tiw = \sqrt{tia * sir}$$

$$tih = tiw / sir$$

The relationship between the target image and the viewing image is shown in FIG. 7. The relationship between the target image and the viewing window is also shown. A zoom to the maximum level will be shown in the viewing window as illustrated at
 5 representation 120 of FIG. 7. By panning the viewing window, every portion of the target image may be viewed from each level of zooming.

To determine the minimum scan density (msd) to avoid pixelation at the desired maximum magnification factor (mmf):

10
$$\text{msd} = tih/sih. = t_{iw}/s_{iw}$$

EXAMPLE 1

Determine the Target Image Area and dimensions, and minimum scan density for the following case:

15 Source Image = 5" wide x 4" high
 Desired Magnification Factor = 20
 Source Image Aspect Ratio = 5 / 4 = 1.25

Define the Viewing Window: assume 480w x 320h pixels

Viewing Window Aspect Ratio = 480 / 320 = 1.5

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

20 1.25 < 1.5 therefore:

$$v_{ih} = v_{wh} = 320 \text{ pixels}$$

$$v_{iw} = v_{wh} * 1.25 = 320 * 1.25 = 400 \text{ pixels}$$

The Viewing Image Area = $v_{is} = 320 \times 400 = 128,000$ pixels

The Target Image Area = $v_{is} \times 20 = 128,000 \times 20 = 2,560,000$

25 pixels

$$\text{The Target Image width} = \sqrt{2,560,000 / 0.8} = 1789 \text{ pixels}$$

$$\text{The Target Image height} = 1789 \times 0.8 = 1431 \text{ pixels}$$

The Minimum Scan Density = $1789 / 5 = 358$ pixels per inch

The photo scan can be any scan density > 357 pixels per inch

Thus, a 5 x 4" print film image should be scanned at
 5 greater than 357 pixels per inch to allow magnification/zoom up to
 20 times in a viewing window of 480×320 pixels. An enhanced
 digital image file having 2,560,000 pixels provides a sufficient
 number of pixels for this example.

EXAMPLE 2

10 Determine the Target Image Area and dimensions, and minimum scan
 density for the following case:

Source Image = 5" x 4" *wide high*

Desired Maximum Magnification Factor = 20

Source Image Aspect Ratio = $5 / 4 = 1.25$

15 Define the Viewing Window: assume 400w x 360h pixels

Viewing Window Aspect Ratio = $400 / 360 = 1.11$

The Source Image Aspect Ratio is $>$ the Viewing Window Aspect Ratio:

$1.25 > 1.11$ therefore:

$v_{iw} = v_{ww} = 400$ pixels

20 $v_{ih} = v_{iw} / 1.25 = 400 / 1.25 = 320$ pixels

The Viewing Image Area = $v_{ia} = 400 \times 320 = 128,000$ pixels

The Target Image Area = $v_{ia} \times 20 = 128,000 \times 20 = 2,560,000$ pixels

The Target Image width = $\sqrt{2,560,000 * 1.25} = 1789$ pixels

The Target Image height = $1789 / 1.25 = 1431$ pixels

25 The Minimum Scan Density = $1431 / 4 = 358$ pixels per inch

The photo scan can be any scan density > 357 pixels per inch

EXAMPLE 3

Determine the Target Image Area and dimensions, and minimum scan density for the following case:

Source Image = 4" wide x 5" high (portrait orientation)

Desired Magnification Factor = 20

5 Source Image Aspect Ratio = $4 / 5 = 0.8$

Define the Viewing Window: assume 400w x 360w pixels

Viewing Window Aspect Ratio = $400 / 360 = 1.11$

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

$0.8 < 1.11$ therefore:

10 $v_{ih} = v_{wh} = 360$ pixels

$v_{iw} = v_{ih} * 0.8 = 360 * 0.8 = 288$ pixels

The Viewing Image area = $v_{ia} = 360 * 288 = 103,680$ pixels

The Target Image area = $v_{ia} * 20 = 103,680 * 20 = 2,073,600$ pixels

The Target Image width = $\sqrt{2,073,600 * 0.8} = 1288$ pixels

15 The Target Image height = $1288 / 0.8 = 1610$ pixels

The Minimum Scan Density = $1610 / 5 = 322$ pixels per inch

The photo scan can be any scan density > 321 pixels per inch

Returning now to FIG. 2, at step 60, the enhanced digital image file is provided to computer 22 in a digitized format, i.e., pixel-based, bitmapped, etc. (as opposed to vector graphics based format), such as in either in a bitmap BMP format or a compressed JPEG format. Computer 22 performs a touch-up operation on the scanned image in order to make refinements or enhancements thereto. This touch-up operation is accomplished by utilizing imaging software. Touch-up steps may include cleaning the edges of the image, adjusting lighting, adjusting colors, etc. Adobe PhotoShop software, manufactured by Adobe Systems Inc., San Jose, California, can be used as the imaging software for touching up the images.

20

25

According to one example, multiple images can be stitched together after scanning, and before or after compression, thereby creating a panoramic scene or image, or simply a scene requiring a plurality of photographs. This stitching operation can be performed by utilizing photo stitching software such as, for example, Photo Vista software by Live Picture, Live Picture Reality Studio or Live Picture Object Modeler. Stitching may comprise sufficient photos for a 360 degree panoramic image of a scene. If images are stitched, they may be touched-up at step 60.

At step 62, if desired, and if the enhanced digital image file has not yet been compressed (e.g., by scanning device 18 or the touch-up software), the image is then converted from a bitmap file format (e.g., BMP) to a compressed file format (e.g., JPEG). Other compression algorithms are contemplated. Adobe Image Ready software is utilized to perform the BMP-to-JPEG file conversion in this exemplary embodiment. The compression is set to a very high compression factor, such as, 70% to 90%, but may alternatively be set to other compression factors. The target image area be set as one of the parameters for compression, thus ensuring an optimum compressed file size.

At step 64, user interface or control data is associated with the enhanced digital image file. The user interface data is a program or code segment (e.g., a Java applet) that provides a graphic user interface on display 30 upon loading of the image. The user interface program is associated with the enhanced digital image file such that the combined file or files can automatically launch the graphic user interface, decompress the digital image data, and display at least a portion of the digital image data within a viewing window having a predetermined viewing size on display 30.

The user interface data may alternatively be a plug-in, applet, or other software program, such as, Photo Vista, Reality Studio, or Object Modeler manufactured by Live Picture Inc., San Francisco, California, or an IPIX plug-in manufactured by Internet Pictures Corporation of Oak Ridge, Tennessee. The user interface data may be either associated with the enhanced digital image file such that it is downloaded with the enhanced digital image data, or it may be launched independently from the enhanced digital image data as, for example, an applet or plug-in on user computer 28. If the user interface data is launched independently of the image data, it may either be first opened by the user before downloading the enhanced digital image file, or it may be automatically opened by the enhanced digital image file, such as, via a script or other code segment within the enhanced digital image file.

Referring to FIG. 3, an exemplary screen print 80 from display 30 is shown illustrating the graphical user interface 82 generated by the user interface program. User interface 82 includes a viewing window or frame 84 for displaying the digital image data 86. User interface 82 further includes zoom buttons 88 for allowing the user to zoom into and out of digital image data 86. By actuating one of zoom buttons 88, user interface program resizes digital image data 86 within viewing frame 84. User interface 82 further includes panning buttons 90 to allow the user to pan up, down, left, and right within image data 86.

Once the user interface program is associated with the enhanced digital image data, the resulting image is ready for providing to a network server, projection from a projector, display system, posting, or playback, to or from a host computer, a Web server, a Web site, or a Web page. At step 66, the enhanced digital

image is uploaded to a network server. In the instance where the enhanced digital image is posted to an Internet Web server, the upload from computer 22 to the respective server can be performed by utilizing file uploading software, such as, Web FTP (file transfer protocol) Pro software, manufactured by Ipswitch, Inc., Lexington, Massachusetts.

Referring now to FIGS. 3, 4, and 5, exemplary print screens are shown illustrating the result of an upload or download of the enhanced digital image file to user computer 28 for display on display 30. In FIG. 3, digital image data 86 of a collectible stamp image is shown within a viewing window 84. Although viewing window 84 is slightly smaller than the full-screen size of display 30 (e.g., 640 x 480 pixels in this example), viewing window 84 can alternatively be configured for full-screen display, or display in other sizes or resolutions. As shown, digital image data 86 shows no sign of pixelation.

In FIG. 4, a user has actuated zoom buttons 88 to zoom-in to the digital image. In response, the user interface program provides additional digital image data from the enhanced digital image file stored in a memory (e.g., a hard drive) of user computer 28, to provide a zoomed view of the digital image. Thus, the view of FIG. 4 also shows little sign of pixelation even though the image has been magnified many times.

In FIG. 5, a user has actuated pan buttons 90 to display the lower left-hand corner of the digital image data within viewing window 84. The user has also actuated zoom buttons 88 to zoom-in to the digital image data. Again, little pixelation is visible.

As mentioned, the principles described herein are also operable with a digital image taken by a digital camera. Referring

now to FIG. 6, a method 100 of providing an enhanced digital image file utilizing a digital camera is shown. At step 102, the digital camera is configured to acquire a digital image. In this step, the camera is set with a high resolution to acquire at least enough pixels
 5 for a magnification of two times the size of the viewing window provided on display 30, though higher numbers of pixel data may also be acquired.

Again referring to FIG. 7 and the corresponding description hereinabove, with a digital source image, the maximum magnification
 10 factor (mmf) should not produce a target image larger than the source image in pixels because of the pixel distortion or pixelation effect, i.e., distortion due to fewer pixels in the image being displayed than available in the viewing window. Since:

$$\text{target image area (tia)} = \text{tiw} \times \text{tih} = \text{via} \times \text{mmf}$$

15 then to obtain the target image width and height:

$$\text{tiw} = \text{tia} \times \text{sir}$$

$$\text{tih} = \text{tiw} / \text{sir}$$

If $\text{tih} > \text{sih}$ then set $\text{tih} = \text{sih}$ and $\text{tiw} = \text{siw}$

EXAMPLE 4

20 Determine the Target Image size and dimensions, and minimum scan density for the following case:

Source Image = 1600 x 1200 pixels

Desired Magnification Factor = 20

Source Image Aspect Ratio = $1600 / 1200 = 1.33$

25 Define the Viewing Window: assume 480w x 360h pixels

Viewing Window Aspect Ratio = $480 / 360 = 1.33$

The Source Image Aspect Ratio is = the Viewing Window Aspect Ratio:

$$\frac{1.33}{1.33} = \frac{1.33}{1.33} \text{ therefore:}$$

$$\text{vih} = \text{vwh} = 360 \text{ pixels}$$

$$v_{iw} = v_{ih} * 1.33 = 360 * 1.33 = 480 \text{ pixels}$$

The Viewing Image area = $v_{ia} = 480 \times 360 = 172,800$ pixels

The Target Image area = $v_{ia} \times 20 = 172,800 \times 20 = 3,456,000$ pixels

The Target Image width = $\sqrt{3,456,000 * 1.33} = 2147$ pixels

5 The Target Image height = $2147 / 1.33 = 1610$ pixels

But t_{ih} of 1610 pixels is > 1200 pixels therefore:

$$t_{ih} = 1200 \text{ pixels}$$

$$t_{iw} = 1600 \text{ pixels}$$

$$t_{ia} = 1200 \times 1600 = 1,920,000 \text{ pixels}$$

10 Effective Maximum Magnification Factor = t_{ia} / v_{ia}

$$= 1,920,000 / 172,800 = 11.1$$

The Minimum Scan Density = N/A

Steps 104 (touch-up image), 106 (compress file), 108
 (associate user interface data), and 110 (upload file) may proceed as
 15 described with reference to FIG. 2 in the print film image exemplary
 method.

The above method can be repeated using different
 depth images or digital photographs for the images in order to create
 areas of higher resolution or "hot spots" within an image for detailed
 20 close-up inspection or viewing. These depth images can be linked to
 the respective image or image segment. The above method can be
 utilized in order to create higher zoom capabilities with each new
 depth layer of an image.

The above method can be utilized for applications
 25 including single images, single panoramic images, stitched images,
 non-stitched images or any other suitable image type.

The system and method of the present invention can
 also be utilized in conjunction with three-dimensional images in order
 to produce high resolution, three-dimensional digital images and 3-D
 30 texturings.

The resulting images which are obtained via the exemplary system and method are characterized by a high definition resolution and are suitable for high definition television, Web television, and large, panoramic or object models, Internet applications, which preserve resolution upon image magnification or reduction. The exemplary embodiment also dispenses with the need for plug-in software during download or file transfer operations.

EXAMPLE 5

A variety of photographs were taken using several different types of cameras. A digital camera was used to take several digital images. A Hasselblad camera was used to take several print film images, some of which were 2 ¼" square and others of which were 4 x 5" square. The print film images were taken to a film developing center to be enlarged to 8 x 12" pictures.

The enlarged pictures were scanned with UMAX Astra scanner using Adobe Photo Editor. Some bitmap files were created and some JPEG files were created. In spite of conventional teaching to the contrary, the scanner was set for a high resolution: 600 dpi. For the JPEG files, compression was set to 30:1.

Some of the images were stitched together using Photo Vista. The stitched images were then compressed at a high ratio of compression to generate JPEG files. The compressed files were touched up using Adobe Photo Editor and then uploaded to an Internet server. The uploaded files were then downloaded from the Internet server. The download took only a short time. The images were observed to have exceptionally high quality.

In review, a method is disclosed of providing a digital image file for viewing in a viewing window of a user display, the

viewing window having a predetermined size. The method includes providing a digital image having an image size comprising a fixed number of pixels representative of an image, the image size being greater than the predetermined viewing window size. The digital
5 image file is associated with a user interface that is configured to display the digital image in the viewing window and to allow a user to zoom into and pan around in the image displayed in the viewing window while maintaining high image quality.

While the exemplary embodiments illustrated in the
10 FIGS. and described above are presently preferred, it should be understood that these embodiments are offered by way of example only. For example, the specific pixel counts and display sizes disclosed herein are merely exemplary and are used to illustrate the pertinent principles. Also, not all of the steps of the exemplary
15 embodiments need be performed in all embodiments, nor need they be performed in the specific order recited. Accordingly, the present invention is not limited to a particular embodiment, but extends to various modifications that nevertheless fall within the scope of the appended claims.

20

WHAT IS CLAIMED IS:

1 1. A method of providing a digital image file for viewing on
2 a user display in a viewing window having a predetermined size, the
3 method comprising:

4 providing a digital image file having an image size
5 comprising a fixed number of pixels representative of an image,
6 wherein the image size is greater than that of the predetermined
7 viewing window size.

8 2. The method of claim 1, further comprising providing a
9 user interface for the digital image file, the user interface configured
10 to display the digital image file in the viewing window and to allow a
11 user to zoom into the image displayed in the viewing window,

12 3. The method of claim 1, wherein the image size is at
13 least ten times that of the predetermined viewing window size.

1 4. The method of claim 1, wherein the user interface is
2 configured to allow the user to pan across the image.

1 5. The method of claim 1, wherein the user interface
2 prevents the user from zooming into the image to the point of
3 pixelation.

1 6. The method of claim 1, wherein the digital image file
2 includes the user interface in a single data file.

1 7. The method of claim 1, wherein the user interface is an
2 application program applet.

1 8. The method of claim 1, wherein the user interface is an
2 application program controlled by the user's computer.

1 9. The method of claim 1, further comprising compressing
2 the digital image file.

1 10. The method of claim 1, further comprising uploading
2 the digital image file to a network server.

1 11. The method of claim 1, wherein the digital image file is
2 generated from a print film image.

1 12. The method of claim 1, wherein the digital image file is
2 acquired with a digital camera.

1 13. The method of claim 1, wherein the predetermined size
2 represents a full-screen size of the user display.

1 14. A method of providing an enhanced digitized image file
2 to a user, comprising:
3 providing a viewing window size in which the digitized
4 image file is to be displayed to a user;
5 providing a digitized image file having an image size
6 greater than that of the predefined viewing window size;
7 compressing the digitized image file; and
8 providing the compressed image file to a network
9 server.

1 15. The method of claim 13, further comprising:
2 under user control, transmitting the compressed image
3 file over the network;
4 displaying the transmitted image file to the user in a
5 viewing window having the predefined viewing window size; and
6 under user control, magnifying the displayed image
7 within the viewing window.

1 16. The method of claim 14, further comprising, under user
2 control, moving the displayed image in the predefined viewing
3 window size.

1 17. The method of claim 14, further comprising providing
2 the user with a plurality of selectable magnification levels to view
3 the displayed image within the viewing window.

1 18. The method of claim 14, wherein the resolution of the
2 digitized image is greater than that of the image displayed to the
3 user in the predefined viewing window size without image
4 magnification.

1 19. The method of claim 16, wherein the selectable
2 magnification levels are limited such that no more than one pixel of
3 the user display can display one pixel of the digitized image.

1 20. The method of claim 13, wherein the digitized image
2 file is compressed to a JPEG format.

1 21. The method of claim 13, wherein the step of generating
2 includes enlarging and scanning a print film image to provide the
3 digitized image file.

1 22. The method of claim 19, wherein the print film image is
2 scanned with a density of at least 100 dots per inch.

1 23. The method of claim 13, wherein the step of generating
2 includes acquiring the digitized image file with a digital camera.

1 24. The method of claim 13, wherein the compressed
2 image file is accessible via the Internet.

1 25. The method of claim 14, wherein magnifying the
2 displayed image does not degrade the image quality.

1 26. An enhanced digital image file downloadable to a client
2 computer having a viewing window on a display, the viewing
3 window having a predetermined frame size, the digital image file
4 comprising:

5 digitized image data representative of an image,
6 wherein the digitized image data has a number of pixels sufficient to
7 allow a user to magnify the digitized image in the viewing window
8 by a magnification factor of at least two without pixelation; and
9 control data to allow the user to control the
10 magnification factor.

11 27. The enhanced digital image file of claim 25, wherein the
12 digitized image data is compressed.

1 28. The enhanced digital image file of claim 25, wherein the
2 control data is configured to provide zoom buttons and pan buttons
3 to a user.

1 29. The enhanced digital image file of claim 27, wherein the
2 control data includes a Java applet.

1 30. The enhanced digital image file of claim 25, wherein the
2 digitized image data has a number of pixels sufficient to allow a user
3 to magnify the digitized image in the viewing window by a
4 magnification factor of at least ten without pixelation.

1 31. The enhanced digital image file of claim 25, wherein the
2 digitized image data has a number of pixels sufficient to allow a user
3 to magnify the digitized image in the viewing window by a
4 magnification factor of at least one hundred without pixelation.

1 32. The enhanced digital image file of claim 25, wherein the
2 control data is configured to prevent the user from magnifying the
3 digitized image to the point of pixelation.

ABSTRACT OF THE DISCLOSURE

A method of providing a digital image file for viewing in a viewing window of a user display, the viewing window having a predetermined size. The method includes providing a digital image having an image size comprising a fixed number of pixels representative of an image, the image size being greater than the predetermined viewing window size. The digital image file is associated with a user interface that is configured to display the digital image in the viewing window and to allow a user to zoom into and pan around in the image displayed in the viewing window while maintaining high image quality.

**ZOOM AND PAN IMAGING
USING A DIGITAL CAMERA**

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is related to U.S. Patent Application No. 09/630,939, filed August 2, 2000, a copy of which is attached hereto and incorporated herein by reference.

5 **FIELD OF THE INVENTION**

The present invention is directed to a system and a method for producing enhanced digital images and, in particular, to a system and a method for producing enhanced digital images having improved resolution for zooming and/or panning within an image
10 downloaded from a digital camera to an external display system such as to a computer display or directly to a monitor.

BACKGROUND OF THE INVENTION

See attached information regarding digital cameras which is incorporated herein by reference.

15 See Background in related application.

DESCRIPTION OF THE INVENTION

The object of this invention is to enable a digital camera to provide pan and zoom capabilities to the digital pictures taken by the camera. The pictures may be viewed, either on the camera
20 through the viewing screen usually provided, or through a display attached to a computer which has received a file comprising the digital images taken by the digital camera, or through any other display system such as a television or monitor.

See attached Figure A1.

There are several embodiments:

In one embodiment, the software for viewing the images in pan and zoom mode is contained within the camera #1.

5 The photographer selects the image to be displayed on the viewing screen #2 and then selects the pan and zoom mode by use of control buttons which may be existing buttons multiplexed for this purpose. The necessary controls are: pan left, right, up, down, zoom in, zoom out. Including the pan and zoom facility in the
10 camera enables the close inspection of particular features of the image thereby ensuring that the image is meeting the objectives of the photographer.

In another embodiment, the digital file containing the images is transferred to the computer #10 through a cable
15 connection connecting the USB port #3 to USB port #11 or equivalent ports such as a serial port. Alternatively the digital file may be transferred by means of a media device such as a floppy disc or flash card. In this latter case, the file is written onto the media device using data media port #4 and read into the computer using
20 data media port #12. The computer #10 should have already been loaded with user interface software which provides the controls for displaying the digital images on computer display #20 and also for providing the pan and zoom feature controls.

An alternative embodiment is to include into the digital
25 file transferred from the camera #1 to the computer #10 the user interface software necessary to control the display and zoom and pan of the digital images in the computer. In this way no software is necessary to be pre-loaded into the computer #10.

Another alternative embodiment is to pre-load some software into computer #10 and load the remainder from the camera #1 through the digital file containing the images being transferred.

Note that the relationship between the target image and the viewing image is very important, as described in the related application. By panning the viewing window, every portion of the target image may be viewed from each level of zooming. Zoom capability is provided up to a maximum level where the image begins to pixelate.

In the related application, user interface or control data is associated with the enhanced digital image file. The user interface data is a program or code segment (e.g., a Java applet) that provides a graphic user interface on the display upon loading of the image.

In one embodiment of the present invention, the user interface program is associated with the digital image file in the camera and downloaded with the file or files so the computer or other display system can automatically launch the graphic user interface, decompress the digital image data if necessary, and display at least a portion of the digital image data within a viewing window having a predetermined viewing size. The user interface program can be written in C+ or C++ or other common languages. The user interface data may alternatively be a plug-in, applet, or other software program.

The user interface data may be either associated with the enhanced digital image file such that it is downloaded with the enhanced digital image data, or it may be launched independently from the enhanced digital image data as, for example, an applet or plug-in on computer #10. If the user interface data is launched independently of the image data, it may either be first opened by the

user before downloading the enhanced digital image file, or it may be automatically opened by the enhanced digital image file, such as, via a script or other code segment within the enhanced digital image file.

5 The user interface includes a viewing window or frame for displaying the digital image data, and further includes zoom and pan functions as described in the related application.

Note that the amount of zoom capability provided by the user interface will vary depending upon the display size and resolution. Nevertheless, the zoom capability should reach a maximum when the image begins to pixelate as defined in the related application.

For example, if the original image is 1500 (width) x 1200 (height) pixels, and the camera viewfinder display has a 256 x 180 screen size, then the image can be magnified to 39 times, whereas the same image can only be magnified to 3.75 times in an 800 x 600 computer monitor. In either case, at the maximum zoom, the zoomed portion of the original image will be fully detailed pixel-for-pixel.

15 If the digital image file, including the user interface program, is provided directly to a television or monitor that does not have zoom or pan controls or buttons, the controls or buttons on the camera will be used.

As mentioned in the related application, the digital camera is typically set with a high resolution to acquire at least enough pixels for a magnification of two times the size of the viewing window provided on the display, though higher numbers of pixel data may also be acquired. The same or related mathematical formulas for determining the maximum magnification factor (mmf) in the related application apply in the preferred embodiment.

Note in the preferred embodiment that the display is viewing all or a portion of the entire image that was downloaded to the computer #10, and not downloading portions "on the fly" as they are needed.

5 In the preferred embodiment, the image can be panned while zoomed in to the maximum.

PAN AND ZOOM IMAGING USING A DIGITAL CAMERA

OLYMPUS

Olympus C-3030

Olympus extends their popular high-end compact to 3.3 megapixels, adds sound to its movies!

(Review first posted 5/10/2000)

- *3.14 megapixel resolution (3.34 megapixel CCD) for 2048 x 1536 images
- *Multiple exposure modes, including full manual
- *Total of 5 resolution modes, with uncompressed TIFF format available in all
- *Optional manual focus with distance readout on LCD screen
- *Sync connection for external flash unit
- *Movie recording with sound, up to 300 seconds in SQ (160x120) mode

Manufacturer Overview

With one of the broadest digicam lineups in the industry, Olympus is a traditional camera manufacturer who's successfully making the transition to the digital era. A little over a year ago (this is being written in May, 2000) they introduced one of the first 2 megapixel digicams on the market, the C-2000 Zoom. It proved to be extremely popular, offering a compelling combination of features and excellent picture quality. They subsequently upgrade it with the C-2020 Zoom, a model offering improved functionality and user interface design. Now, they've extended the same basic (and successful) design to the three megapixel arena, with the C-3030 Zoom. The new model is again evolutionary, rather than revolutionary, but once again, Olympus appears to have listened to customer input and incorporated many of the most-requested features. Overall, the new camera is a very strong entry in the three megapixel arena, and should compete well in that market.

Highlights

- 3.34 megapixel (3.14 effective), 1/2 inch CCD delivering up to 2048 x 1536 pixel images.
- 1.8 inch, TFT color LCD display.

- 3x, 6.5 to 19.5mm lens (equivalent to a 32 to 96mm lens on a 35mm camera) with auto and manual focus.
- 2.5x digital telephoto.
- Apertures from F/2.8 to F/11.
- Shutter speed from 1 to 1/800 seconds in Auto exposure mode (16 to 1/800 in Manual).
- Variable ISO settings of Auto, 100, 200 or 400.
- Exposure compensation from -2 to +2 in 1/3 EV increments.
- Adjustable white balance with Auto, Clear, Cloudy, Tungsten and Fluorescent settings.
- Digital ESP (matrix) and Spot metering options.
- Program AE, Aperture Priority, Shutter Priority and Manual exposure modes.
- Movie recording mode with sound and shutter speeds from 1/30 to 1/10,000 seconds.
- Continuous Shooting, Auto-Bracketing, Black & White, Sepia and other special exposure modes.
- Built-in flash with Auto, Red-Eye Reduction, Fill-In, Off and Slow-Sync modes.
- External flash PC sync.
- 12 second self-timer with remote control.
- JPEG, uncompressed TIFF, Wave and QuickTime Motion JPEG file formats.
- Image capture on SmartMedia.
- USB and serial computer connections.
- Direct print capabilities with optional Olympus printer.

Executive Overview

A few months ago (early 2000), Olympus introduced the C2020 as a welcome upgrade to their previous C-2000 Zoom digicam: Olympus obviously listened closely to users, and implemented many of the most-requested features in the new model. Now, they've taken the same basic (successful) design and created the C-3030, giving it a larger, 3.3 megapixel CCD, sound recording capabilities and several other feature additions and user-interface improvements. The net result is very pleasing, certain to appeal to fans of the former models, or to anyone looking for a high-performance "prosumer" digicam. Design-wise, the C-3030 looks much like its predecessor, with the exception of its monotone black body (the C-2020 featured a silver and black design). The C-3030 retains the lightweight portability of its predecessor, easily slipping into a large coat pocket or purse. The only design complaint we have is the lens cap, which doesn't tether to anything and can be easily lost. It's a minor issue, but one we're compelled to harp on just the same: We've lost too many lens caps in our lives, and a tether strap is just too easy to add for manufacturers to have an excuse not to. On the plus side, we were glad to see that Olympus redesigned the previously awkward battery compartment cover. Now, you just slide a lock and then slide the cover open, without needing superhuman hand strength or more fingers than nature gave us.

The C-3030 offers a 3x, 6.5 to 19.5mm lens (equivalent to a 32 to 96mm lens on a 35mm camera) with both auto and manual focus options. This looks like it's physically the same lens as on the C-2020 Zoom, with the difference in focal length resulting from the slightly larger physical dimensions of the CCD. We were very happy to see the continuance of the distance scale that appears on the LCD when using manual focus, as it greatly helps in hard to focus situations. There's now also a handy focus-assist feature, whereby the LCD display zooms to a larger scale whenever you actuate the manual focus adjustment. Apart from the temporary "zoom" while focusing, the 2.5x digital telephoto is activated through the Record menu, preventing you from accidentally sliding into the digital zoom range, a feature we like to see. The C-3030 sports both optical and LCD viewfinders for composing images. As with its

predecessors, power consumption is exceptionally low when the LCD is off, meaning you can leave the camera on all day without worrying about draining your batteries.

Exposure-wise, we appreciate the degree of control the C-3030 provides. Although many of the camera's settings rely on the LCD menu system, you can still set the flash, macro and metering options without resorting to the LCD. Unfortunately, changing the exposure compensation or altering other exposure settings requires accessing the LCD menu system. (In general, we prefer to see digicams that permit significant control via the top-panel data readout, rather than the LCD panel. This really helps to conserve battery power!) However, in Playback mode, functions like Delete, Write Protect and Print can now be controlled by pressing a single button (previously requiring use of the menu system). You get as much or as little exposure control as you want with the C-3030, via Program AE, Aperture Priority, Shutter Priority and Manual exposure modes. In all modes except for manual, you have an aperture range from F/2.8 to F/11 and shutter speeds from one to 1/800 seconds. In Manual mode, the shutter speed range extends to 16 to 1/800 seconds, giving you much longer exposure times. We liked the fact that, in all modes except Program AE, the camera indicates whether an exposure is going to be too dark or too light, giving you a chance to alter the exposure settings before snapping the picture. We also really like the on-screen display of the aperture and shutter speeds the camera has chosen.

White balance and exposure compensation offer the traditional settings and you have a choice between Spot and Digital ESP (matrix) exposure metering. Thus far, Olympus digicams haven't offered a "manual" white balance mode, and the C-3030 doesn't either. We really like to see manual white-balance options (also called "preset" or "one-push" white balance by some manufacturers), especially on cameras as advanced as the C-3030 Zoom. The built-in flash provides the standard Auto, Red-Eye Reduction, Fill-In and Off modes, but can be also combined with slow shutter speeds to achieve various low light exposures through the Slow-Sync setting. In slow sync mode, the flash may be synchronized with either the opening or closing of the shutter. There's also a sync socket for an external flash, which can be used either with or without the built-in flash. You can control flash exposure independently of that for ambient light, via the flash intensity setting, which is adjustable from -2 to +2 in 1/3 EV increments. Combine this with the variable ISO option (100, 200 or 400) and you get an excellent range of exposure control options, especially in low-light situations.

The Sequence, Auto Bracketing and Panorama shooting modes provide a nice range of exposure options and cater to a number of shooting situations. We also like the Picture Effects menu, which offers Black and White, Sepia, White Board or Black Board shooting modes, helpful in a variety of scenarios. A nice bonus on the C-3030 is the ability to record sound, both with movies and still images. This makes movies a little more interesting and can be really helpful in labeling still images. (The lack of sound recording in its movies was a frequent complaint we heard from owners of the earlier C-2020.) Do note though, that the C-3030 Zoom has no internal speaker, so you'll have to download your movies to a computer to hear the audio track.

The C-3030 offers a range of image resolution sizes, from 2048 x 1536 to 640 x 480 (five sizes in all) with a variety of quality settings. Files are saved as JPEGs with an option for uncompressed TIFF at all image sizes. Images are stored on SmartMedia cards and an 16mb card is packaged with the camera. The C-3030 supports both USB and the standard serial interface, accommodating both PC and Mac users. Additionally, an NTSC video cable means that you can play back movies and captured images on your television set, or even use the TV as an expanded LCD monitor for image composition. (European models come equipped for the PAL video standard.)

Overall, the C-3030 Zoom is a very worthy extension to the previous C-2020 Zoom: Combining lightweight portability, a 3.3 megapixel CCD, wide array of resolution choices, and excellent exposure controls, it's flexible, user-friendly, and high performance. We own a C-2020 Zoom and use it for all our product shots that appear on the web site: We have to confess to being sorely tempted by the new 3 megapixel C-3030 Zoom, even though our C-2020 is less than six months old. (This is an occupational hazard in the digicam world, where there's **always** something coming out better than the product you acquired just months before...) Whether you're entering the market for the first time, or upgrading from an earlier model though, the C-3030 Zoom presents a wealth of features and capabilities, and excellent

image quality in the bargain.

Design

With the C-3030 Zoom, Olympus has kept the familiar lightweight, compact styling of earlier models in the line, but this time with an all black facade. In fact, it incorporates all the features of the C-2020 Zoom, but now with a 3.3 megapixel CCD and sound recording capability (not to mention a wider array of image resolution sizes). The very rugged plastic body gives the camera a low weight of 10.6 ounces (300.5g). Dimension-wise, the camera measures 4.3 x 3.0 x 2.6 inches (107.5 x 76.4 x 66.4mm), so it's easily stashed in a coat pocket or purse. Overall, the design is almost identical to the C-2020 Zoom, with the sole exceptions of a larger handgrip area and a much easier to operate battery compartment lid.

Aside from the monotone body, the C-3030 doesn't look too different from the previous C-2020. The front of the camera is relatively clean, featuring the telescoping lens, built-in flash, optical viewfinder front and the remote control infrared sensor. When fully retracted, the lens only adds about a quarter of an inch protrusion beyond the handgrip to the front of the camera. When the camera is turned on, the lens comes out of hiding and likewise retracts when the camera is switched off. A minor gripe here is that the lens is protected by a removable lens cap that doesn't have a tether or any place to attach one. While this isn't a big deal, lens caps have a habit of disappearing, so we like to see designs that either omit them, or provide some sort of tether.

We're glad to see the continuance of the hefty handgrip on the side of the camera which holds the SmartMedia slot (beneath a snug plastic cover that snaps tightly into place). As noted above, the handgrip on the C-3030 Zoom is a little larger than that on the earlier 2020, making for a bit more secure grip.

On the opposite side of the camera are the digital, AC and video input jacks, also protected by a snug plastic cover. The dioptic adjustment dial for the optical viewfinder and the external flash sync connector (notably, not a standard "PC" sync connector) are also on this side of the camera. Users will want to be careful with the flash sync cover, as it's tiny and can be easily lost.

Up top is a small information display panel, the mode dial, shutter release button and zoom control. The small information display reports many of the camera's exposure settings, but you still need to rely on the LCD for exposure compensation adjustments, aperture, and shutter settings. (Note to Olympus: Black & White readouts are cheap, both in terms of materials cost and battery power: We'd really like to see you make more use of them for routine operating controls!)

Most of the controls are on the back panel of the camera with the LCD monitor in the center. The flash and macro controls, arrow keys, manual focus, display and menu buttons live back here. There's also a small, red LED on the side closest to the SmartMedia slot that lets you know when the card is in use (and therefore not to open the slot).

Both the locking battery compartment and plastic tripod mount are located on the bottom of the camera. Unfortunately, they are too close to each other to allow quick battery changes when the camera is mounted on a tripod. Frankly though, we don't know how Olympus could have gotten around that problem on this model, as the bottom of the camera body isn't wide enough to allow any leeway in this area and at the same time keep the tripod mount centrally located. We are glad to report that the battery compartment is now **much** easier to open than the previous design, as you just slide the lock and push the compartment door outwards as it flips open. (The previous model really required both hands to get it open without dropping the camera). A minor quibble on this part of the camera: The C-3030 Zoom uses a plastic tripod socket, albeit a replaceable one. Metal tripod sockets are the exception rather than the rule, but we really like the added durability that metal provides. Accordingly, we try to mention the tripod socket material in our reviews, as an encouragement to digicam makers to use metal more frequently.

We're also glad to see the return of the small infrared remote control which lets you trip the shutter, operate the zoom lens and scroll through recorded images in Playback mode. We really enjoyed this feature and the amount of freedom it gives. (We make continual use of the IR remote on our C-2020 Zoom in all our studio shooting: It's incredibly handy!)

The tiny IR remote provides an amazing level of control without a "tether" connection.

Viewfinder

The C-3030 features both a "real image" optical viewfinder and an LCD monitor for image composition. The optical viewfinder has central autofocus crosshairs to help you line up shots and two small external LEDs that report whether or not the focus and/or flash is ready. There's also a small dioptic adjustment dial on the left side of the optical viewfinder, to assist eyeglass wearers, but the eyepoint is a bit lower than we'd like to see for use with glasses. The viewfinder zooms along with the lens, but

naturally doesn't respond to the 2.5x digital telephoto, which is dependent on the LCD monitor.

A 1.8 inch, TFT, color LCD monitor provides detailed feedback about the current exposure settings, showing the currently selected f-stop, shutter speed and exposure compensation in a row of numbers across the top. In Aperture and Shutter Priority modes, the aperture or shutter value appears continuously, along with the exposure compensation setting, while the second, automatically determined exposure value (either shutter speed or f-stop) appears whenever the shutter button is half pressed, triggering the autofocus and autoexposure systems. The same goes for Manual mode, except both values are displayed together. When the LCD monitor is turned on in record mode, some of the camera's exposure settings are listed as well, such as flash, exposure, etc.

When using the LCD monitor to review captured images, you can actually zoom in on displayed images up to 3x, as shown in the screen shot at right. This is very handy for checking focus, small details or precise framing. When you're zoomed in, the jog dial buttons let you scroll around within the larger image. There's also the index display option, which displays either four, nine or 16 images at a time.

We found the C-3030's optical viewfinder to be a little tight, showing approximately 82 percent frame coverage at wide angle and about 81 percent at telephoto. (Note that we've changed our nomenclature on this to better reflect what you see looking into the viewfinder: We previously would have referred to the C-3030's viewfinder as "loose"...). These numbers are from the 2048 x 1536 resolution size but the smaller 640 x 480 resolution size numbers are similar at 83 percent accuracy for both wide angle and telephoto. We also noticed that the framing here slants just a little to the left vertically, possibly the CCD on our test unit was shifted a little. The LCD monitor proved to be much more accurate, showing about 97 percent frame coverage at wide angle and slightly over 100 percent at the telephoto setting. (The covered area at the telephoto end is just barely inside the darker lines we use to frame the viewfinder accuracy target). As with the optical viewfinder, the smaller, 640 x 480 image sizes weren't too far off from the larger ones (about 96 percent coverage at wide angle and just over 100 percent accuracy at telephoto). We generally like to see the LCD monitor as close to 100 percent accuracy as possible, so the C-3030 does a very good job in that respect. We also shot at the 2x digital telephoto setting (our studio isn't long enough to accommodate the full 2.5x), which probably would have produced close to 100 percent accuracy if framed properly. One problem with the digital telephoto is that framing is difficult because of the softer, slightly distorted image on the LCD. Additionally, the resulting image is somewhat soft, which is a usual side effect of the digital zoom.

Optics

The C-3030 Zoom comes with a 3x, 6.5 to 19.5mm, all glass aspheric lens (equivalent to a 32 to 96mm lens on a 35mm camera) with eight elements in six groups. This appears to be physically the same lens as in the C-2020 Zoom, with the wider-angle coverage being due to the larger size of the 3030's CCD sensor. Further evidence of the tight fit between lens and CCD is the set of small notches cut into the bezel around the lens' front element, to avoid vignetting in the corners of the final images. Despite the cutouts in the lens bezel though, we did notice a slight vignetting (darkness in the corners of the images) when the lens was set to its widest angle. This disappeared fairly quickly as we zoomed toward telephoto settings, but was noticeable in shots of flat-tinted subjects at full wide angle zoom settings. (We confess to being puzzled though, by the smaller f/2.8 maximum aperture of the 3030's lens, compared to the f/2.0 of the 2020.) Apertures can be manually adjusted in both Manual and Aperture Priority mode from F/2.8 to F/11, in 1/3 f-stop increments. The contrast-detect TTL autofocus system covers a range from 31 inches (0.8 m) to infinity in normal mode and from eight to 31 inches (0.2 to 0.8 m) in macro. The green LED next to the optical viewfinder lights solid when the autofocus system achieves a lock on the subject. Low light focusing performance is fairly good, with the camera able to achieve focus down to about 1 footcandle (11 lux, or about the brightness level of a well-lit nighttime

street scene). Below that level, you'll need to resort to manual focusing.

A manual focus option is available by simply pressing the MF button on the back panel which displays a small distance readout to help you gauge distance (in meters or feet). The screen shot at right shows the focusing scale in manual focus mode. The up and down arrow buttons adjust the focus along the scale and pressing the MF (or OK) button again cancels the mode. We liked the fact that the distance scale displayed is split into two segments, one ranging from 2.6 feet to infinity, the other from 8 to 31 inches. This provides the necessary resolution to focus accurately, without forcing you to squint and guess at single scale ranging from 8 inches to infinity. One nice feature of the 3030's manual focus operation is that the LCD viewfinder display enlarges by about 2x whenever the manual focus setting is changed. This is very helpful in deciding whether you've achieved good focus or not. (Although it's still difficult to judge critical focus from an LCD panel.) Here's a trick though, for further improving your focus accuracy using the LCD screen: Activate the digital zoom function, to get an additional 2.5x magnification of the subject. Once you're focused, you can back the lens off to frame the picture accordingly. (Actually, we're not certain that the C-3030 Zoom's lens doesn't change focus as you zoom it, but this technique seemed to work fairly well for us.)

As with other Olympus cameras in this series (the C-2000 Zoom and C-2020 Zoom), the C-3030 Zoom has body-mounted threads that accept an accessory lens adapter, the CLA-1. This adapter is a small cylinder that gives you a set of 43mm filter threads just flush with the furthest forward extent of the lens when it telescopes out. NOTE though, that we said "just flush" - If you by chance were able to obtain an accessory lens or filter with 43mm threads on it, it wouldn't fit: You need a millimeter or so ahead of the adapter before the glass starts. This usually isn't a problem, since you'd almost always have a thread adapter tacked on the front of the CLA-1 anyway, the 43mm being such an odd size. Still, you can find 43mm accessories out there, so we thought we should at least mention this...

While the C-3030's lens provides up to 3x optical zoom, an additional 2.5x digital zoom can be activated through the Record menu, albeit with noticeable quality degradation in the resulting images at the larger image sizes. (The "digital zoom" options on all digicams simply crop into the CCD array to reduce the angle of view. They thus directly trade resolution for "magnification.") Note that the digital zoom cannot be used with the uncompressed TIFF mode and is only accessible with the LCD monitor on.

With a measured visual resolution of 850-900 lines per picture height in our resolution tests, the C-3030 Zoom is just a hair off the highest we've seen to date (May, 2000). Olympus deserves credit though, for not trying for a snappier-looking picture by over-sharpening the image in the camera. Our philosophy on image sharpening is that the capture device (camera, scanner, whatever) should do the bare minimum, compensating only for the blurring tendencies of its sensor. Once an image has been over-sharpened, detail is irrevocably lost and objectionable artifacts appear. To our eye, the C-3030 Zoom gets it about right, applying some sharpening, but not too much. Even at that, it offers a "soft" image-sharpening option that provides images without any in-camera sharpening, for those times when you need to perform critical manipulations on the image in Photoshop(tm) or other editing program post-capture.

The lens appears to be of good albeit not unusual quality, turning in fairly typical distortion and aberration numbers for lenses at the higher end of the consumer digicam spectrum: Geometric distortion on the C-3030 was moderate at the wide angle end, as we measured a 0.76 percent barrel distortion. The telephoto end showed a smaller, 0.29 percent pincushion distortion. Both numbers are about typical among digicams we've tested, but we do prefer to see lower distortion at the wide angle end. (Just to be clear, roughly 0.8 percent is pretty typical among digicams we've tested, we'd just like to see **all** digicams have lower barrel distortion.) Do note though, that there's an excellent, easy solution to barrel or pincushion distortion available, in the form of the optional "dewarp" plugin for our favorite image twaker, PhotoGenetics. Read our [review of PhotoGenetics](#) for more details. Chromatic aberration was fairly pronounced at wide angle settings, with several pixels of color showing at the edges of elements in the corners of our resolution test target. At the telephoto end of the lens' range though, chromatic

aberration was essentially invisible. (This distortion is visible as a very slight colored fringe around objects at the edges of the field of view on the resolution target). The chromatic aberration was more severe at the wide angle end than the average for cameras we've tested, while it was much better than average at the telephoto end. We also noticed some slight vignetting of the image in the very corners, at the widest-angle lens setting. This last disappeared pretty quickly though, as we moved the lens out of the wide angle position.

Exposure

Exposure control is similar to the setup of the C-2020 Zoom, with an LCD menu system that controls most of the camera's settings. Four exposure modes are accessible through the mode dial: Program AE, Aperture Priority, Shutter Priority and Manual. Shutter speeds in all modes except Manual range from one to 1/800 seconds. The range broadens under the Manual setting to 16 to 1/800 seconds. A useful added feature relative to the previous model is that as you scroll through the various aperture/shutter settings in manual mode, the camera's exposure system remains "live". The camera tells you how it judges the exposure setting you've chosen, showing not only whether it thinks you're high or low, but by how much. It does this by displaying what it believes the over- or under-exposure to be using the digits on the LCD screen that normally indicate exposure compensation in automatic exposure modes. If you're more than plus or minus 3 EV units away from the correct exposure, the digits light up red, showing just +/- 3EV. This is really very helpful as it gives you a good idea of what the exposure will be like before snapping the shutter. (Other manufacturers take note: This is a nice feature, and shouldn't be too hard to add, if a camera already has a manual exposure mode.)

Exposure compensation is adjustable in 1/3 EV increments from -2 to +2, in all exposure modes except for Manual, by pressing the right and left arrow buttons. Additionally, the auto exposure bracketing function ensures you'll get a correct exposure by automatically bracketing up to +/- 2 EV in steps ranging from 1/3 to 1 EV unit. This feature lets you select either 3 or 5 shots in the series, and steps of 0.3, 0.6, or 1.0 EV units. Thus, the bracketing range could be as small as +/- 0.3EV, or as great as +/- 2EV. Once set, you just hold down the shutter button until all 3 or 5 exposures are captured. Very slick!

ISO is also adjustable, with available settings of Auto, 100, 200 and 400. The more sensitive settings do produce noisier images, but they provide welcome exposure flexibility. The default setting in Program exposure mode is Auto, whereas Aperture, Shutter, or Manual exposure modes force you to choose one of the explicit ISO settings. In Auto ISO mode, the camera will normally shoot at ISO 100, but will gradually increment the ISO setting in very dim conditions, trying to achieve the best tradeoff between shutter speed and image noise. We're not sure what the thresholds are for increasing the ISO rating in Auto mode, but it does seem to be pretty conservative about it: In some brief experimentation, it arrived at a shutter speed of 1/2 second (pretty slow) in a dimly-lit interior scene, yet still only bumped the ISO up to 200. "Automatic" systems like this are always a compromise, but we felt the C-3030 Zoom was doing about what we would have most of the time. It's also interesting to note that the Auto ISO settings aren't restricted to the 100/200/400 available manually - At least one of our experimental shots showed an ISO setting of 180 in the playback picture-info display.

The C-3030 Zoom provides two choices for exposure metering, Spot or the default Digital ESP metering system. Digital ESP is Olympus' name for matrix metering, but we don't know the specifics of it, how many segments it uses, etc. - For those of you unfamiliar with the term "matrix metering", it refers to a sophisticated exposure-metering technique that samples the brightness from multiple points across the image, and then applies some intelligence to set the exposure so as to not blow out highlights, plug shadows, etc.

The C-3030 offers a 12 second self-timer. You can also use the infrared remote to trigger the camera from a distance, which decreases the time delay to only three seconds. (This is one of our few quibbles with the otherwise excellent IR remote unit: Why are we forced to wait three seconds when using the remote? We'd greatly prefer relatively instantaneous triggering of the camera!) White balance can be set to Auto, Clear, Cloudy, Tungsten or Fluorescent to accommodate a variety of lighting situations. White

balance is another area where we have a request to make of Olympus: So-called "manual" white balance options are becoming more and more common on high-end digicams, and (properly implemented) they're very useful. Manual white balance options generally let you set the camera's white balance by pointing it at a white card and clicking the shutter (after appropriate menu setup, etc.) This usually provides a more accurate white balance than the automatic or preset options. The C-3030 Zoom is a sufficiently advanced camera that we'd expect to see a feature like this on it. Not a crippling omission by any means, but one that we think would be appreciated by the 3030's targeted audience of enthusiast-photographers.

The C-3030 Zoom incorporates a few entertaining options on the Picture Effect menu, enabling you to capture images in black and white or sepia tone. There are also White and Black Board settings for capturing text on light or dark backgrounds. These could be useful if you needed to grab meeting or lecture notes in a hurry. Oddly though, the resulting images, while purely black and white, are stored as RGB JPEGs, taking about the same amount of memory space as normal full-color images. This is rather odd: Overall, we'd strongly suggest just leaving the camera in color mode, and using a program like Pixid's White Board Photo to clean up the images later. (See our [review of White Board Photo](#) for more info on this unique program.)

Flash

The built-in flash on the C-3030 Zoom offers four main modes: Auto, Red-Eye Reduction, Fill-In and Off. According to Olympus' specs, the flash is effective out to 18.4 feet (5.6m) in wide angle and to about 12.5 feet (3.8 m) in telephoto. The internal flash provides good coverage in all but the widest-angle lens position: It's angle of coverage appears to correspond to a lens focal length more on the order of 35mm than the 32mm equivalent of the 3030. (Another holdover from the C-2020 Zoom?) You can adjust the flash intensity setting from -2 to +2 in 1/3 EV increments. Any of the flash modes can be combined with the Slow Sync setting, which allows the ambient lighting to make a greater contribution to the final exposure of the image. You can also produce shots which combine a motion blur on the subject (from the long ambient light exposure) with a sharp initial or final image (caught by the flash exposure). The C-3030 supports both "front curtain" and "rear curtain" triggering in Slow Sync mode, firing the flash at either the beginning of the exposure or at the end. So-called rear curtain sync is necessary to produce motion blurs on moving objects that trail the sharp, flash-exposed image, rather than precede it. A plus with the design of the C-3030 is the inclusion of an external flash sync socket, giving you even more exposure flexibility. It's important to note though, that the sync socket on the C-3030 is a proprietary design, set up for use with Olympus' FL-40 flash unit. Olympus apparently offers an accessory grip/cable combination that serves as an adapter for third-party flashes, but we don't know the model number or details on its availability.

To use an external FL-40 flash unit, the camera should be set to Aperture Priority or Manual exposure mode to control the amount of flash illumination reaching the CCD via the lens aperture setting (standard operating procedure for film cameras as well). The camera will attempt to produce a good exposure with its automatic settings, whether involving its own flash or not. Thus, if you've disabled its internal flash, you'll get a rather long exposure time in Aperture Priority mode, rather like the Slow Sync mode, whether you want that or not. Use Manual exposure mode with faster shutter speeds selected to avoid this problem. The C-3030 Zoom is unusual in that when you couple it to the FL-40 external flash, you have the option of using the internal and external flashes together. - This could be a bit of a help when you're really reaching for a distant subject, or for interesting bounce/direct flash lighting. The FL-40 also cooperates with the camera by allowing its power level to be controlled by the camera's flash exposure adjustment, mentioned above.

The manual is a bit unclear on using the 3030 with flash units other than the FL-40. To use any external flash (FL-40 or other unit), you do apparently need both the optional flash holder and flash cable. Info in the manual about third-party flashes is confusing and contradictory: In one place, it says the external flash must be used with the internal all the time. In another place, though, it says the external flash will

always fire, regardless of whether flash is enabled in the camera or not. We'll seek clarification from Olympus, but here's what we think the case is: 1) The external flash will always fire, as the sync contacts are linked to the shutter, and not affected by the internal flash status. 2) Third-party flashes won't accept flash-metering information from the camera, meaning that you'll have to regulate the light either by running the flash in Auto mode and making whatever adjustments it provides onboard, or by essentially operating the flash in "manual" mode, controlling the exposure via the camera's lens aperture.

A few caveats about external flashes with the C-3030 Zoom, or digicams in general for that matter: 1) Some external strobes have the polarity reversed on their sync connectors, and won't fire. (Cameras these days use SCRs to trigger strobes, rather than mechanical contacts, and SCRs are polarity sensitive.) 2) Some flashes put their full voltage on the sync connector, which is virtually guaranteed to blow the inner circuitry of the camera. (!) Always check the voltage on your sync connector before plugging a non-manufacturer flash into your digicam! - If you find more than a few volts there, save yourself an expensive repair, and buy a flash with a lower trigger voltage. (Studio strobe packs are particularly prone to this: Use extreme caution before attaching one to your digicam!) 3) If you're going to be shooting at wide angle, make sure your flash will cover a field of view equivalent to a 32mm lens on a 35mm camera. (Most will, some won't.) 4) If you get unexpectedly dim shots when operating at full flash power (distant subjects or small apertures), it may be that your flash is producing a light pulse longer than 1/200 of a second (Olympus' spec), so not all the light from the flash may be contributing to the exposure.

We didn't test the FL-40 with the C-3030 Zoom, but did have an opportunity to use one earlier, when we reviewed the Olympus C-2500L SLR camera. You can read our [review of the C-2500L](#) for more info on how it worked with the flash: We suspect the story with the C-3030 would be much the same. (To save you clicking the link, the short of it was that we liked the FL-40 very much indeed, and found it worked exceptionally well with the C-2500L's internal flash.)

Sequence Shooting Mode

The C-3030 offers a Sequence mode that mimics a motor drive, letting you capture between six and 12 separate pictures (depending on the complexity of the image, selected image size/quality, and the available SmartMedia space) at approximately 1.4 frames per second. In our own measurements, we indeed measured a frame rate of 1.39 frames per second at all resolutions, in autofocus mode. We discovered though, that the non-autofocus mode increased the frame rate to 3.17 frames per second (!), since the camera didn't have to wait for the lens to focus each time. The manual states that the maximum shutter speed in sequence shooting mode is 1/30 of a second, to avoid blurring. (Seems odd, we suspect it has more to do with managing the timing of the shots, rather than a concern over camera shake.) It also notes that the mode is available with all compression levels except for uncompressed TIFF. One obvious limitation of sequence mode is that the camera's internal flash may not be used with it. (The flash can't cycle at nearly 1.4 frames per second.) However, if you have an external flash capable of cycling at the 1.4 frame per second rate and shoot in aperture priority mode, you can use a flash with this mode.

Movies and Sound

The C-3030 continues the ability to record short movies, now extended to include sound. Movie mode is entered as a separate option on the main command dial. Movies may be recorded in either HQ (320 x 240) or SQ (160 x 120) resolution modes. Thanks to the C-3030 Zoom's huge buffer memory, the maximum recording time is limited only by memory card capacity, apparently up to a 32 megabyte limit. (The manual lists maximum seconds of recording time as a function of card size, but just lists "Larger than 32 megabytes" as the highest category, implying that large cards convey no additional recording time. - This makes sense, given that 32 megabytes is the size of the RAM buffer memory the C-3030 Zoom carries on board.) Here's a copy of the recording-time table from the manual:

Recording Mode	Resolution	Memory Card Capacity				
		2MB	4MB	8MB	16MB	Over 32MB
HQ	320x240 (15 frames/sec)	5	11	23	46	75
SQ	160x120 (15 frames/sec)	22	45	92	186	300

The available seconds of recording time appear in the status display panel (and in the LCD monitor if activated), based on the quality mode selected and space remaining on the card. You can use the zoom control while recording movies, but the motion of the zoom is somewhat slower than in still recording, and the zoom is apparently only a digital zoom. (Not an issue though, given the large difference between the CCD resolution and movi recording resolutions - This means that digital zoom in movie mode has the same effect as optical zoom in normal still photography, in that no image degradation should be visible as a result of using the zoom.) Manual focus, exposure compensation, focus lock, the self-timer, ISO setting, white balance and picture effects are also available while in Movie mode.

A first among cameras we've tested (May, 2000), the C-3030 even offers in-camera "editing" of movies in Playback mode. This capability is accessed via the Function->Movie Edit option on the playback menu. In this mode (see screen shot above), you can scroll forward and backward in the movie, and set cut points at the beginning and end of the sequence. Movie content between the two cut points will be preserved, the rest discarded. In a nice touch though, Olympus allows you to choose whether to modify the original movie file, or just save a new copy of it, reflecting the effect of the edit you've made. A very nice feature that we're surprised we haven't seen before. (Kudos to Olympus for thinking of it first.)

You can also record small "sound bites" to accompany images (both in Record and Playback modes). You get approximately eight seconds of record time for each image, assuming of course that there's enough space left on the memory card. This is a handy feature for "labeling" photos.

The only quibble we have with Olympus' implementation of Movie mode on the C-3030 Zoom (and it's a significant one) is that you don't get to hear the movies you've recorded when playing them back on the camera. Adding sound recording is a big feature improvement relative to the C-2020 Zoom, but it sure would be nice to at least be able to hear what you've recorded during playback. (The camera can output both video and sound to a TV or VCR via the included A/V cable, making that an effective playback mode if you have a TV handy. Still, it would be preferable to have some ability to hear a movie's soundtrack without resorting to external equipment.)

Panorama Mode

As with most Olympus digicams, the C-3030 offers a Panorama exposure mode when operating with Olympus' own panorama-enabling SmartMedia memory cards. In this mode, the exposure and white balance for a series of shots are determined by the first one taken. Images are saved individually and can then be assembled on a computer after they've been downloaded. While Panorama mode provides a useful function, it's less of an issue on cameras like the C-3030, which offer full manual exposure control. True, the panorama mode does lock the white balance in addition to the exposure, and does provide outline guides on the LCD screen to help align successive images, but doesn't offer the "ghost" images provided by some cameras to further assist image alignment. (Cameras with this feature retain a small portion of the previous image each time, moved to the other side of the LCD display, to help you line up objects in the scene with those in the frame you just captured.) The C-3030's Panorama mode also limits you to 10 exposures in the series before resetting the white balance and exposure values. Ten pictures is plenty for most situations, but almost certainly not enough if you're interested in stitching full 360 degree panoramas. For those, use Manual exposure mode, and a fixed white balance preset, such as "daylight." Overall, Panorama mode on the C-3030 Zoom is handy, but less useful than it could be, and

in our mind largely obviated by the camera's manual mode.

Shutter Lag/Cycle Times

When you press the shutter release on a camera, there's usually a lag time before the shutter actually fires. This time is to allow the autofocus and autoexposure mechanisms time to do their work, and can amount to a fairly long delay in some situations. Since this number is almost never reported on, and can significantly affect the picture taking experience, we now routinely measure it.

While the C-3030 Zoom is a very fast camera in other respects (see below), it's shutter lag in full autofocus mode is at the slower end of the range: We measured shutter delay at 1.40 seconds using full autofocus. The manual focus option brought the delay down to 0.48 seconds, and prefocusing by half-pressing the shutter button before the exposure dropped the delay to only 0.15 seconds. The camera does have a continuous autofocus mode, which we expected to decrease the shutter delay considerably, since the lens should more or less always be in focus at the time of the exposure. Unfortunately, this turned out not to be the case, with shutter delays in continuous autofocus mode being on the order of 1.15 seconds (varying from 0.9 to as high as 1.3 seconds: 1.15 seconds seemed to be typical of most shots.) The C-3030 Zoom's autofocus delay is longer than most cameras we've tested, manual focus delay is about average (among camera that offer a manual focus option), and the prefocus delay is shorter than average. (Do note though, that for sports shooting, the impact of the long autofocus delay may be considerably offset by the availability of a very fast continuous-shooting mode - see below.)

Thanks to an enormous 32 megabyte RAM buffer memory, the C-3030 Zoom is an unusually fast camera from shot to shot. We've heard claims that it can capture a shot every second, but our own evaluations fell a little short of that mark. The fastest single-shot (that is, non-continuous mode) shot to shot time we measured was with manual focus selected. In that mode, the C3030 Zoom could capture an image every 1.75 seconds in its lowest resolution mode, and every 2.2 seconds in high resolution (non-TIFF) mode. It's possible there may be some additional delay if you ever managed to fill up the buffer, but we never encountered this while using the 16 MB SmartMedia card supplied with our test unit. (We filled up the memory card in a about 16.3 seconds, capturing a total of 8 shots at maximum resolution.) In autofocus mode, the lens-focusing delay increased the cycle time by about 0.9 seconds, to 2.65 and 3.1 seconds, for the low and high resolution images respectively.

We mentioned the C-3030's high speed in continuous or "sequence" mode earlier. Sequence mode has two options, normal and autofocus. In normal sequence mode, the camera focuses and calculates exposure and white balance once, as soon as the shutter button is pressed. These settings are then held for the entire series of five rapid-fire shots. In our tests, that series of five shots happened very quickly indeed, clocked at a frame rate of 3.17 frames per second. This is seriously fast for full-resolution images! In autofocus sequence mode, the camera focuses and calculates exposure and white balance for each shot in the series. This doesn't slow it down as much as you might expect though, as the camera apparently only has to make minor adjustments to the focus from one shot to the next. The end result is a frame rate of 1.74 frames per second, a very respectable performance.

Operation and User Interface

The user interface on the C-3030 Zoom relies heavily on the LCD monitor for menu selections and feedback on current settings during use. The resulting interface will be pretty clear to most users, but we do wish there were an "advanced" mode that would make greater use of the top-panel LCD data readout. The camera's non-LCD power consumption is so low that it's a shame to spoil it by requiring the LCD to be used for all but the simplest option selections. The top-panel data readout does display status information for a wide range of camera functions (see the scan below, taken from the manual), but changing most of them requires returning to the rear-panel LCD display. Here's an illustration showing the various elements of the top-panel LCD readout, courtesy of Olympus:

As with the C-2000 and C-2020, we liked the user interface of the C-3030 a great deal. We generally prefer mode dial interfaces like the C-3030's, as they greatly simplify the menu structure and allow faster operation. One of our favorite user interface features is that the camera tells you what aperture and shutter speed it's selected whenever the shutter button is half pressed. For photographers accustomed to knowing what their camera is doing, this sort of feedback is invaluable, and present on very few digicams we've tested. We also especially like the distance display employed in the manual focus option: Too many digicams with manual focus options give you no feedback as to the actual distance the focus is set to. In situations where there's too little light to see the subject well (or when the subject perhaps isn't in position yet), an actual distance readout is invaluable. We also liked the way the manual focus indicator has two ranges, one running from 2.6 feet to infinity, the other from 8 to 31 inches. This makes it much easier to set the focal distance accurately.

As mentioned earlier, we really like the tiny infrared remote control provided with the C-3030 Zoom, as it greatly reduces any disturbance of the camera when taking long exposures on a tripod. (This IR remote has been a feature in the Olympus line since the original C-2000 Zoom, and we've used it heavily in our own studio work, taking product shots for use on our web site.) The remote also allows you to change the exposure compensation setting or zoom the lens in and out. In Playback mode, you can scroll between pictures and move in or out of thumbnail and zoom playback modes (also helpful when viewing images on a television screen). Olympus states the range of the remote as five meters (16.4 feet) when aimed at the camera from straight ahead, and three meters (9.8 feet) when aimed from an angle of 15 degrees to either side of center. These range numbers may be correct in outdoor conditions, with lots of stray IR from the sun bouncing around: In practice, under studio conditions, we've had great luck at what seem to be greater distances, even bouncing the IR signal from the remote off the subject. A very, very handy gadget in the studio, perhaps even more so for those photographers working with children or other subjects requiring a lot of hands-on interaction. (You could connect the camera to a video monitor as a "remote viewfinder", and control most of the picture-taking from the remote.)

Control Enumeration

Power / Mode Dial

Located on the top of the camera, this dial selects the various camera operating modes (Playback, Off, Program, Aperture/Shutter Speed/Manual and Movie). As on the C-2020 Zoom, this dial also controls power, eliminating the frequent confusion between the power button and shutter release that plagued owners of the original C-2000 Zoom camera.

Shutter Button

Located in the center of the optical zoom control lever, the shutter button sets focus and exposure settings when halfway pressed and triggers the shutter button when fully pressed. In Playback mode, the shutter button works in conjunction with the printing function to select the number of prints to make.

Zoom Lever

Located on top of the camera, surrounding the shutter button (see photo above), the zoom lever controls the optical zoom in all exposure modes. In Playback mode, the lever switches back and forth between index view, normal image display and playback zoom.

Flash / Erase Button

Located at the top of the back panel, this button controls the flash mode in all exposure modes. Pressed sequentially, it cycles through Auto, Red-Eye Reduction, Fill-In and Off modes. In Playback mode, this button pulls up the Erase menu which allows you to erase the current image displayed or all images.

Macro / Spot Metering / Print Button

Directly beneath the Flash / Erase button on the back panel is the Macro / Spot Metering / Print button. In all exposure modes, this button cycles between Macro, Spot and Digital ESP metering modes. In Playback mode, it accesses the Print screen, which allows you to set up the individual images for printing. (While we haven't reported on it, the print-setup function on the C-3030 Zoom is **much** more powerful than we've seen in other cameras to date (May, 2000), even allowing you to specify cropping for each picture!)

Four Way Jog Dial

Not really a "dial", but rather a set of four pushbuttons, arranged in a circular layout. Olympus moved to the four buttons on the C-2020 Zoom, from the rocker-button design of the C-2000 Zoom. The four buttons are **much** more sure-footed to navigate than the earlier toggle design, in that you never have

problems of inadvertently actuating more than one direction control at a time. Also located on the top of the back panel, a lot of the camera's operation revolves around this control. In all capture modes except Manual, a left/right actuation increases or decreases the exposure compensation setting (provided the LCD view screen is active). In Aperture or Shutter priority exposure modes, up/down actuation of the jog dial adjusts the setting of the lens aperture or shutter speed, depending on the mode you're in. In Manual mode, the up and down arrows control shutter speed while the left and right control aperture. In Playback mode, left/right actuation moves forward or back among the pictures in memory, or scrolls around the expanded image in zoomed playback mode. In the LCD menu system, the jog control steps between menus and selects settings.

OK/MF Button

Located on the back panel, on the right side of the LCD monitor, this button confirms selected menu settings when in the LCD menu screen. If pressed when not in the menu, it activates the manual focus option, which pulls up a distance scale on the LCD to assist in focusing. In Playback mode, this button write protects individual images from being accidentally erased. (Note though, that "protected" images aren't preserved if the memory card is formatted!)

Display Button

Located beneath the OK button, this turns the LCD monitor on or off.

Menu Button

Located directly beneath the Display button, this activates the menu system on the rear panel LCD monitor (it also activates the LCD monitor if it was disabled).

Dioptic Adjustment Dial: Located on the left side of the optical viewfinder, this dial alters the optical viewfinder to accommodate eyeglass wearers.

Camera Modes and Menus

Movie Mode

Accessed by turning the mode dial to the movie camera symbol, this mode allows you to capture up to 60 second SQ movies and up to 15 second HQ movies with sound. Shutter speed is automatically set anywhere from 1/30 to 1/10,000 seconds.

Aperture Priority: Accessed by turning the mode dial to the A/S/M symbol, and then selecting the "A" option from the A/S/M Mode setup submenu, this mode allows the user to select the desired lens aperture as the camera adjusts the shutter speed to achieve the correct exposure. If the required shutter speed is beyond the camera's capabilities, the aperture status number in the LCD will flash and an arrow

will indicate if under or over exposed.

A/S/M

Shutter Priority: Accessed by turning the mode dial to the A/S/M symbol, and then selecting the "S" option from the A/S/M Mode setup submenu, this mode allows the user to select the desired shutter speed while the camera adjusts the aperture to achieve the correct exposure. If the required aperture is beyond the camera's capabilities, the shutter speed status number in the LCD will flash and an arrow will indicate whether it's over or under exposed.

A/S/M

Manual Mode: Also accessed via the A/S/M setting on the mode dial, and then selecting the "M" option from the A/S/M Mode setup submenu, Manual mode allows the user to select both the desired aperture (F/2.8 to F/11) and shutter speed (16 to 1/800 seconds, depending on the ISO setting). As noted earlier, the camera tells you what it thinks of the exposure setting you've chosen, showing not only whether it thinks you're high or low, but by how much. It does this by displaying what it believes the over- or under-exposure to be using the digits on the LCD screen that normally indicate exposure compensation in automatic exposure modes. If you're more than plus or minus 3 EV units away from the correct exposure, the digits light up red, showing just +/- 3EV.

P

Programmed Exposure: Accessed by turning the mode dial to the P, this mode lets the camera select both shutter speed and lens aperture, but does so in a fairly intelligent manner, opting for faster shutter speeds when the lens is in the telephoto position than when it's working in wide angle mode.

▶

Playback Mode: Accessed by turning the mode dial to the playback symbol, this mode allows the user to view previously captured images. Here, the jog dial advances between successive frames stored in memory. The zoom toggle switches the display to an index mode when moved in the wide angle direction and zooms in on the currently displayed image by 3x when moved in the telephoto direction. When zoomed in on an image, the jog control can be used to move the enlarged view around the full image area, letting you inspect all parts of it.

Capture Mode Menu

- **Drive:** selects between One-Shot, Sequence, AF Sequence (exposure metered with each frame), Self-Timer/Remote and Auto Bracketing.
- **White Balance:** selects between Auto, Clear, Cloudy, Tungsten and Fluorescent white balance options.
- **ISO:** sets the ISO at Auto, 100, 200 or 400.
- **Flash +/-:** adjusts the flash intensity from -2 to +2 in 1/3 EV increments.
- **Slow:** accesses the camera's slow-sync mode with options for front-curtain sync (Slow 1) or rear curtain sync (Slow 2)
- **External Flash:** sets the camera either to use both the internal and external flashes or just the external.
- **Digital Zoom:** turns the 2.5x digital telephoto feature on or off.
- **Function (Picture Effect):** allows the user to shoot in Black & White, Sepia, White Board or Black Board modes.
- **Sound:** activates the sound recording function.
- **Panorama:** activates the panorama mode (only enabled with Olympus SmartMedia cards).

- **Card Setup:** formats the SmartMedia card.
- **Mode Setup:** pulls up the mode submenu (shown below)
- **Quality:** sets image quality at TIFF, SHQ, HQ, SQ1 or SQ2.
- **A/S/M:** sets the exposure mode at Aperture Priority, Shutter Priority or Manual.

Mode Setup sub-menu (Capture Modes)

- **All Reset:** turns the all reset function on or off (on resets all settings to factory default whenever the camera is turned on). A new option on the C-3030 is the "Custom" selection here. This takes you to a five screen (!) sub-menu, letting you select default settings that will be selected whenever the camera is powered up. Settable options include flash mode, macro/spot combinations, lens zoom setting (conveniently expressed in 35mm-equivalent terms), f-stop, shutter speed, exposure compensation, manual/auto focus, LCD on/off, "drive" (single, continuous, remote/self-timer, or bracket modes), white balance, ISO, flash exposure compensation, slow sync flash mode, internal/external flash enable, digital zoom, image functions (black/white, sepia, etc), sound recording, still-mode resolution, A/S/M mode, movie-mode resolution, and info display enable. (Whew! - Basically any function of the camera can be programmed to be automatically set up when the camera powers-on. Note though, that some settings will depend on others: If the camera is set to default to aperture-priority mode, the shutter speed will adjust as required, based on the preprogrammed aperture value. Only if manual mode is preselected will the preprogrammed values for both the shutter speed *and* aperture be used.)
- **Sharpness:** sets image sharpness to Hard, Normal or Soft.
- **TIFF:** sets the TIFF resolution size to 2048 x 1536, 1600 x 1200, 1280 x 960, 1024 x 768 or 640 x 480.
- **SQ1:** sets the SQ resolution to 1600 x 1200 or 1280 x 960, High or Normal.
- **SQ2:** sets the SQ resolution size to 1024 x 768 or 640 x 480, High or Normal.
- **Volume:** sets camera volume to Off, Low or High.
- **Fulltime AF:** turns continuous autofocus on or off. Use in situations requiring slightly faster shutter response. Don't use if battery life is critical. In fast-action situations (sports, etc), use Sequence mode to rapidly shoot multiple frames, then discard unneeded shots.
- **Record View:** turns the instant image review function on or off.
- **File Name:** resets file numbers with each new card or continues in sequential order.
- **LCD Brightness:** adjusts the brightness of the LCD.
- **Date/Time:** sets the camera date and time.
- **M/Ft:** sets manual focus distance display to meters or feet.

Playback Menu

- **Play:** activates a slide show display for still images or plays back movies.
- **Info:** turns the image information display on and off.
- **Sound:** activates the sound recording function.
- **Function:** for use with Olympus special function cards.

- **Card Setup:** formats the SmartMedia card.
- **Mode Setup:** brings up the following submenu:
 - **All Reset:** turns the all reset function on or off (on resets all settings to factory default on power-up), or select a preset group of Custom settings (as described above under the capture-mode setup menu).
 - **Volume:** sets annunciator beep volume to Off, Low or High.
 - **Index Display Adjustment:** sets index display to four, nine or 16 images.
 - **Brightness:** adjusts the LCD brightness.
 - **Date/Time:** adjusts the camera's date and time setting.

Image Storage and Interface

The C-3030 uses SmartMedia memory cards and comes packaged with a 16 megabyte card. You can upgrade to sizes as large as 64 megabytes. (From third parties, anyway: As of this writing in May, 2000, the largest card sold by Olympus themselves was a 32 meg unit. SmartMedia cards as large as 128 megabytes are planned by the end of 2000.) We like the C-3030's file naming protocol, which optionally numbers each image shot with the camera progressively, also including the month and day at the beginning of the file name. (This last is really handy for those of us who are organizationally-challenged: You can immediately tell when your photos were taken, even if you never took time to organize them by date or event.)

Entire SmartMedia cards can be write protected by placing a write protection sticker over a specific spot on the card. Stickers can only be used once and must be clean to be effective. (We're not wildly enthusiastic about the write-protect capabilities of SmartMedia cards.) Additionally, the C-3030 allows you to write protect individual images by pressing the MF/OK button on the back panel while in Playback mode. It's important to note that write-protecting individual images does not prevent them from being deleted when the card is reformatted, though.

The C-3030 comes with interface software and cables for both Mac and Windows computers, namely, a cable for the super-speedy USB interface, as well as a standard serial cable.

Following are the approximate resolution/quality and compression ratios for an 8mb card (compression numbers based on our own computations):

Resolution/Quality vs Image Capacity	2048 x 1536		1600 x 1200		1280 x 960		1024 x 768		640 x 480	
	Images	Approx. Compression	Images	Approx. Compression	Images	Approx. Compression	Images	Approx. Compression	Images	Approx. Compression
Uncompressed Quality	0	0:0	1	1:1	2	1:1	3	1:1	8	1:1
SHQ	3	4:1	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Fine Quality	10	12:1	5	4:1	8	4:1	13	4:1	32	4:1
Normal Quality	N/A	N/A	16	12:1	24	11:1	38	11:1	82	9:1

And here's a more comprehensive list, showing capacities of different-sized cards. (Extracted from the C-3030 Zoom's manual.

Number of Still Pictures that can be Taken (without sound)

Recording Mode	Number of Pixels	File	Memory Capacity						
			2MB	4MB	8MB	16MB	32MB	64MB	
TIFF	2048 X 1536	TIFF	0	0	0	1	3	6	
	1600 X 1200		0	0	1	2	5	11	
	1280 x 960		0	1	2	4	8	17	
	1024 x 768		0	1	3	6	13	27	
	640 x 480		2	4	8	17	34	68	
SHQ	2048 X 1536	JPEG	0	1	3	6	13	27	
HQ	2048 X 1536		2	4	10	20	40	81	
SQ1	HIGH (quality)		1600 X 1200	1	2	5	11	22	45
	NORMAL		1280 X 960	3	7	16	31	64	128
HIGH (quality)	1024 X 768			2	4	8	17	34	70
NORMAL			640 X 480	5	12	24	49	99	199
HIGH (quality)	3			6	13	26	53	107	
NORMAL	9			18	37	76	153	306	
HIGH (quality)	7			16	32	66	132	266	
NORMAL	20		40	82	165	331	665		

Video Out

The C-3030 has a video-out port which supports the NTSC timing format on US and Japanese models (we assume that the PAL standard is supported on European models). The video output can be used for reviewing previously shot images or running slide shows from the camera, but also shows all the LCD menu screens as well as the preview display from the LCD viewfinder. Combined with the very flexible infrared remote control we mentioned earlier, the availability of a live viewfinder display via the video signal opens interesting possibilities for portrait photography, using a video monitor as a remote

viewfinder.

Actually, the output cable is a true A/V cable, as it fans out into two RCA jacks, one for video, and one for audio. As noted above, this is the only way to hear the sounds you've recorded directly from the camera, since there's no internal speaker. Plugged into any video monitor (or TV with direct video and audio inputs), the audio capabilities of the C-3030 Zoom make for an unusually effective portable presentation device.

Power

The C-3030 is powered by four internal AA Ni-Mh, Ni-Cd, alkaline or lithium batteries or two CR-V3 (Olympus LB-01) batteries. The camera ships with two of the new CR-V3 batteries in the box, but no rechargeable batteries. Do yourself a favor, and don't even use the CR-V3s in the camera, but instead put them immediately into your camera bag as a backup power source for such time as your rechargeable batteries (inevitably) are dead when just when you need them the most. Go out and buy a couple of sets of high-capacity NiMH rechargeable AA cells and a good-quality charger, and plan to use these for the main power source of the camera. The CR-3V lithium cells provide great battery life, and more or less indefinite shelf life (something like 5 years or so) in your camera bag. They thus make an absolutely excellent backup power source that'll always be ready when you need it. For routine use though, they're just too expensive, at something like \$10 apiece. (A pair? - no matter, still way too pricey, IOHO.)

Earlier cameras in this series from Olympus (the C-2000 Zoom and C-2020 Zoom) were surprisingly efficient in their battery usage, particularly if you kept the LCD display screen turned off. The C-3030 Zoom continues this happy tradition: It's "idling" power in capture mode with the display off is almost nil, meaning you can comfortably leave the camera on all day, so it'll always be ready whenever you want to take a picture. This is a very nice feature, and really increases its usefulness. Despite this thrifty battery usage, we still strongly recommend that you pick up a couple extra sets of high-capacity rechargeable batteries and a decent charger. Here's a table showing the C-3030's power consumption in a variety of operating modes. (Overall, it has very good power efficiency for a three megapixel camera: A good set of NiMH AA cells should easily last for a full day's shooting, if you can just avoid the temptation to ogle your pictures on the LCD monitor.)

Operating Mode	Power Drain
Capture Mode, w/LCD	610 mA
Capture Mode, no LCD	< 10 mA
Half-pressed shutter w/LCD	620 mA
Half-pressed w/o LCD	340 mA
Memory Write (transient)	590 mA
Flash Recharge (transient)	(not measured)
Image Playback	460 mA

Memory Retention

We don't normally comment about memory retention in digicams (clock/calendar, settings, etc), but at least one other internet reviewer has knocked the C-3030 Zoom for losing its memory if the batteries are removed for more than an hour or so. So much has been made of this in various discussion forums and newsgroups that we felt compelled to comment. While it is certainly convenient for cameras to have a separate lithium battery to provide backup power to the clock/calendar chip and settings memory, the C-3030 is by no means unique in lacking that feature. The earlier C-2000 had a backup battery, but the

C-2020 did not. More to the point, the Nikon Coolpix 990 (with which the C-3030 directly competes) does not either, meaning that it will lose its date/time setting at least as fast as the C-3030 Zoom will. True, the Canon Powershot S-20 does have a clock backup battery, but we don't feel it's fair to single out the C-3030 Zoom on the basis of this one deficiency. For our part, we invariably leave one set of our NiMH batteries in our digicams all the time anyway. It's true that NiMH cells have a relatively short shelf life, but not nearly to the extent that other authors have represented: Some have claimed that NiMH cells lose 5% of their charge per day: While some cells may show this level of self-discharge, we've more often heard quoted a figure of 1% per day, and this matches our own (non-quantitative) experience more closely. Thus, while we would clearly like to see a lithium clock-backup battery in the C-3030 Zoom, we don't feel it deserves any special condemnation for its lack thereof.

Included Software

The C-3030 comes with a very nice complement of software on an included CD. Direct camera control and image downloading are provided by an updated version of Olympus' own Camedia software package (version 2.0) which allows you to download and save images to your hard drive, and provides rudimentary organization capabilities. We confess to slightly mixed feelings on the other half of the package though: On the downside, we were chagrined to see that the excellent panorama-making program QuickStitch (from Enroute Software) is no longer included in the software bundle. On the upside though, the even more useful (at least to the majority of users) Photoshop LE version 5.0 is included. (Even better, all software packages provided are fully functional on both Mac and PC.) While there are many other image-processing programs out there, Photoshop is consistently our favorite, thanks to the level of control and features it provides. The "LE" version of Photoshop lacks only a few of the features of the full-retail version (notably color management tools and support for non-RGB color spaces), and is entirely suitable for use by the serious digicam owner. Adobe recently began selling Photoshop LE on the open market (previously, it was only available in software bundles like this), and its \$99 retail price is a very valid representation of its value. Thus, if you don't already own Photoshop, buying a C-3030 Zoom could end up saving you a very real \$99 relative to where you'd likely end up anyways. So, while we miss the incredible QuickStitch panorama-maker, including Photoshop LE is a huge plus.

Test Results

In keeping with our standard policy, our comments here are rather condensed, summarizing our key findings: For a full commentary on each of the test images, see the [C-3030 Zoom's "pictures" page](#).

As with all Imaging Resource camera tests, we encourage you to let your own eyes be the judge of how well the devices performed: Explore the images on the [pictures page](#), to see how well the C-3030 performed, and how its images compare to other cameras you may be considering buying.

Overall, the C-3030 Zoom produced exceptional images, befitting its status as a top-of-the-line 3.3 megapixel digicam. Color accuracy was good, although our shots of the MacBeth(tm) chart showed a somewhat warm cast with all white balance settings, and the bright yellow patch had slightly lower color saturation. (A common digicam problem.) Overall, we felt the color was quite good, however.

The Olympus C-3030 performed toward the top of the current range of 3.3 megapixel digicams in the resolution department, with a resolution that we "called" as between 850 and 900 lines per picture height in both the horizontal and vertical directions. While just a hair off from the sharpest performance we've seen to date, the 3030 deserves credit for not applying heavy-handed in-camera sharpening in an attempt to boost the apparent resolution.

As did the 2 megapixel C-2020 Zoom before it, the C-3030 Zoom offers excellent exposure control, with choices of matrix or spot metering, full aperture and shutter control, including an optional manual mode, and ISO speeds ranging from 100 to 400. The C3030 Zoom performed very well in our low light tests, producing very usable images down to light levels of 1/8 of a foot-candle. (We're chiding ourselves for not having gone down to 1/16 of a foot-candle, since it's our guess that we would have obtained usable if not somewhat dim pictures at that level as well.) At these low light levels, with exposure times of 2 to 10 seconds, there is a moderate amount of noise present in the images. (We direct readers to Mike Chaney's

excellent Qimage Pro program, for a tool with an amazing ability to remove image noise without significantly affecting detail.) To put the C3030's low light performance in perspective, an average city night scene under modern street lighting corresponds to a light level of about 1 foot-candle.

We found the C-3030's optical viewfinder to be a little tight, showing approximately 82 percent accuracy at wide angle and about 81 percent at telephoto. (Note that we've changed our nomenclature on this to better reflect what you see looking into the viewfinder: We previously would have referred to the C-3030's viewfinder as "loose"...). These numbers are from the 2048 x 1536 resolution size but the smaller, 640 x 480 resolution size numbers are similar at 83 percent accuracy for both wide angle and telephoto. We also noticed that the framing here slants just a little to the left vertically, possibly the CCD on our test model was shifted a little. The LCD monitor proved to be quite accurate, showing about 97 percent frame coverage at wide angle and slightly over 100 percent accuracy at the telephoto setting. (The covered area is just barely inside the darker lines we use to frame the viewfinder accuracy target). As with the optical viewfinder, the smaller, 640 x 480 image sizes weren't too far off from the larger ones (about 96 percent accuracy at wide angle and over 100 percent accuracy at telephoto). We generally like to see the LCD monitor as close to 100 percent accuracy as possible, so the C-3030 does a pretty good job in that respect.

The C-3030 does pretty good job in the macro category, capturing a minimum area of 3.35 x 2.52 inches (85.21 x 63.91 mm). This is about an average minimum coverage area among digicams we've tested, but the body threads of the C-3030 in conjunction with Olympus' CLA-1 filter adapter permit the addition of external macro lenses for much tighter focusing.

Overall, we found the C-3030 Zoom to be a very worthy contender at the upper end of the current (May 2000) digicam spectrum. Image quality, resolution, and sharpness are all very good, and the camera provides excellent exposure control as well as very good low light capability: An impressive performance!

Conclusion

Well, from our previous review of it, it's probably pretty clear that we really liked the previous Olympus C-2020 Zoom. (We like it well enough in fact that it's the camera we use to do all our studio photography with.) The C-3030 Zoom is a very worthy upgrade, bringing not only increased resolution but numerous feature and user-interface enhancements as well. It's probably safe to say that if you liked the C-2020 Zoom, you'll love the C-3030 Zoom. All in all, another great digicam from Olympus, and one that we think competes very strongly at the upper end of the current "prosumer" digicam spectrum.

Nikon Coolpix 990

Nikon updates the hugely successful Coolpix 950, with 3.34 megapixels and numerous enhancements

(Review first posted 3/1/2000)

- *Full 3.34 megapixel sensor delivers 2048x1536 images
- *Exceptionally well-designed user interface and controls
- *32 Megabyte SDRAM buffer for 2 second cycle time
- *Enormous creative control and flexibility
- *Excellent color and tonality

Manufacturer Overview

By carefully applying their camera-building expertise honed in the professional and advanced-amateur segments of the film-camera market, Nikon has developed a commanding position in the digicam world, even though their consumer digital camera lineup has consisted of only two models. The key has been the exceptional image quality and picture-taking feature set embodied in their cameras, which have obviously struck a responsive chord with digicam enthusiasts. When the 1.3 megapixel Coolpix 900 first burst on the digicam scene almost two years ago, it was an immediate hit. The 2.1 megapixel Coolpix 950 a year later extended the winning streak, and now the 3.34 megapixel Coolpix 990 appears poised to do the same again. (Meanwhile, the Coolpix 800 has been a popular choice for an inexpensive 2 megapixel digicam with a slightly less robust feature set.)

Besides increasing the 990's resolution to a full 3.34 million pixels, Nikon has also upgraded several camera functions, added numerous features, and improved the camera's physical design.

Highlights

- 3.34 megapixel, 1.13 inch, high-density CCD delivering image sizes up to 2048 x 1536 pixels (including a 3:2 aspect ratio 2048 x 1360 pixel size).
- 1.8 inch, 110,000 dot, low temperature, polysilicon TFT LCD display.
- 3x optical zoom, 8 to 24mm lens (equivalent to a 38 to 115mm lens on a 35mm camera).
- User activated digital telephoto in incremental steps from 1.1x to 4.0x.
- Continuous and Single autofocus modes with multiple focus areas and manual focus with peaking and distance readouts.
- Infinity and Macro focus modes.
- Variable ISO at Auto, 100, 200 or dEF.
- Full Automatic and Manual exposure modes with several manual options (Program, Flexible Program, Aperture Priority, Shutter Priority and full Manual).
- Single, Continuous, Ultra High Speed Continuous, VGA Sequence, Multi-Shot 16 and Movie shutter modes.
- White balance with Auto, Manual, Fine (Outdoors), Incandescent, Fluorescent, Cloudy and Speedlight options.
- Shutter speeds from eight to 1/1000 seconds as well as a Bulb setting for longer exposures.
- 10 or three second self-timer.
- Built-in flash with Auto, On, Off, Slow Sync and Red-Eye Reduction modes.
- External flash sync terminal.
- USB and Serial interfaces.
- Image capture in compressed JPEG or uncompressed TIFF.

What's New

Since many people reading this review will be familiar with the previous Coolpix 950, it makes sense to begin with a list of the new features Nikon has included on the 990. As you can see, engineering the 990 was more than a matter of just slapping a larger sensor into an existing design. Here's a (doubtless partial) list of what's new:

- 3.34 million pixel sensor, up from 2.11 on the 950.
- 5-zone autofocus system, for greater AF accuracy (inherited from Nikon's pro film and digital SLR cameras).
- 50-step manual focus, with "peaking" indicator.
- 7-blade iris diaphragm, providing true 1/3-stop aperture control.
- 256-element Matrix white balance for improved auto white balance accuracy.
- Optional user "fine tuning" of white balance settings.
- Both full-manual and auto-bracketing exposure options.
- A rugged, side-opening CompactFlash memory slot. (BIG kudos for that!)
- "Stepless" digital zoom, from 1.1 to 4.0x magnification
- USB interface option for high-speed file downloads
- Easier menu navigation via a rear-panel jog control
- Spot metering optionally linked to area autofocus system
- Variable image sharpness settings

- Ability to use self-timer function while in macro focusing mode. (A top request!)
- User-selectable NTSC or PAL video output
- Histogram-based exposure confirmation option
- Smaller, but higher-resolution LCD panel
- "Memory" for last-used zoom lens setting
- Optional fixed-aperture zoom mode

Executive Overview

We're pleased to report that the Coolpix 990 takes all the best features of the previous 900 and 950 models and combines them with a host of new ones that make this camera really shine. The swivel-lens design is one of our favorite design elements, as it greatly enhances the camera's optical flexibility. Additionally, the control layout stayed relatively the same but with a few additional features, such as the programmable Function buttons. (These programmable buttons make one handed operation of the camera much more feasible under varying conditions.) The camera provides both a real-image optical viewfinder and an LCD monitor display for image composition. A nice feature on the LCD is the very extensive information display that reports a variety of exposure information, including aperture and shutter speed settings. In Play mode, the LCD gives an equally informative readout on captured images and also offers an index display of thumbnails and a playback zoom option.

Optically, the Coolpix 990 is equipped with a 8 to 24mm, 3x zoom lens (equivalent to a 38 to 115mm lens on a 35mm camera), made up of nine elements in eight groups (all made from environmentally friendly glass, we might add). New to the 990 is the seven blade iris diaphragm design, which greatly extends aperture control over the earlier 950. Zoom is easily controlled via the W and T buttons on the back panel and the settings menu even allows you to select the Fixed Aperture feature, which keeps the aperture constant while the lens zooms. A 4x digital zoom can be turned on and off through the settings menu and offers an "stepless" incremental zoom range from 1.1x to 4.0x. We should also mention here, that the 990 has a nice variety of focusing options, including Continuous and Single autofocus as well as a manual control. Under the autofocus setting, you can set the desired focus area, or let the camera decide on its own (which displays a complex target series on the LCD panel and bases focus on the object closest to the lens). With manual focus, you can select a peaking feature that shows what part of the image is in focus, as well as a distance scale to help in difficult situations.

Exposure-wise, we greatly enjoyed the flexible options under the Manual Record setting. When you turn the camera on, you have the option of a completely Automatic or Manual Record mode, in addition to the Play mode. Under the Automatic Record mode, the camera handles everything, from the shutter speed to the white balance, but when you switch to Manual Record, your options multiply greatly. Within the Manual Record mode, you can select either Program, Flexible Program, Aperture Priority, Shutter Priority or Manual exposure modes. Program does exactly as it sounds and selects the aperture and shutter speed, but you now have absolute control over white balance, exposure compensation, etc. Flexible Program does the same but instead lets the user select from a variety of aperture and shutter speed combinations. Aperture Priority and Shutter Speed Priority are also pretty self-explanatory, letting the user select one value while the camera selects the other. Finally, Manual gives you total control over everything, a feature we really like. Shutter speeds are adjustable from eight to 1/1000 seconds (with a bulb setting for longer exposures) and apertures range from F/3.5 to F/9.8.

The Coolpix 950 already offered outstanding features like Best Shot Select and a variety of continuous shooting modes. These are all repeated on the 990 and accompanied by a few new ones. In addition to the Continuous and Multi-Shot 16 shooting modes, the 990 also offers an Ultra High-Speed Continuous (approximately 30 frames per second with a total of 80 QVGA shots) and a Movie mode (up to 40 seconds of QVGA sized images at 15 frames per second). There's also an Auto Bracketing feature that brackets as much as two stops up and two stops below the set exposure, producing a total of five images. We really enjoyed these features and the amount of creativity and flexibility they allow. We were also

pleased with the return of the extensive white balance menu from the 950 (Auto, Preset, Fine, Cloudy, Incandescent, Fluorescent and Speedlight) and the variety of metering options (the famous 256-element Matrix mode, Center-Weighted and Spot). Also, under the settings menu, we enjoyed the ability to alter the in-camera sharpening as well as increase or decrease the contrast or turn the image into monochrome black and white. Not to mention the ability to connect an external flash and use with or without the built-in flash. This camera is so feature laden, it's hard to find lack to complain of.

The Coolpix 990 uses CompactFlash for image storage and runs on four AA batteries. We found the camera a little power hungry (partly because of our reliance on the LCD monitor during the studio shots), so we highly recommend keeping a couple sets of spares around or working with the AC adapter when possible. The camera supports both USB and standard serial connections (using a dual purpose port), for quick connection to a PC or Mac. (The availability of a USB connection is decidedly good news on a high-resolution camera, especially one that can make nearly 10 megabyte uncompressed TIFF files like the '990!) There's also an NTSC video cable (European models ship with PAL) for connecting to a television set.

What a camera! We really love the almost excessive amount of control and think that you will too. The Coolpix 990 gives you as much control as you want, but also offers the luxury of sitting back and letting the camera do all the work as well. With its bevy of exposure options, compact portability, and high image quality we think this camera will be very popular.

Design

Nikon continues the swivel-lens design of the Coolpix 900 and 950 models with the Coolpix 990. With its ability to swivel just shy of 360 degrees, the lens can be pointed back towards the user, straight ahead or straight down to the ground, while keeping the LCD screen oriented for easy viewing. The camera body is compact and light weight, measuring approximately 5.9 x 3.1 x 1.5 inches (15 x 7.87 x 3.81 cm) with the lens stowed in its upright position and weighing about 13.1 oz (371.4 g) without the batteries.

With the lens facing forward in its normal "stowed" position, the design of the front of the camera remains quite minimal. The lens itself doesn't protrude much from its barrel and the built-in flash and front side of the optical viewfinder fit snugly beside it. Beneath the lens barrel are the external flash sync socket and the diopter adjustment dial for the optical viewfinder. On the very inside of the hand grip is the DC power input jack, covered by a soft rubber flap. Interestingly enough, Nikon swayed from their usual black and red design features to an updated combination of black and purple, and a rainbow reflective logo on the front.

This shot shows the camera with the lens unit rotated to the position most people will use it in. This orientation orients the LCD panel vertically, while the lens, flash, and optical viewfinder face forward.

Looking at the top of the camera body, there's a small status display panel (helpful for conserving batteries by not using the LCD monitor), the Power/Mode dial, shutter button, a couple of function buttons and a small command dial that's used to change certain camera settings. An exceptional feature on the 990 is that the Mode and +/- buttons on the top panel also double as Function buttons, programmable through the Setup menu in Manual exposure mode to access various exposure options. This was designed specifically to allow one handed operation, as you can hold down one of the buttons with your index finger and scroll through the chosen options with the command dial. This is a nice design change from the earlier Coolpix models, which were decidedly two-handed cameras.

The majority of the controls are located on the back panel of the camera, along with the LCD monitor. The layout of the controls is, again, very similar to the preceding Coolpix models. The Monitor and Menu buttons live at the top of the LCD panel, with the zoom controls and rocker toggle button off to the right side. Beneath the LCD are several controls for macro, manual focus, flash, quality, size and a few others. When the lens is pointed frontwards, the optical viewfinder is visible from the back panel. Two LEDs located directly beside the viewfinder report the status of the autofocus and flash.

We like the bulky hand grip on the right side of the camera which enables a firm, secure hold on the camera. (We noted that this feature is somewhat larger on the 990 than the earlier 950, making for a more secure grip.) The soft rubber surface fits directly under your fingers, providing additional friction for a good grip. Located inside the hand grip are the serial and USB I/O jack (a dual interface), the video output jack, the CompactFlash compartment and an attachment for the carrying strap. The digital and video inputs live beneath a soft, flexible rubber flap that quickly and securely snaps into place. The placement of the CompactFlash slot makes it easy to change cards when mounted to a tripod and the plastic door simply flips open and snaps shut. (The sturdy design of the CompactFlash door addresses the single most frequent complaint of 950 owners: The flimsy plastic flap used to cover the memory slot on that model. There is no access light to let you know when the camera is accessing the card, so you'll have to pay attention to the LCD monitor or the small status display to know when it's OK to change cards. (It's important to never remove a memory card while the camera is writing to it, lest you corrupt your images or even damage the card.)

Finally, the flat bottom of the camera holds the battery compartment and a metal tripod mount that are unfortunately too close together to allow battery changes while on a tripod. The battery compartment has a sliding lock that keeps the door tightly shut.

Viewfinder

The Coolpix 990 offers both an optical viewfinder and an LCD monitor display. The real-image zoom viewfinder, located on the backside of the lens barrel, provides about 85 percent frame coverage according to Nikon. In our own tests, it ranged from 86 percent coverage at wide angle to 91 percent at telephoto. A center focus target helps line up shots while two LEDs beside the viewfinder indicate the status of the flash and autofocus systems. Additionally, a dioptic adjustment dial lies on the underside of the lens barrel to accommodate eyeglass wearers.

The 1.8 inch, 110,000 dot, low temperature, polysilicon TFT LCD monitor on the back panel operates both as a viewfinder and information display while in any capture mode. The LCD on the 990 is smaller than that on the earlier 950, but is higher resolution. It also sports a very high refresh rate, so images of moving objects are sharp and clear. Nikon estimates its frame coverage at 97 percent, a good deal more accurate than the optical viewfinder, which is usually the case. Our own tests showed it 97 percent accurate at wide angle, and nearly 100 percent at telephoto. When the camera is in autofocus mode, a series of targets can be continually displayed on the LCD. This shows you all the areas that the camera looks at to determine focus (in this autofocus mode, the part of the subject closest to the camera determines the focus). The LCD monitor display can be quickly called up and canceled by hitting the Monitor button just above it and we applaud the amount of exposure information that's displayed. Nearly all the settings are reported, including aperture and shutter speed (when in Manual exposure mode).

We felt the LCD screen was a minor weakness in earlier Coolpix cameras, as the unit used by Nikon was very difficult to read in sunlight. (This is true of all LCD screens, but seemed more so of the displays on the Coolpix 900 and 950.) We felt the viewscreen on the 990 was much better in this respect: It seemed to trade off a narrower usable viewing angle (you need to look at it pretty much straight on, for the best view) in favor of less tendency to wash out in very bright ambient light. The 990's LCD is also the first we've seen (February, 2000) that had an adjustment in the setup menu to control the screen's color balance, in addition to the common brightness setting. (!) We found this very interesting, perhaps useful as a way to adapt the camera's behavior to surroundings with strong tints in the ambient lighting.

As was the case with the Coolpix 950, an exceptional level of exposure information can also be displayed in Play mode. The screens at right show the three successive information screens that are accessed by rotating the command dial in playback mode. (The image in the screen shots here was deliberately underexposed using Manual capture mode, to make the information display more visible.)

Completely new in the Coolpix 990 (and very welcome!) is the histogram display shown at right. This is a feature that has been common in professional digicams for some time now, but that has seldom been seen in "prosumer" models. The graph shows the distribution of brightness values in the image, with the left edge corresponding to pure black, and the right edge to pure white. Once you learn how to read it, a histogram is phenomenally useful in determining whether you've managed a good exposure or not. There's hardly room or time here to go into histograms in full detail, but we thought it would be useful to show you two examples: In the screen shot at top, the image was deliberately underexposed. Note how the peaks in the histogram are all bunched toward the left-hand side of the graph, and how little there is going on at the right side. By contrast, the lower image was overexposed. Note how the graph is bunched against the right edge. Ideally, a well-exposed image would produce a histogram curve that just filled the graph from left to right, indicating that it contained a full range of tonal values. We really like the histogram feature, and hope other digicam makers will be motivated to include it in their cameras as well.

A final Play-mode information display is also new to the 990, showing lens, shutter and focus settings, and indicating (by the green brackets) what the autofocus system had locked onto when the picture was taken. -Another very handy way to check that you actually got the shot you were looking for!

In Play mode, the LCD can also display a thumbnail index page, showing either four or nine images to a page depending on the setting. You can cycle between single-image, four or nine image views by pressing the flash/thumbnaill button under the LCD display. You can also mark images for deletion in this mode.

There's also a playback zoom feature, which enlarges captured images up to 3x, letting you get a reasonably good idea of how well-focused the image is, check the framing, and examine details to see if you got the shot you wanted. (Did anyone blink?)

Optics

A Nikkor 3x zoom, 8 to 24mm lens comes with the camera (the equivalent of a 38 to 115 mm lens on a 35mm camera), with nine elements in eight groups (all made up of environmentally friendly glass). Aperture ranges from F/3.5 to F/9.8. New to the 990 model is the seven blade iris diaphragm, which gives very fine-grained aperture control, useful for controlling depth of field, but more so for working with external flash and precisely controlling the balance between flash and ambient exposure. The contrast-detect TTL autofocus features a 4,896 step autofocus mechanism with a working range from 0.8 inches (2.0 cm) to infinity (this includes the macro range). When shooting in the Auto exposure mode, the autofocus remains in the Continuous setting while using the LCD monitor but reverts to the Single autofocus mode when the LCD is off (which means you must halfway press the shutter button to set focus). However, the Manual capture mode gives you the freedom to choose between Continuous or Single autofocus, regardless of LCD status.

The Continuous focus mode results in the lens continually "hunting" for the best focus as you move the camera around, settling down when the camera and/or subject stops moving. Autofocus tracking speed isn't terribly high (mentioned in case you were expecting AF tracking as on Nikon's F5 pro film camera), but the continuous option would definitely be a benefit with moving subjects. The downside is that it burns more battery power.

The manual focus option is controlled through the settings menu and offers choices between a peaking scale or a distance readout (extremely beneficial in hard to focus situations). Once enabled, just press the Manual Focus button (lower left of the LCD monitor) and simultaneously turn the command dial to adjust the focus in 50 steps.

As a focus aid in manual focus mode (it can also be enabled in autofocus modes as well), the Coolpix 990 has a clever "peaking" display. This appears to be some sort of on-screen sharpening function that tends to exaggerate the current state of focus of the camera: In-focus objects look extra-sharp on the LCD when "peaking" is enabled. With textured objects, the peaking display mode produces a glimmering, moire-type effect on the display screen. We didn't test manual-focus accuracy extensively, so can't comment on just how well this works, but it is clearly a step ahead of most digicams, in which

between the Auto and Manual exposure options on the Power/Mode dial is the availability of certain functions. For example, in Auto exposure mode, the camera completely controls the exposure, from shutter speed to white balance. The Manual setting provides the full range of options mentioned above, giving you as much or as little control as you need. We'll explain the various modes here.

Program mode gives the camera control over shutter speed and aperture but lets you set the white balance, exposure compensation, etc. The Flexible Program option goes a step further by letting you select from a range of shutter speed and aperture combinations. (The camera determines the required exposure, but you can choose whether it achieves that exposure with a shorter shutter speed and wider aperture, or a longer shutter speed and smaller aperture. This strikes us as a very nice option, achieving much of what people want from Shutter or Aperture priority modes, but without limiting the camera's ability to respond to widely varying light conditions.) Shutter Priority lets you select from eight to 1/750 second shutter speeds while the camera selects the appropriate corresponding aperture. Likewise, under Aperture Priority, you can select apertures from F/3.5 to F/9.8 while the camera selects the best shutter speed. However, in Full Manual mode, the camera increases the shutter options to include a bulb setting for long exposures and a quick shutter of 1/1000 seconds, with the same aperture range as in Aperture Priority. In any mode, if the camera disagrees with your exposure choices, the shutter and aperture values will flash in the display to indicate that this may not be the best exposure option.

Exposure compensation is adjustable from -2 to +2 in 1/3 EV increments by pressing the +/- button and turning the command dial. Additionally, under the Image Adjustment option on the settings menu, you can increase or decrease contrast, lighten or darken the entire image or switch into black and white mode, giving you a few more exposure adjustment options. These tonal compensation adjustments are quite a bit more sophisticated than simple exposure compensation found in most digital cameras. Conventional exposure compensation adjustments simply allow you to adjust overall exposure up or down relative to that selected by the camera's exposure system. By contrast (no pun intended), the "lighten" and "darken" adjustments on the Coolpix 990 preferentially adjust the midtone values of the image, without affecting the white and black values of the image. (That is, "lighten" will brighten the middle brightness values in the image, without blowing-out white areas, or lightening black ones.) There are also options to adjust contrast, and capture images in black and white.

The Coolpix 990's default ISO rating is 80 but is variable when shooting in Manual exposure mode. ISO values of DEF(default), 100, 200, and Auto are available by pressing the ISO button and rotating the command dial. When shooting in the Auto exposure mode, the ISO value is left at its default setting of 80. In addition to the exposure value settings, you can adjust the in-camera sharpening to Auto, High, Normal, Low or Off under the Sharpening option of the settings menu. This is a useful feature, especially in situations where digicams tend to oversharpen such as high contrast boundaries within images. Also, we generally find that post-exposure sharpening in Photoshop(tm) or other image-manipulation program generally gives better results than the in-camera sharpening functions provided by most cameras. Thus, you may find it best to leave the in-camera image sharpening in the Coolpix 990 off for critical images, and apply unsharp masking in the computer later.

Histogram-based exposure confirmation.

We showed examples of the Coolpix 990's histogram display earlier, under our discussion of the viewfinder functions. Given that prior coverage, we'll make only brief mention here, but do want to underscore the significance of this feature. Shooters moving from the color-negative world will be accustomed to routinely favoring overexposure in their pictures, to insure optimum shadow detail. Digital cameras are quite different though, and need to be exposed more like slide film, with an eye to retaining detail in the highlights: Once the sensor hits an exposure value of 255 (in a system with 8-bit brightness values), any additional illumination has no effect, and all highlight detail is lost. It's thus very important to be able to recognize when parts of the image are being "blown out", as opposed to merely being very bright. LCD viewscreens aren't accurate enough to be trusted for this evaluation, so an explicit graph of brightness values (the histogram display) is exceptionally useful. We don't expect most casual users to routinely use the histogram exposure confirmation display on the 990, but for pros or others working with critical exposure requirements, it's indispensable.

the LCD screen has far too little resolution to be of practical use in evaluating focus.

We should note here that the 990's autofocus mechanism is quite sophisticated, with several operating modes. It has five possible focus zones (center, top, bottom, left, right), which can be very useful for achieving accurate focus on off-center subjects. The screenshots above right show the camera preferentially focusing on two objects at very different distances, based on the focus area selected. It could also take some getting used to if you're accustomed to lesser cameras with only a single focus zone. The Focus option under the settings menu does allow you to choose modes in which the camera chooses the focus zone, or in which you can explicitly set the location of the focus area (a nice feature that works well when combined with the spot metering mode, which can likewise be directed to determine exposure from the same 5 zones). In the "Auto" option for focus-area selection, the camera chooses the area corresponding to the object closest to the camera. When the area focus option is set to Off, the camera bases focus on the central area. (One playback mode displays a focus-area overlay, and shows which focus area was chosen for each image, by highlighting the appropriate set of marks in green. - This last function wasn't yet operational on our test unit.) Overall, the 990's focusing system is by far the most sophisticated we've seen on any digicam to date

The lens itself has the same filter threads as the preceding Coolpix models, which accommodate Nikkor accessory lenses for wide-angle, telephoto, macro and fisheye focal lengths. Once a lens is attached, you'll need to select the corresponding lens type in the lens settings menu, shown at right. (The camera adjusts its operation for different lens types by restricting the zoom range to avoid vignetting, switching to center-weighted metering for the fisheye adapter, etc.) A digital telephoto feature can be turned off and on through the Zoom option under the Settings menu, enlarging images up to 4x. The 990's digital zoom is different from most in that it provides a smoothly-varying range of magnifications. An indicator on the LCD monitor displays the range of digital zoom at each step (from 1.1x to 4.0x). Like this feature on most digicams, digital telephoto on the Coolpix 990 enlarges the center of the image, resulting in reduced resolution and more artifacts as more digital zoom is used. The camera automatically switches to center-weighted metering and a center autofocus target when digital zoom is active. Also under the Zoom option, you can set the startup position of the lens (either wide or telephoto) and activate the Fixed Aperture function, which keeps the aperture fixed as the lens zooms. The startup position option was another highly-requested feature among '950 users, and can really save precious seconds in fast shooting situations. Likewise, the fixed-aperture zoom option is very useful when working with external flash units, to avoid varying the exposure as a function of lens focal length.

Exposure

Sophisticated, accurate exposure control has been a hallmark of Nikon cameras, both in the film-based and digital realms. The Coolpix 990's exposure system incorporates several enhancements over that of previous models, through the addition of a 7-blade lens aperture, and a 256-element matrix white balance system. Losing no ground in the process, the 256-element matrix exposure metering system of the Coolpix 950 has been retained.

The 990 offers very flexible exposure control, with Program, Flexible Program, Aperture Priority, Shutter Priority and full Manual modes to choose from when set to the Manual exposure mode on the Power/Mode dial. Although it took a little figuring out at first (due in part to the fact that our evaluation model was a prototype and without a manual), we eventually discovered that changing modes and exposure features could be done quickly and painlessly without having to rely on the LCD monitor. The combination of the command dial and the control buttons gave complete access to most of the normal exposure functions. We also enjoyed the variety of Manual exposure mode settings. The main difference

White Balance

The Coolpix 990 offers a lot of flexibility in its white balance settings, with a matrix-based Auto setting as well as Fine (Outdoors), Incandescent, Fluorescent, Cloudy, Speedlight (flash balanced) and Preset (or Manual). We were able to get reliable results with the Auto and Fine settings, although we attempted Preset and had varying results (it's highly possible that this feature was not yet functional on our prototype test unit). Particularly interesting is the ability to "fine tune" the white balance setting in all modes except Auto or Preset. We've frequently found the various white balance options on digital cameras to produce images with an overall warm or cool color cast, depending on the manufacturer's biases, the current lighting conditions, etc. On the 990, Nikon gives you the option of tweaking the white balance to your own preferences. When you access the white balance sub-menu and select a white balance option, rotating the command dial will adjust the white balance up or down over a range of +/- 3 arbitrary units. Positive adjustments shift the color toward bluish hues, while negative adjustments move it toward warmer tones. (In the screen shot above, we've adjusted the incandescent white balance up by 2 units.)

Metering Options

The Coolpix 990 also offers several metering options, with 256 segment Matrix metering (intelligently examining 256 segments across the entire image), Center-Weighted, Spot and Spot AF Area. This last is another option that's entirely unique to the Coolpix 990 (February 2000). Taking advantage of the multi-spot autofocus capability, Spot AF Area exposure setting determines exposure based on a spot reading centered on the location designated as the autofocus target under the Focus Options menu.

Other Features

We liked the fact that you can save up to three sets of user settings for focus, exposure, and other camera options, which can be a real time saver in rapidly switching between widely different sets of options. We also greatly appreciated the programmable Function buttons, which were designed to allow one handed operation of the camera. (These normally control exposure mode and exposure compensation, but can be reprogrammed to control macro/manual focus, flash settings, white balance, or metering options.) An Auto Bracketing feature brackets five steps (two above and two below) the set exposure value while the (amazing) Best Shot Select (BSS) takes several images and allows the camera to choose only the sharpest (least blurred) to be saved. Best Shot Select makes it feasible to hand-hold the camera for surprisingly long exposures. You can also check your own work immediately as the camera gives you a quick preview of the captured image (when shooting with the LCD monitor) and gives you an option to delete or save the image (this function can be turned off through the Setup menu, under Monitor Options).

Flash Exposure

The Coolpix 990's built-in five mode flash (Auto, On, Off, Red-Eye Reduction and Slow-Sync settings) gives you a lot of flexibility: Through the settings menu, you can adjust the flash power from -2 to +2 EV units (!), as well as completely deactivate it. The Slow-Sync option is useful when shooting subjects with dark backgrounds (such as night scenes) because the camera actually leaves the shutter open longer and then fires the flash before the shutter closes. This lets a good amount of ambient light in and can be used to get a nice motion-blur effect. The "Red-Eye Reduction" mode fires a pre-flash before the main exposure, to try to get people's eyes to "stop down", reducing the internal reflection from the back of their eyeballs. Unfortunately, this is one of the real weaknesses of the 990's flash system (and the 950 too): The flash tube is so close to the lens (as seen in the photo above) that there's essentially no way you aren't going to end up getting red-eye, regardless of how much you get people's pupils to constrict. While an external flash will avoid this, it's a shame to need one to achieve good results on basic

people-pictures. Keep in mind that the flash is automatically switched off when shooting in the Infinity focus mode; the Continuous, 16 Shots or VGA Sequence modes; when using the Best Shot Selector; using a lens converter; or when the AE Lock option is on. An external sync socket means you can connect a more powerful external flash, and the camera allows both external and internal flashes to work together. (The socket connects to Nikon Speedlight models SB-28, 28DX, 26, 25, 24 and 22.) If the 990's internal flash is anything like that of its predecessors', we should be extremely pleased with its performance. One puzzling note: The preliminary documentation we received from Nikon was self-contradictory, in it stated the flash's range as 2 meters (6.6 feet) in telephoto mode, but also gave it a guide number rating of 9/30 (m/ft). In our own tests, the flash worked fine out to a distance of 14 feet, the limit imposed by the dimensions of our test studio.

Continuous Shooting Mode

The Coolpix 990 offers several "motor drive" rapid-exposure modes for capturing quick sequences of images. Our information here is a little sketchy, as the modes on the prototype unit we tested didn't match those in the (equally prototype) documentation we received. Production cameras may behave quite differently than our prototype unit did. Our understanding of the production features is listed in the table at the end of this review section. The documentation showed five modes (Continuous, Multi-Shot 16, Ultra High-Speed Continuous, VGA Sequence and Movie), all selectable under the Continuous option of the settings menu. Our test unit didn't have the Ultra High-Speed setting, but had instead an option named "9 Shot Frame". (We're told that the 9 Shot Frame function may not be on the production cameras.) Several of the Continuous-mode options on our test unit appeared to be mis-labeled, so we'll just describe them using the names from the documentation, ignoring the spurious "9 Shot Frame" label.

The Continuous mode captures frames very quickly, at whatever resolution and image quality the user has selected. We measured continuous-mode frame rates at approximately 1.0 frames per second at full resolution (3 frames maximum in a sequence), 1.62 frames per second for a maximum of 8 frames at XGA resolution, and 1.72 frames per second for a maximum of 21 frames in VGA mode. We're not sure where the 9 Shot Frame mode's name came from: Probably due to a firmware bug, it actually did what we expected the Multi-Shot 16 mode to do: It subdivided the image area into 16 sections and captured a "mini-movie" of small images (400 x 300 resolution), which filled-in a 4x4 array within a single high-resolution image as the shooting progressed, at a rate of 2.0 frames per second on our prototype unit. The mode labeled "Multi-Shot 16" on our test unit actually captured a **long** series of VGA-resolution images at 1.76 frames per second. Depending on the subject characteristics (e.g., how well it would JPEG-compress), it captured 40-50 pictures at a time. (We imagine this will be the production "VGA Sequence" mode.)

The VGA Sequence captures a sequence of VGA-resolution frames, stored as separate files on the CF card, also at a very quick rate. (Maximum sequence length and capture speed are dependent on image information and available CF card space.) New to the 990 is the Ultra High-Speed Continuous mode, which captures approximately 30 frames per second, totaling about 80 QVGA-sized images (320x240 pixels). Finally, the Movie mode is another new feature for the 990 model. Movie mode captures up to 40 seconds of moving images without sound at approximately 15 frames per second (QVGA size). Movie mode worked quite well on our prototype model, especially when combined with the swiveling lens design (we could run the camera and swivel the lens back on ourselves to get into the picture).

Shutter Lag/Cycle Times

When you press the shutter release on a camera, there's usually a lag time before the shutter actually fires. This time is to allow the autofocus and autoexposure mechanisms time to do their work, and can amount to a fairly long delay in some situations. Since this number is almost never reported on, and can significantly affect the picture taking experience, we now routinely measure it, using an electronic test system accurate to 0.01 seconds.

The Coolpix 990 autofocus speed is about average, compared to other digicams we've tested (January, 2000), with a shutter lag of 1.13 seconds in full autofocus mode, 0.18 seconds when the lens is

prefocused by half-pressing the shutter button, and 0.49 seconds in manual-focus mode. NOTE: Reader Bryan Biggers wrote in to report that a number of 990 owners have consistently measured shutter lag times of under 0.1 seconds in manual-focus mode. Unfortunately, we had already sent our test unit back to Nikon by the time we heard this, so couldn't repeat the test. We're pretty confident of our result though, since we (a) use an electronic test system that really couldn't produce an error of that magnitude, and (b) repeated this particular test several times, since we ourselves were surprised that the manual-focus delay was so long. We stand behind the number we measured, but given Bryan and others' experience, it's entirely possible that a modification was made in later production units. We tested a production model, but obviously one of the first off the line. A firmware change could easily account for this discrepancy. Thanks for the note, Bryan!

Shot to shot cycle time is very good though, at only 1.7 seconds for the first two shots in highest-quality JPEG mode, at which point the buffer memory is full and you have to wait something on the order of 7 seconds or so for it to empty. Lower resolutions increase the number of shots you can take in quick succession, and reduce the amount of time you need to wait for the buffer to clear again. At XGA resolution, you can shoot 7 frames at 1.62 second intervals, after which the next two frames will require 3 seconds each. If you continue shooting at maximum speed, the cycle time will alternate between 1.65 and 3.0 seconds indefinitely. We never found a maximum number of frames that filled the buffer in VGA mode, but it's something over 20. Cycle time in VGA mode was 1.65 seconds. (Note that all these cycle times were measured in manual focus mode: Autofocus mode would add about 0.6 seconds to the cycle times, to allow for focus-system operation.

Frame rates in continuous mode also varied as a function of resolution (albeit only slightly), as did the number of exposures we could capture before waiting for the buffer to empty. In high resolution mode, we could capture 3 frames at roughly 1 frame per second. At XGA resolution, we captured 8 frames at 1.62 frames per second. At VGA resolution, we captured 21 frames at 1.72 frames per second. The "VGA Sequence" option captured 40 frames at a rate of 1.76 frames per second. The 16-shot mode captured 16 quarter-resolution frames at a frame rate of 2.0 fps. Ultra high speed mode captured 80 320 x 240 frames at 30 fps (saving the results as individual image files in memory), while the Movie mode also captured 320x240 frames at 30 fps, with the resulting motion sequence saved in a single MOV file. The table below summarizes our cycle-time measurements:

Capture Mode	Interval/ fps	No. of frames
Single-shot, 2048x1536	1.76 sec	2
Single-shot, 1024x768	1.62 sec	7
Single-shot, 640x480	1.65 sec	>20
Continuous Mode, 2048x1536	1.0 fps	3
Continuous Mode, 1024x768	1.62 fps	8
Continuous Mode, 640x480	1.72 fps	21
VGA Sequence	1.76 fps	40
16-Shot Mode (512x328)	2.0 fps	16
Ultra High-Speed Mode (320x240)	30 fps	80
Movie Mode	30 fps	40 secs (w/incl 16MB card)

Operation and User Interface

As with the previous 950 model, we greatly appreciated the ease of the user interface on the Coolpix 990. The 950's interface was great, but the 990 goes quite a bit beyond it, making for what we feel is the best user experience in the industry. The LCD menu system is available for novices, or for less commonly-used controls, but experienced users will find they can make virtually all the most necessary adjustments without resorting to the LCD screen. Once you learn where the functions are, operation is quick and intuitive, thanks to the multiple control buttons and the excellent use Nikon makes of the black/white LCD readout. The inclusion of programmable Function keys simplifies operation even more, letting you assign common combinations of settings to a single key. Exposure compensation, exposure mode, ISO value, image quality and size, as well as focus controls (manual focus setting, macro, and infinity focus) and flash mode, can all be adjusted without the LCD. The small topside status display panel provides feedback for all these settings in a very clear fashion. When you do have to delve into the (very extensive) LCD menu system, navigation via the rocker toggle is easy, intuitive, and very rapid. In Record mode, the menu system is split into 3 pages of options(!), and a nice touch is the tabbed interface, by which you can jump between pages with only a few clicks of the rocker toggle, rather than having to scroll through every option to get to one buried on the second or third screen. Most of the camera's functions are controlled by a combination of hitting a button and turning the command dial. Functions that are accessed in this manner are delineated on the camera body with a very light purple lettering. This system makes it extremely fast and efficient to change settings without eating up too much battery power by using the LCD menu system. Control layout is also very logical, allowing one-handed operation for commonly-changed functions, requiring a two-handed approach only for manual focus setting, ISO, flash mode, and size/quality adjustment.

Control Enumeration

LCD Data Readout: Located on top of the camera, this readout displays status of a wide range of camera functions. More importantly, as noted above, you can manipulate and set most of these functions by using the camera controls and readout display together, letting you avoid the LCD menu system. This both saves power, and makes the camera functions much faster to navigate.

Shutter Button: Located on top of the camera and encircled by the Power/Mode dial, this button sets focus and exposure when halfway pressed and fires the shutter when fully pressed.

Power/Mode Dial: Also located on the top panel of the camera, surrounding the shutter button, this dial selects between Off, Auto Record, Manual Record and Play modes.

Mode/Func.1 Button: Located on the top panel, this button selects the exposure system mode (Program,

Flexible Program, Shutter Priority, Aperture Priority and Manual) when held down while turning the command dial with the camera in Manual record mode. This button can also be programmed through the Setup menu to access various exposure functions with a single button actuation.

+/- Func.2 Button: Located directly to the right of the Mode button, this adjusts the amount of exposure compensation (from -2 to +2 EV in 1/3 EV steps) when held down while turning the command dial. This button can also be programmed through the Setup menu to access various exposure functions.

Command Dial: Located on the top right of the camera, this dial is used in conjunction with various controls in Record mode to adjust exposure options. In Play mode, the dial cycles through the five information pages associated with each captured image, giving the user an unparalleled amount of information about the exposure (image information page, camera firmware page, image adjustment page, exposure histogram and focus confirmation).

Monitor Button: Located on the top of the rear panel of the camera, this button recalls or cancels the color LCD screen information display and viewfinder.

Menu Button: Located directly to the right of the Monitor button, this button pulls up the settings menu in all capture modes as well as in Play mode. Pressing it again cancels the menu.

W and T Buttons: Located further to the right from the Menu button, these buttons control the optical zoom in all capture modes. Likewise, when the digital telephoto option is enabled, these buttons control the amount of digital zoom (from 1.1x to 4.0x). In single-image playback mode, pressing the "T" button repeatedly zooms in on the image (you can scroll around in the zoomed image by using the rocker toggle control). Pressing the "W" button cancels zoomed playback.

Rocker Toggle Control: Located on the right side of the LCD monitor, this button features four arrows that allow the user to navigate through the LCD menu system and make selections in Record and Play modes. We found menu navigation on the Coolpix 990 particularly straightforward, in that all menu actions are taken via the rocker toggle: There's no need to confirm a selection by pressing a different

button. Different menu items are selected via the up/down arrows on the toggle control. Pressing the right arrow selects that item, generally taking you into a sub-menu. Pressing the left arrow takes you back out again. Once in a sub-menu, the up/down arrows again step between items, while a right-arrow selects. This process continues until you arrive at the final point of selection, upon which another right-arrow actuation makes that selection and returns you to the main menu. We were also pleased to see that we could left-arrow from the initial screen, to go to a set of tabs that let you quickly jump from menu screen one to two, or to the setup screen very quickly, without scrolling through all the menu entries first. All this takes much longer to describe than do: The 990's menu design and use of the rocker toggle made it by far the quickest system to navigate we've seen yet.

In Play mode, the right and left buttons scroll through captured images one at a time. As noted above, in zoomed playback mode, this control lets you scroll around within the enlarged image.

Manual Focus/Macro Button: Located directly beneath the LCD display, on the left side, this button has several functions. When held down while turning the command dial, this button controls the manual focus option in Record mode. Also in Record mode, this button (when pressed on its own) cycles through Infinity focus, Macro and Self-Timer modes. In Play mode, this button acts as the Delete command for the currently displayed image (designated by the trash can symbol). In a welcome addition, Macro and Self-Timer modes can be used at the same time, even though they're controlled by the same button. (As you cycle through the modes accessible with this button, one mode has both macro and the self-timer enabled simultaneously.)

Flash/ISO Button: Centered under the LCD panel, this button cycles through the flash modes (Auto, On, Off, Red-Eye Reduction and Slow-Sync). In Manual Record mode, this button cycles through the variable ISO settings (Auto, 100, 200 and dEF). In Play mode, this button pulls up a four or nine image index display of all captured images.

Quality/Size Button: Located directly to the right of the Flash button, this button cycles between image quality options (Basic, Normal, Fine and Hi) in all record modes. In any record mode, this button also cycles through the image size settings (3:2 2048 x 1360, VGA 640 x 480, XGA 1024 x 768 and 2048 x 1536) when held down while turning the command dial. In playback mode, if the currently-selected picture is a movie sequence, this button initiates playback of it.

Dioptic Adjustment Dial: Located directly beneath the optical viewfinder (on the underside of the lens half of the case), this small, black dial adjusts the viewfinder to accommodate eyeglass wearers.

Camera Modes and Menus

Automatic Record Mode: Accessed by turning the Power/Mode dial to the "A" setting, this mode puts the camera in charge of exposure and focus, but still leaves settings like flash, exposure compensation, size, quality and the self-timer under the user's control. Pressing the Menu button in this mode pulls up the following Setup menu:

- **Folders:** pulls up a sub-menu that allows users to create, delete and rename image storage folders in separate groups (much like the 950). This also allows users to select which folder images will be saved to.
- **Monitor Options:** pulls up a sub-menu that allows users to adjust the brightness and hue of the LCD monitor display.
- **Shutter Sound:** turns the shutter sound on or off.
- **Auto Off:** allows users to set the auto-off delay to 30 seconds, one minute, five minutes or 30 minutes.
- **Seq. Numbers:** turns the file numbering sequence on or off as well as resets the current sequence.
- **Card Format:** Formats the CompactFlash card and erases all folders and images.
- **Date:** sets the camera's internal date and time.

Manual Record Mode: Accessed by turning the Power/Mode dial to the "M" setting, this mode offers several options for manually controlling exposure (Program, Flexible Program, Aperture Priority, Shutter Priority and Manual). Program puts the camera in charge of aperture and shutter speed, while the user can control things like white balance, motor drive, etc. Flexible does the same, but allows the user to select between various combinations of shutter speed and aperture settings. Aperture and Shutter Priority put the user in charge of either the aperture or shutter speed while the camera controls the other value. And finally, Manual lets the user control both aperture and shutter speed, independent of the camera's exposure system. All of these capture modes are accessible by pressing the Mode button and turning the command dial until the desired mode appears on the status display. Pressing the Menu button in this mode pulls up the following settings menus:

Screen One

- **White Balance:** pulls up a sub-menu with seven white balance options: Auto, White Balance Preset, Fine (Outdoors), Incandescent, Fluorescent, Cloudy and Speedlight (flash balanced).
- **Metering:** offers 256 Segment Matrix, Center-Weighted, Spot and Spot AF Area metering options.
- **Continuous:** offers six "motor-drive" options: Single exposure, Continuous Shooting, Multi-Shot 16, VGA Sequence, Ultra-High Speed, and Movie.
- **BSS:** turns the Best Shot Selector function on or off.
- **Lens:** lets the user select between Normal (built-in lens), Wide Adapter, Telephoto 1 (a 2x adapter), Telephoto 2 (a 3x adapter), Fisheye 1 and Fisheye 2 options to accommodate the specified accessory lens. As noted in the main review, the different options adjust various exposure and zoom setting options to best accommodate the chosen lens.
- **Image Adjust:** allows the user to further alter the image with options of Auto, Normal, More Contrast, Less Contrast, Lighten Image, Darken Image and Black & White. (See discussion under Exposure section of the review, above.)
- **Image Sharpening:** adjusts the in-camera sharpening to Auto, High, Normal, Low or Off.)

Screen Two

- **User Setting:** allows the user to save up to three different sets of user settings to be recalled at any given time (useful for quickly switching between groups of settings for different shooting scenarios).
- **Exposure Options:** allows the user to turn the AE Lock and Auto Bracketing on or off as well as adjust the exposure compensation. (While exposure compensation can be set from this menu entry, you would more commonly do so via the top-panel +/- button and function wheel.)
- **Focus Options:** selects between AF Area Modes (Auto, tracking/manual/center, or off), Autofocus Modes (Continuous or Single AF), Peaking (On, Off, Manual Focus only), and Distance Units (feet/meters) focusing modes.
- **Zoom Options:** allows the user to activate the digital telephoto, designate the startup position (wide, telephoto, or the last-used position, a feature we found particularly welcome). Also lets you select the Fixed Aperture option, which keeps the aperture fixed as the lens zooms. (This last useful for flash photography, with external strobe units.)
- **Speedlight Option:** allows the user to adjust the flash intensity (+/- 2EV unit range in 1/3 EV steps) and set up the internal and/or external speedlight options (both active or internal flash off).
- **Reset All:** resets all the menu options to factory defaults (it thankfully does give you an option to back out if you decide you want to).

Setup Screen

- **Folders:** pulls up a sub-menu that lets users create, delete and rename image storage folders in separate groups (much like the 950). This also lets users select which folder images will be saved to.
- **Monitor Options:** pulls up a sub-menu that allows users to adjust the brightness and hue of the LCD monitor display.
- **Shutter Sound:** turns the shutter sound on or off.
- **Controls:** allows the user to program the Function 1 and 2 buttons (Mode and +/- buttons) to set up specific exposure functions. (VERY handy!)
- **Auto Off:** allows users to set the auto-off delay to 30 seconds, one minute, five minutes or 30 minutes.
- **Seq. Numbers:** turns the file numbering sequence option on or off as well as resets the current sequence.
- **Card Format:** Formats the CompactFlash card and erases all folders and images.
- **LED Shot Confirm:** turns the shot confirmation light on and off. (This is a small orange LED on the front of the lens housing that illuminates briefly after the shutter trips, as an indication that the shot has been taken. Useful for self-timer shots taken without flash.)
- **Date:** sets the camera's internal date and time.
- **Video Mode:** sets the video format to NTSC or PAL.
- **Language:** sets the camera language to German, English, French or Japanese.

Play Mode: Accessed by turning the Power/Mode dial to the Play position, this mode allows users to view captured images and movies. The right and left arrow buttons scroll through images while the Delete and Index Display buttons (beneath the LCD panel) offer quick image deletion and display. Pressing the Menu button in this mode pulls up the Play settings menu:

Screen One

- **Delete:** lets the user delete a Selected Image, All Images, Erase Folder or Print Set. (A "Print Set" refers to the set of images currently marked for printing, using the DPOF (Digital Print Order Format))
- **Folders:** allows the user to create, delete or rename folders as well as select the playback folder from a list.
- **Slide Show:** starts a slide show playback of all images in a folder and allows the user to set the frame interval.
- **Protect:** allows the user to select individual images for write protection.
- **Hide Image:** allows users to hide selected images from view.
- **Print Set:** allows users to select individual images and mark them on the memory card for subsequent printing by a standalone printer. (This uses the standard Digital Print Order Format (DPOF) protocol.)

Setup Screen

- **Monitor Options:** pulls up a sub-menu that allows users to adjust the brightness and hue of the LCD monitor display.
- **Shutter Sound:** turns the shutter sound on or off.
- **Auto Off:** allows users to set the auto-off delay to 30 seconds, one minute, five minutes or 30 minutes.
- **Seq. Numbers:** turns the file numbering sequence option on or off as well as resets the current sequence.
- **CF Card Format:** Formats the CompactFlash card and erases all folders and images.
- **LED Shot Confirm:** turns the shot confirmation function on and off.
- **Date:** sets the camera's internal date and time.
- **Video Out:** sets the video format to NTSC or PAL.
- **Language:** sets the camera language to German, English, French or Japanese.

Image Storage and Interface

Like the 950 and the 900 before it, the Coolpix 990 uses CompactFlash memory cards for image storage, shipping with a 16 MB card. We suspect that most users will almost immediately want to purchase a larger card though, as 64 MB cards have become quite reasonable in price, and cards as large as 128 MB are currently available (February, 2000). We were glad to find the new location of the CompactFlash slot in the hand grip (the 950 model's slot was on the bottom of the camera, making it difficult to change cards while mounted to a tripod). The 990 also has a very nice, functional cover door for the CF card slot, a huge improvement over the 950's less-substantial arrangement.) The 990 includes several subtle niceties that make life a little easier, including a folder arrangement that allows users to organize images in the camera, a sequential frame counter option to avoid problems with overwriting files when copying them to your computer, some powerful in-camera tonal adjustment controls and the much appreciated Best Shot Selector option that automatically chooses the least blurry image, when shooting under difficult conditions.

Captured images can be individually write protected through the Play mode settings menu. Write protected files are only immune to accidental deletion, not card reformatting. File formats include several levels of compressed JPEG files as well as an uncompressed TIFF mode (Hi quality setting).

<i>Resolution/Quality vs Image Capacity</i> (Included 16MB card)	Full Resolution		XGA Resolution		VGA Resolution	
	Images	Approx. Compression	Images	Approx. Compression	Images	Approx. Compression
Uncompressed	1	1:1	-	-	-	-
Fine Quality	10	6:1	40	6:1	100	6:1
Normal Quality	20	12:1	79	12:1	187	12:1
Basic Quality	40	20:1	150	20:1	332	20:1

Video Out

One significant difference between the Coolpix 990 and its predecessors is that there now appears to be only a single international version of the camera, supporting either NTSC or PAL standards. The US version of the Coolpix 990 includes a video out jack and connection cable, defaulting NTSC-formatted video output. European models will doubtless support PAL timing and connections. You can switch between NTSC or PAL timing through a setting in the Setup menu. Connecting the video output provides a signal to an external device, without disabling the internal LCD display screen. All images that would normally appear on the LCD are also routed to the external video display so that the television screen becomes an enlarged version of the LCD monitor and can be used both for image playback and composition.

Power

The Coolpix 990 runs on four AA batteries, housed inside the hand grip, or an external AC adapter which plugs into the front of the camera. Nikon estimates about 1.5 hours of operating time when using the LCD monitor and four 1.5V LR6 (alkaline AA L40) batteries at a normal temperature of 68 degrees Fahrenheit. (We find this a trifle optimistic.) In our own tests, the Coolpix 990 prototype consumed about as much power as typical 2 megapixel digicams, despite the larger sensor and large SDRAM buffer memory. As always, we highly recommend keeping a couple sets of freshly charged rechargeable NiMH cells nearby. We should note here that the ability to switch the autofocus mode from Continuous to Single saves significant battery power. Enormous power savings are possible if you leave the LCD monitor off, and rely on the small top-panel readout when adjusting camera settings. Power consumption with the LCD screen turned off was very low indeed: You could easily run all day on a single set of batteries in this mode.

Operating Mode	Power Drain
Capture Mode, w/LCD	580 mA
Capture Mode, no LCD	< 10 mA
Half-pressed shutter w/LCD	570 mA
Half-pressed w/o LCD	340 mA
Capture Mode, Continuous AF	640 mA
Memory Write (transient)	580 mA
Flash Recharge (transient)	1000 mA
Image Playback	370 mA

Included Software

As of this writing, Nikon had not yet finalized the software bundle for the 990. We'll update accordingly as the information becomes available.

Test Results

In keeping with our standard policy, our comments here are rather condensed, summarizing our key findings: For a full commentary on each of the test images, see the [Coolpix 990's "pictures" page](#).

As with all Imaging Resource camera tests, we encourage you to let your own eyes be the judge of how well the devices performed: Explore the images on the [pictures page](#), to see how well the Coolpix 990 performed, and how its images compare to other cameras you may be considering buying.

The first thing that struck us about the Coolpix 990 was how **sharp** its pictures were! The earlier Coolpix 950 showed excellent sharpness and detail, but the 990 clearly raises this performance to a new level. Resolution was the best we've seen out of the digicams we've tested to date (early March, 2000), although in fairness, we have a number of 3 megapixel models yet to go. We "called" the 990's resolution at 800-850 lines per picture height in both horizontal and vertical directions, with significant detail visible all the way out to 900-1000 lines. By comparison, the 950 tested out at about 800 lines horizontally (and a bit of a stretch at that), and 650-700 vertically. Overall, a significant step up in resolution, much more than we saw in digicams when going from the 1.5 to 2.1 megapixel level. (These numbers were obtained with the lens at its wide angle setting: Telephoto numbers were slightly lower, as is usually the case.)

Color was very good as well, with excellent saturation across the spectrum. The only weaknesses we could find were a slight tendency to undersaturation in bright yellow hues, and the (very common) problem with the tricky blues in the model's pants and flowers in the outdoor shots. (For whatever reason, many digicams tend to produce rather purplish hues in these colors, and the 990 fell prey to that tendency somewhat as well.) Overall color was very good though.

True to its heritage from Nikon's high-end film cameras, exposure accuracy and control were excellent in the 990. Nikon's apparently added a matrix-evaluating white balance function to the 990, making its auto white balance algorithm a bit more sure-footed. For really tough lighting situations though, we still found ourselves using the manual preset white balance option, a feature we **really** like to see in digicams we test. (Note to other high-end digicam manufacturers: This is a "must-have" feature for high-end prosumer cameras!) The addition of a true iris-based aperture in the 990 was a significant improvement over the 950's three-aperture system, and very welcome.

In our low-light tests, the Coolpix 990 did exceptionally well, producing usable but dark images in light levels as low as 1/16 of a foot-candle, and very usable ones at levels of 1/8 of a foot-candle. Noise was

also quite low (camera was stabilized at a temperature of 70 degrees F (~21C) for these shots). For comparison, a well-lit city scene under typical modern street lighting corresponds to a level of about 1 foot-candle. The Coolpix 990 is a great low-light shooter!

As is the case with most digicams, the Coolpix 990's optical viewfinder shows less of the subject than the final image does, displaying a fairly typical 86% of the final area in wide angle and 88% in telephoto mode. The LCD viewfinder was almost 100% accurate though, a very welcome feature for shots involving critical framing (as so many of our test shots do).

Like the '950 before it, the Coolpix 990 is a spectacular macro performer, with a minimum area coverage of only 0.78 x 0.58 inches (19.69 x 14.77 mm). Combined with the 990's 3 megapixel resolution, the detail it can record is literally microscopic!

At the bottom line, the Coolpix 990 delivers a solid upgrade in image quality and resolution relative to the already-excellent Coolpix 950, with some of the best detail and sharpness we've seen yet in a digicam. (At least, as of early March, 2000.)

Conclusion

The Coolpix 990 is an exceptional follow-on to the already excellent Coolpix 950. The list of added features, options, and capabilities is too long to include in a brief conclusion, but suffice to say they're both extensive and eminently useful. Virtually every aspect of the camera's performance has been enhanced or extended, and the result is a true 3 megapixel powerhouse. Despite its incredible array of features though, its fully-automatic Auto record mode makes it easy enough for even the rankest amateur to use. (Set it in "Auto" mode, and hand it to your spouse with no worries or explanations.) For power users, the 990 sports one of the best-designed user interfaces we've had the pleasure to work with. Nikon clearly listened to users of the Coolpix 900 and 950 in developing the 990, and the results show: We're confident in predicting that this will be a very popular digicam, among both amateurs and professionals!

Reader Comments!

See what other Imaging Resource readers have had to say about the Coolpix 990, or add comments of your own. (*Read what's here, then add your own!*)

For even more feedback, read the [User Reviews from PCPhotoREVIEW](#)

Reader Sample Images!

Do you have a Nikon Coolpix 990 camera? If you'll post an album of your samples that we can point to with a single URL (not all services permit this, some require you visit the main site and type a name and password) and email us at web@imaging-resource.com, we'll list the album here for others to see!

ASSIGNMENT

III

UNITED STATES PATENT APPLICATIONS

NOT IN VIEW OF DECISION OF EXAM UTILITY APPLICATIONS BASED ON PRIOR PROVISIONAL CASES.

WHEREAS, Brian Utley, an individual, having a place of business at One Boca Place, 2255 Glades Road Suite 337 West Boca Raton, FL 33431-7360 ("ASSIGNOR"), is the owner of the pending United States patent applications identified in Exhibit A attached hereto and by this reference incorporated herein ("Applications"); and

WHEREAS, Iviewit.com, Inc. ("Assignee") is a corporation organized and existing under the laws of the State of Delaware, having a principal place of business at 505 North Brand Boulevard, Suite 1420, Glendale, California 91201 ("ASSIGNEE") desires to acquire from ASSIGNOR his entire right, title and interest in and to the Applications; and

09/13/01

WHEREAS, ASSIGNOR is willing to assign to ASSIGNEE his entire rights, title and interests in and to the Applications;

NOW, THEREFORE, for good and valuable consideration, the receipt and adequacy of which are hereby acknowledged by ASSIGNOR by these presents does hereby sell, assign, convey and transfer to ASSIGNEE, its successors, assigns and legal representatives, his full and entire right, title and interests in and to the Applications, and the invention disclosed and claimed therein, and any continuations, continuations-in-part and divisional applications thereof (said applications to be included within the meaning of the term "Applications" as used herein), and any patents which may be granted on the Applications (or any of them, "Future Patents"), and any reissue applications pertaining to any of the Future Patents, and any reissued Future Patents granted on such reissue applications, and any continuations of any of the Future Patents or reissues thereof, the same to be held used, enjoyed by ASSIGNEE for its own use and enjoyment and for the use and enjoyment of its successors, assigns, and legal representatives, to the end of the term for which the Future Patents are or may be granted or reissued. The foregoing assignment is to be for any and all causes of actions and claims for damages by reason of infringement of the Applications, or any of them, which causes of action and claims arose prior to the date of execution hereof, together with the right to sue for and collect the same for ASSIGNEE's own use, benefit and enjoyment, and for the use, benefit and enjoyment of its successors, assigns and legal representatives.

ASSIGNOR hereby represents and warrants that, except as it may have otherwise disclosed to ASSIGNEE, (i) he is the sole owner of the Applications and the inventions disclosed and claimed therein; (ii) the Applications were not filed fraudulently or contrary to any provision of the patent laws of the United States; (iii) he has granted no licenses to any other party to use the inventions claimed in the Applications identified in Exhibit A hereto; (iv) he is not aware of any third party who has asserted a claim of any ownership right, title or interest in the Applications, or the inventions disclosed and claimed therein, or any other rights or interests therein which are adverse to those of ASSIGNOR; and (v) he is not a party to any prior agreement, nor has he made any informal commitment or reached any understanding, with any

other person or legal entity relating to the Applications which would be breached or otherwise violated by the foregoing assignment of the Applications to ASSIGNEE. In this connection, ASSIGNOR states that he makes no other representations or warranties of any kind whatsoever, expressed or implied, other than specifically set forth hereinabove.

ASSIGNOR hereby agrees that ASSIGNEE shall have the right to record this instrument of assignment in the United States Patent and Trademark Office, so as to establish ASSIGNEE as owner of record of the Applications, and the inventions disclosed and claimed therein, as the owner thereof in the United States.

ASSIGNOR further agrees, at the request of ASSIGNEE and without charge or cost to ASSIGNEE, to (i) execute and by electronic filing and all other documents of any kind whatsoever, and to provide whatever information may be required, to carry out the terms and intent of this Assignment and fully cooperate with ASSIGNEE, as reasonably required, to enable ASSIGNEE to file and this instrument of assignment with the United States Patent and Trademark Office, so that ASSIGNEE's ownership of the Applications, and the inventions disclosed and claimed therein, is duly made of record in the United States.

IN WITNESS WHEREOF, ASSIGNOR has caused this instrument to be executed on the date indicated below.

EXHIBIT H
US PATENT 60/233,344

1 training that you've had or maybe you -- you did 113

2 indicate that you had any degree in mathematics.

3 Is that something that you have some experience

4 from from some other portion of your employment

5 or background?

6 A. I have training and experience in

7 mathematics.

8 Q. I'm sorry.

9 A. I say I have training and experience

10 in mathematics.

11 Q. How about in the scaling video

12 invention; is that part of what you've already

13 described?

14 A. That is readily derived from a

15 mathematical background.

16 Q. How about the remote control video

17 applications?

18 A. That's different.

19 Q. Okay. Now going back to --

20 A. What --

21 Q. -- the patent dealing specifically

22 with remote control applications.

23 A. What I did there was I established

24 the fact that the design point that Eliot had

25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Eliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

1 Q. Okay. And the correlation was for 115
2 development of future cameras or was that simply
3 an observation that was made?

4 A. It was an observation that current
5 camera technology incorporates zoom and pan
6 technology.

7 Q. Okay. How about any patent or
8 patent applications dealing with scales video or
9 zoom video imaging applications other than what
10 we've already discussed?

11 A. Without looking, and I apologize for
12 this, without looking at the specific patent
13 filings by name and number, I think, you know,
14 we're not really going to be able to get much
15 further on this discussion.

16 Q. Okay.

17 A. I don't want to put you off at all,
18 but I just want to say that to pursue a detailed
19 questioning in this specific area, I need to be
20 able to refresh my mind with what is in the
21 record.

22 Q. Okay. And are those documents that
23 you have in your possession someplace?

24 A. No.

25 Q. You don't have any of the paperwork

TRANSMITTAL

Assistant Commissioner for Patents
Box PROVISIONAL PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(c) is the provisional patent application of:

Brian G. Utley
1930 S.W. 8th Street
Boca Raton, Florida 33486

Eliot I. Bernstein
500 S.E. Mizner Boulevard
Boca Raton, Florida 33432-6080

eliot	3/19/2004 10:39:02 PM
Note	No signature for Eliot is in the files and BSZT states in portfolio that it is only Utley. There is no stamps from patent office or other proof this is legit. Was not in the Company files until Foley to BSZT transfer.

Enclosed are:

- [X] Specification, Claim(s), Abstract, and Figures (95 pages).
-  [] Assignment of the invention to lviewit.com, Inc.
-  [] Small Entity statement.

eliot	3/19/2004 10:40:42 PM
Line	Assignment never filed and small entity never filed.

The filing fee is calculated below:

	Rate	Fee Totals
Basic Fee	\$150.00	\$150.00
[X] Small Entity Fees Apply (subtract 1/2 of above):	=	\$75.00
TOTAL FILING FEE: =		\$75.00

- [] A check in the amount of \$75.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

Date 9/18/00

Re: Transfer of IP files for IVIEWIT.COM

Dear Mr. Meltzer:

As you may recall, I am the patent attorney at Foley & Lardner that is currently handling the Iviewit.com IP matters that were previously handled by Ray Joao of your firm.

I recently received the following correspondence from your firm: (1) the original Assignment recorded in the United States Patent and Trademark Office (USPTO) for your Docket No. 5865-8 (U.S. Provisional Patent Application No. 60/169,559); and (2) the USPTO Filing Receipt (copy attached) for your Docket No. 5865-1 for Application No. 09/522,721. Although I sincerely appreciate your firm's diligence in continuing to forward Iviewit materials to me, this latest correspondence raises some very serious issues with respect to the Iviewit.com IP matters that were supposed to have been transferred to Foley & Lardner.

I was not previously told about this U.S. Non-Provisional Application being filed (item 2 above). It does not appear in any of the correspondence previously sent to Foley & Lardner. This raises the question of exactly what was filed in the U.S. Patent and Trademark Office, since I do not have a copy of any filing papers for this application. Was a U.S. Declaration filed? What specification and claims were filed? Was an Assignment filed for this application? I must have this information in order to take over prosecution of this application.

More importantly, however, this raises the question of whether any other provisional or non-provisional applications have been filed in the United States or any other country. Both the client, Brian Utley, President of Iviewit.com, and myself have previously asked your firm to transfer all of the Iviewit.com Intellectual Property files to me. (See attached letter to you dated April 28, 2000.) When the files that were sent to me were incomplete, I sent an e-mail (copy attached) to Dawn Laffin of your firm, asking her to look for other Iviewit matters. I subsequently requested that Nicole, Ray's former secretary,

FOLEY & LARDNER

Mr. Lewis S. Meltzer
June 6, 2000
Page 2

double-check that there were no other miscellaneous files that were not on the list of applications (also attached). Now I find out that, after three or four separate requests, all of the Iviewit patent matters were not transferred to us.

I formally request that you have your firm's Docket Administration Department review all of Ray Joao's files to ensure that all of the Iviewit.com materials have been transferred to me. Please forward all letters, memorandums, faxes, e-mails, notes, CD's, disks, and other correspondence between Iviewit.com and your firm, and between any third parties and your firm on behalf of Iviewit.com. It is particularly important that I know which patent applications were filed and what correspondence was submitted to the U.S. Patent & Trademark Office before the expiration of a critical date. Otherwise, the client could possibly lose patent rights. Please confirm that the attached "Iviewit.com Patent Portfolio" table, which lists the patent applications filed for Iviewit.com by your firm, is accurate and complete.

I also request that you contact Ray Joao to confirm which applications were filed in what countries and whether or not Ray has any additional Iviewit correspondence or materials that were not transferred to Foley & Lardner.

Furthermore, the client requests that I obtain a written confirmation from both you and Ray that all files, materials, and correspondence have been transferred to Foley & Lardner.

Please confirm receipt of this facsimile and let me know that these matters will be handled promptly and appropriately.

Very truly yours,

Douglas A. Boehm

Re: Transfer of IP files for IVIEWIT.COM

Dear Mr. Meltzer:

As you are aware, Mr. Brian Utley, President of IVIEWIT.COM, LLC, has requested in a previous letter that all Intellectual Property files for IVIEWIT.COM be transferred from Meltzer, Lippe to Foley & Lardner. Please have the files forwarded to me at the above address as soon as possible. Upon receipt of the IVIEWIT.COM files, Foley & Lardner will be responsible for taking action in these matters.

These Intellectual Property files include the eight provisional patent application matters listed on the attached sheet, as well as any other Intellectual Property matters that may be missing from this list. Furthermore, I would sincerely appreciate it if you could include copies on disk of the electronic word processing files for these matters, so the eight patent applications won't have to be retyped. Any electronic word processor format will suffice.

Of course, if any questions or problems arise, please do not hesitate to contact me. I thank you in advance for your cooperation.

Very truly yours,

Douglas A. Boehm

Subject: lviewit.com Files

Dawn --

As I mentioned on the telephone this afternoon, I received your Federal Express package this morning containing the Meltzer, Lippe files for lviewit.com. The package contained 7 folders corresponding to your docket numbers 5865-1,3,4,4.1,5,6, and 7. However, the file folder for your docket no. 5865-8 is missing. Furthermore, not all of the paperwork for the PCT application (your docket no. 5865-10) was included in the first file 5865-1 (which is the PCT's parent case). Is there a 5865-10 file also?

During our phone conversation, you agreed to review your docket and files for 5865-8, 5865-10, and any other 5865 matters for lviewit.com tomorrow, and forward these files to me right away.

Thanks for your assistance.

--Doug

Ray Joao

Ray, there are major missing items in docket's 1+6:

1. Claims do not reference stitching
2. Process is amended as shown on the diagram
3. The relationship between the enhanced digital image and the zoom and pan function together with controls is not clear
4. The description and claims stop at the production and loading of the image.

5. Object model Brian

Never saw this till all these books

Re: PCT Patent Application for System and Method for Providing an Enhanced Digital Image File
Inventor: Bernstein
Our Ref. No.: 57103/120

Brian:

During our brief telephone conversation today, you provided a few comments in response to my letter to you dated July 21, 2000. These comments were based on your review of the prior provisional applications, and are summarized below.

1. The step of "enlarging" is not essential for all embodiments of the invention.
2. The aspects of zooming and panning, and the function of the applet must be described in greater detail. ←
3. The disclosure relating to acquiring a photograph of a film video should be removed. However, the disclosure relating to processing one frame of a video according to the process steps of the invention should be retained.
4. In the provisional patent application having our reference number 57103/108, the flowchart in FIG. 2A does not match the corresponding description in the specification. Correction is needed.

5. Again, in the application for 57103/108, the claims in their current form may not be of the proper scope and should be revised.
6. You commented that the prior-filed PCT applications relating to enhanced video files did not specifically mention potential applications in radiographic images, X-rays, MRIs, etc. Regardless of whether these specific applications are supported, additional subject matter cannot be introduced to the prior-filed PCT applications unless additional patent applications are filed. Please advise if you would like us to file patent applications directed to these specific applications. *IMAGE / and a video but we will process*

We discussed the possibility that the provisional applications currently on file may not provide sufficient disclosure to support all of the claims we may eventually want to file in the PCT patent application we are currently preparing, and, therefore, the sale of images using this process in September, 1999 may bar patentability in some foreign countries. You instructed us to proceed with the PCT filing to preserve whichever foreign filing rights are available. ←

Accordingly, comments 1-5 will be incorporated in the above-referenced PCT patent application. If you have any further questions or comments, please do not hesitate to contact me.

Steve Becker

CORRECTED VERSION - CORRECTED ON 5/14/2003
Transcription of Telephone Conference
Conducted July 31, 2000

Participants:

Simon Bernstein, Eliot Bernstein, Maurice Buchsbaum,
Brian Utley, Doug Boehm, Chris Wheeler

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified. Note also that this recording has numerous instances of participants speaking at once or carrying on simultaneous side conversations that make it difficult to follow and transcribe the entire line of discussion.

Utley: <begins midstream>...status of the original digital image filings, and basically the fact that the original filings do not cover the full subject matter of the imaging technology; and to wit, one of the omissions, in particular in reading the claims section of the provisional and the formal filing, relates to the zooming and panning capability that is inherent in the technology. This has become a topic due to the fact that we are currently in the second phase of filing imaging patent protection which is driven by the provisionals that were filed later last year, between August and December of last year. So the concern that were expressed by Eliot in reviewing this is that this omission of the zooming and panning capability was attributable to a failure, for whatever reason, on the part of Ray Joao, the patent attorney of record, in constructing and putting together the provisional and formal filing<tape cuts out here> did I say it is that right Eliot

E Bernstein I believe so

Utley Is that your understanding

E Bernstein Correct

Utley The purpose of this meeting is to review the facts and I think there are two particular points that are ...that are important to moving ahead. The first is: "Given that the filings are what they are, and given what we know about the filing which is scheduled to take place this week on Wednesday, what means do we have to correct the situation; and given whatever corrections we find, what then is the impact or exposure to iviewit based upon what actions we can take. Then, lastly, what, if any, recourse might iviewit have vi sa vi the omissions in the original filings Are there any other issues, Doug?

Bernstein: Yeah, just correcting back to Ray Joao's work of the formal filing that he filed. Do we have a copy of that?

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PLAYING
A DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,297, filed June 3, 1999, U.S. Provisional Application No. 60/155,404, filed September 22, 1999, U.S. Provisional Application No. 60/169,559, filed December 8, 1999 and PCT International Application No. _____, filed June 2, 2000.

FIELD OF THE INVENTION

The present invention relates generally to video imaging. More specifically, the present invention relates to a system and method for providing high quality digital video files for streaming across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file first. A video player decompresses and plays the data as it is transferred to a user computer over the World-Wide Web. Streaming video avoids the delay entailed in downloading an entire file and then playing it with a plug-in application. Streaming video requires a communications connection (e.g., a network, Internet, etc.) and a computer powerful enough to execute the decompression algorithm in real time.

UTILITY PATENT APPLICATION
TRANSMITTAL

Assistant Commissioner for Patents
Box PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(b) is the nonprovisional utility patent application of:

Eliot I. Bernstein
Zakirul A. Shirajee

eliot Note
Jude Rosario is missing

Enclosed are:

- [X] Specification, Claim(s), and Abstract (29 pages).
- [X] Informal drawings (3 sheets, Figures 1-3).
- [X] Unexecuted Declaration and Power of Attorney (4 pages).
- [] Assignment of the invention to lviewit.com, Inc..
- [] Assignment Recordation Cover Sheet.
- [] Check in the amount of \$40.00 for Assignment recordation.
- [] Small Entity statement.
- [] Information Disclosure Statement.
- [] Form PTO-1449 with copies of ___ listed reference(s).

The filing fee is calculated below:

	Claims as Filed	Included in Basic Fee	Extra Claims	Rate	Fee Totals
Basic Fee				\$690.00	\$690.00
Total Claims:	26	- 20	= 6	x \$18.00	= \$108.00
Independents:	3	- 3	= 0	x \$78.00	= \$0.00
If any Multiple Dependent Claim(s) present:				+ \$260.00	= \$0.00
				SUBTOTAL:	= \$798.00
[]	Small Entity Fees Apply (subtract 1/2 of above):				= \$0.00
	TOTAL FILING FEE:				= \$798.00

- [] A check in the amount of \$798.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

Date 6/5/00

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System And Method For Playing A Digital Video File

(Attorney Docket No. 57103/115)

the specification of which (check one)

X is attached hereto.

___ was filed on _____ as United States Application Number or PCT International Application Number _____ and was amended on _____ (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code §119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or §365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date

I HEREBY CLAIM the benefit under Title 35, United States Code, §120 of any United States application(s), or § 365(c) of any PCT international application designating the United States of America, listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT International application in the manner provided by the first paragraph of Title 35, United States Code, § 112, I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date of the prior application and the national or PCT international filing date of this application.

U.S. Parent Application Number	PCT Parent Application Number	Parent Filing Date	Parent Patent Number

I HEREBY APPOINT the following registered attorneys and agents of the law firm of FOLEY & LARDNER to have full power to prosecute this application and any continuations, divisions, reissues, and reexaminations thereof, to receive the patent, and to transact all business in the United States Patent and Trademark Office connected therewith:

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PLAYING
A DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,297, filed June 3, 1999, U.S. Provisional Application No. 60/155,404, filed September 22, 1999, U.S. Provisional Application No. 60/169,559, filed December 8, 1999 and PCT International Application No. _____, filed June 2, 2000.

FIELD OF THE INVENTION

The present invention relates generally to video imaging. More specifically, the present invention relates to a system and method for providing high quality digital video files for streaming across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file first. A video player decompresses and plays the data as it is transferred to a user computer over the World-Wide Web. Streaming video avoids the delay entailed in downloading an entire file and then playing it with a plug-in application. Streaming video requires a communications connection (e.g., a network, Internet, etc.) and a computer powerful enough to execute the decompression algorithm in real time.

Inventor(s): Bernstein et al.
Our Ref.: 57103/11

eliot
Note
This sent months after filing for review by inventors of first draft? Dicks VA Bar response said all inventors had time to review and sign.

Re: Patent Application for a Digital Video File

Dear Brian:

Enclosed please find the final draft of the above-referenced patent application which was filed with the U. S. Patent and Trademark Office on June 5, 2000 as Application No. 09/587,026. I have also enclosed various formal papers which require the inventors' signatures.

Please have the inventors thoroughly read the patent application, including the specification, claims, and drawings, to ensure that it provides an accurate and complete description of the invention. The written description should be sufficiently complete to enable someone of ordinary skill in the art to make and use the invention. The application must describe the "best mode" contemplated by the inventors for carrying out the invention, i.e., in order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret. If, after review of the application, the inventors find that anything in the application is incomplete, inaccurate, untrue, or possibly misleading, please contact me immediately so we can discuss the matter. If any typographical, grammatical, or other minor formal errors are found, please have them noted in a separate memo to me such that I can correct them by amendment at a later date.

If everything appears to be in order, please have the inventors read, sign, and date the Declaration and Power of Attorney form at the colored tags. By executing this document, they will be verifying the originality of their invention and acknowledging their duty to disclose to the U.S. Patent and Trademark Office any information of which they are

ESTABLISHED 1842

A MEMBER OF GLOBALLEX WITH MEMBER OFFICES IN BERLIN, BRUSSELS, DRESDEN, FRANKFURT, LONDON, SINGAPORE, STOCKHOLM AND STUTTGART

Mr. Brian G. Utley
July 27, 2000
Page 2

aware that could be material to the examination of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Note that the Declaration is signed under penalty of perjury, so careful consideration should be paid to its contents before signing.

Each inventor should also read, sign, and date the enclosed Assignment and Agreement, which must be executed in the presence of a Notary Public. By executing the Assignment, they will be acknowledging their obligation to Iviewit Holdings, Inc. by assigning all their rights in the invention to the company.

After the inventors execute the formal papers, please return the fully executed documents to me as soon as possible. You may keep the copy of the patent application for your records.

Now that the patent application is on file, any device covered by the claims of the application may be marked "Patent Applied For" or "Patent Pending" or an abbreviation thereof. This "Patent Pending" marking is not mandatory, as it only serves as a cautionary warning to would-be competitors that the device may be subject to patent protection in the future. However, this marking should be continued only as long as the application is still pending in the United States Patent and Trademark Office. If the application issues as a patent, the appropriate patent number should replace this marking. If the application should become abandoned and this is the only application pertinent to the device, then the marking should be eliminated entirely.

If you have any questions regarding any of the above, please do not hesitate to contact me.

eliot Note
No copies to anyone at Company or inventors

Very truly yours,

Douglas A. Boehm

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 690 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- Total additional claim fee(s) for this application is \$108.
 - \$108 for 6 total claims over 20.
- The oath or declaration is unsigned.
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 928.

A copy of this notice MUST be returned with the reply.

TRANSMITTAL OF MISSING PARTS OF PATENT APPLICATION

Commissioner for Patents
Washington, D.C. 20231

Attn: BOX MISSING PARTS

eliot Note
These are signed on July 31 and sent on 10/3/00??

Sir:

In response to the Notice to File Missing Parts of Application mailed on August 4, 2000, in the above-identified application, transmitted herewith are the missing parts needed to complete the filing of the subject patent application.

- [X] Declaration and Power of Attorney (4 pages) enclosed
- [X] Copy of Notice to File Missing Parts (Part 2 of Form PTO-1533)
- [X] Applicant is entitled to Small Entity status
- [X] Check in the amount of \$474.00 in payment of \$355.00 Basic filing fee, \$54.00 additional total claims fee, \$65.00 late filing fee (37 C.F.R. § 1.16(e)) enclosed
- [] Please charge Deposit Account No. 06-1447 in the amount of ___ in payment of surcharge fee (37 C.F.R. § 1.16(e))

The Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System And Method For Playing A Digital Video File

(Attorney Docket No. 57103/115)

the specification of which (check one)

 is attached hereto.

 x was filed on June 5, 2000 as United States Application Number 09/587,026.

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or § 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

**SYSTEM AND METHOD FOR PROVIDING AN
ENHANCED DIGITAL IMAGE FILE**

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is a continuation-in-part of U.S. Patent Application No. 09/522,721, filed March 10, 2000, which claims the benefit of priority from U.S. Provisional Application No. 60/125,824, filed March 24, 1999. The present application also
5 claims the benefit of priority from U.S. Provisional Application Nos. 60/146,726, filed August 2, 1999, 60/149,737, filed August 19, 1999, 60/155,404, filed September 22, 1999, and 60/169,559, filed December 8, 1999.

10 **FIELD OF THE INVENTION**

The present invention is directed to a system and a method for producing enhanced digital images and, in particular, to a system and a method for producing enhanced digital images having improved resolution for zooming and/or panning within a single file.

15 **BACKGROUND OF THE INVENTION**

In the field of digital imaging, the primary design challenge is that the viewer desires ideal image quality delivered to the viewer's display system. In a limited-bandwidth network, such as the Internet, it is important to transfer the image data in a
20 reasonable amount of time. However, ideal image quality requires an enormous amount of digital data. Today's networks are not capable of transferring an ideal digital image in a reasonable time.

It is known that one can view a digital image on a display screen and "zoom" (i.e., magnify a portion of an image and

FILING RECEIPT

OC000000005438064

Date Mailed: 09/29/2000

Receipt is acknowledged of this nonprovisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Foreign Applications

If Required, Foreign Filing License Granted 09/28/2000

Title

System and method for providing an enhanced digital image file

Preliminary Class

358

Data entry by : DUNCAN, KIMBERELY Team : OIPE Date: 09/29/2000

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PLEASE NOTE the following information about the Filing Receipt:

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

UTILITY PATENT APPLICATION
TRANSMITTAL

Assistant Commissioner for Patents
Box PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(b) is the nonprovisional utility patent application of:

Eliot I. Bernstein
Brian G. Utley

Enclosed are:

- Specification, Claim(s), and Abstract (30 pages).
- Informal drawings (7 sheets, Figures 1-7).
- Unexecuted Declaration and Power of Attorney (4 pages).
- Assignment of the invention to lviewit.com, Inc..
- Assignment Recordation Cover Sheet.
- Check in the amount of \$40.00 for Assignment recordation.
- Small Entity statement.
- Information Disclosure Statement.
- Form PTO-1449 with copies of ___ listed reference(s).

The filing fee is calculated below:

	Claims as Filed	Included in Basic Fee	Extra Claims	Rate	Fee Totals
Basic Fee				\$690.00	\$690.00
Total Claims:	31	- 20	= 11	x \$18.00	= \$198.00
Independents:	3	- 3	= 0	x \$78.00	= \$0.00
If any Multiple Dependent Claim(s) present:				+ \$0.00	= \$0.00
				SUBTOTAL:	= \$888.00
[]				Small Entity Fees Apply (subtract 1/2 of above):	= \$0.00
				TOTAL FILING FEE:	= \$888.00

- A check in the amount of \$888.00 to cover the filing fee is enclosed.
- The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

Date 8/2/00

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System and Method for Providing an Enhanced Digital Image File

(Attorney Docket No. 57103/121)

the specification of which (check one)

 X is attached hereto.

 was filed on as United States Application Number or PCT International Application Number and was amended on (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code §119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or §365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date
60/125,824	3/24/1999

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System and Method for Providing an Enhanced Digital Image File

(Attorney Docket No. 57103/121)

the specification of which (check one)

is attached hereto.

was filed on 8/2/2000 as United States Application Number or PCT International Application Number 09/630,939 and was amended on _____ (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or § 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PROVIDING AN
ENHANCED DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional
Application No. 60/137,297, filed June 3, 1999, U.S. Provisional
Application No. 60/155,404, filed September 22, 1999, U.S.
5 Provisional Application No. 60/169,559, filed December 8, 1999,
and PCT International Application No. _____, filed June 2,
2000.

FIELD OF THE INVENTION

The present invention relates generally to video
10 imaging. More specifically, the present invention relates to a system
and method for providing high quality digital video files for streaming
across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played
15 in real time as it is downloaded over the Internet, as opposed to
storing it in a local file first. A video player decompresses and plays
the data as it is transferred to a user computer over the World-Wide
Web. Streaming video avoids the delay entailed in downloading an
entire file and then playing it with a plug-in application. Streaming
20 video requires a communications connection (e.g., a network,
Internet, etc.) and a computer powerful enough to execute the
decompression algorithm in real time.

Sent two months after filing for inventor review, this contradicts statements to VA Bar that inventors had time to review and change applications.

Re: U.S. Patent Application
Title: System And Method For Providing An Enhanced Digital Video File
Inventor(s): Bernstein et al.
Our Ref.: 57103/116

Dear Brian:

Enclosed please find the final draft of the above-referenced patent application which was filed with the U. S. Patent and Trademark Office on June 5, 2000 as Application No. 09/587,734. I have also enclosed various formal papers which require the inventors' signatures.

Please have the inventors thoroughly read the patent application, including the specification, claims, and drawings, to ensure that it provides an accurate and complete description of the invention. The written description should be sufficiently complete to enable someone of ordinary skill in the art to make and use the invention. The application must describe the "best mode" contemplated by the inventors for carrying out the invention, i.e., in order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret. If, after review of the application, the inventors find that anything in the application is incomplete, inaccurate, untrue, or possibly misleading, please contact me immediately so we can discuss the matter. If any typographical, grammatical, or other minor formal errors are found, please have them noted in a separate memo to me such that I can correct them by amendment at a later date.

If everything appears to be in order, please have the inventors read, sign, and date the Declaration and Power of Attorney form at the colored tags. By executing this document, they will be verifying the originality of their invention and acknowledging their

ESTABLISHED 1842

duty to disclose to the U.S. Patent and Trademark Office any information of which they are aware that could be material to the examination of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Note that the Declaration is signed under penalty of perjury, so careful consideration should be paid to its contents before signing.

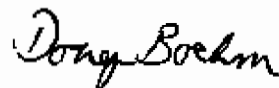

Each inventor should also read, sign, and date the enclosed Assignment and Agreement, which must be executed in the presence of a Notary Public. By executing the Assignment, they will be acknowledging their obligation to Ivivewit Holdings, Inc. by assigning all their rights in the invention to the company.

After the inventors execute the formal papers, please return the fully executed documents to me as soon as possible. You may keep the copy of the patent application for your records.

Now that the patent application is on file, any device covered by the claims of the application may be marked "Patent Applied For" or "Patent Pending" or an abbreviation thereof. This "Patent Pending" marking is not mandatory, as it only serves as a cautionary warning to would-be competitors that the device may be subject to patent protection in the future. However, this marking should be continued only as long as the application is still pending in the United States Patent and Trademark Office. If the application issues as a patent, the appropriate patent number should replace this marking. If the application should become abandoned and this is the only application pertinent to the device, then the marking should be eliminated entirely.

If you have any questions regarding any of the above, please do not hesitate to contact me.

Very truly yours,

Douglas A. Boehm

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

eliot Oval 3/20/2004 2:24:44 AM

1 year after filing and 5 months after supposedly signing an oath for Foley, the Oath is still missing???

An application number and filing date have been accorded to this application, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is unsigned.
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 130.

A copy of this notice MUST be returned with the reply.

Thank You

1 training that you've had or maybe you -- you did 113

2 indicate that you had any degree in mathematics.

3 Is that something that you have some experience

4 from from some other portion of your employment

5 or background?

6 A. I have training and experience in

7 mathematics.

8 Q. I'm sorry.

9 A. I say I have training and experience

10 in mathematics.

11 Q. How about in the scaling video

12 invention; is that part of what you've already

13 described?

14 A. That is readily derived from a

15 mathematical background.

16 Q. How about the remote control video

17 applications?

18 A. That's different.

19 Q. Okay. Now going back to --

20 A. What --

21 Q. -- the patent dealing specifically

22 with remote control applications.

23 A. What I did there was I established

24 the fact that the design point that Elicot had

25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Elliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

Re: PCT International Patent Application
 Title: System and Method for Video Playback Over a Network
 Inventor(s): Bernstein et al.
 Our Ref.: 57103/117

Dear Brian:

Enclosed please find the first draft of the above-referenced patent application (last page marked 001.793381.1), which has been prepared in accordance with the previously filed U.S. provisional patent applications (MLG Docket Nos. 5865-4 and 5865-4.1). As you know, a careful and critical review of this draft application by you and the inventors is imperative to ensure that the you are all satisfied with the content of the application and the proposed claim scope.

I note that Jeff Friedstein is named as a co-inventor on this application pursuant to Eliot Bernstein's instructions. Accordingly, Jeff must review a draft of the application before filing.

I also note that the deadline for filing this application in order to claim priority to all related provisional applications is Wednesday, June 7, 2000. Therefore, we must receive your comments as soon as possible.

Please have the inventor(s) thoroughly read the application draft, including the specification, claims, and drawings, to ensure that it provides a complete and accurate description of the invention. The attached "Inventor Information Sheet" provides a brief explanation of the parts of a utility patent application, the duty of disclosure, and inventorship. I would also like you to personally read and comment on this draft.

Mr. Brian G. Utley
June 6, 2000
Page 2

This PCT application incorporates all of the subject matter of U.S. Provisional Patent Application No. 60/137,921, filed June 7, 1999 (MLG Docket No. 5865-4) and U.S. Provisional Patent Application No. 60/141,440, filed June 29, 1999 (MLG Docket No. 5865-4.1).

You and the inventors should feel free to supplement, correct, or modify any part of the application. In particular, please review the subject matter disclosed in the two above-referenced provisional patent applications. After your review, if you or the inventors feel that any subject matter from these three provisional patent applications should be reflected in the draft PCT application, but is not, please notify me immediately.

The drawings attached to the application are informal sketches that will suffice for purposes of filing. Formal drawings will be prepared at a later date, as they are required for publication of the PCT application.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

Please have the inventors mark the appropriate changes on this copy of the application, make a copy of the changes, and return the hand-corrected copy to me via facsimile. A revised application incorporating the changes will then be submitted to you for your approval. We will handle execution of the formal papers at a later date.

Pursuant to your instructions, to preserve foreign filing options, I plan to designate all of the countries for filing under the PCT (see attached list of PCT Contracting States). Note, however, that not all foreign countries are members of the PCT (e.g., Taiwan), so to maintain the benefit of priority to the U.S. applications, we would have to file foreign national applications immediately in those non-PCT countries. This would require up-front translation costs and sufficient time for our foreign associates to prepare and file the applications before June 7, 2000. It is my understanding that you DO NOT want us to file in any countries other than those that are members of the PCT. Please let me know IMMEDIATELY if this understanding is not correct.

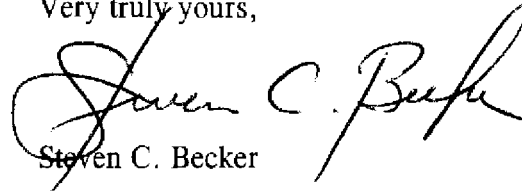

elliot 3/20/2004 5:37:06 PM
Line

The Company is not in possession of these records or hand corrected copies and Foley claims to have retained no records of the files in the VA Bar Response.

Mr. Brian G. Utley
June 6, 2000
Page 3

If you or the inventors have any questions, please do not hesitate to contact me.
I look forward to receiving at least your preliminary comments on the application by
tomorrow.

Very truly yours,

Steven C. Becker

No carbon copies to anyone.	

Strange that Foley starts suddenly putting all these disclaimers regarding inventors.

PC 11 Application Form Application 1/2/04

Screen and Method for Video Playback Over a Network

Inventor(s): Bernstein, et al.

INVENTOR INFORMATION SHEET

Sections of a Utility Patent Application

- Background of the Invention

The Background of the Invention describes the technology that existed before your invention, i.e., the “prior art”. This section typically discusses how the need for your invention arose, describes how others attempted to satisfy that need prior to the time of your invention, and points out the deficiencies of the prior art in meeting that need. If you aware of any other prior art that should be mentioned in this background section, please supplement this section and forward any literature that you might have to me.

- Summary of the Invention

The Summary of the Invention section is merely a brief paraphrasing of the basic claims, along with a statement of the objectives and advantages of the present invention.

- Brief Description of the Drawings

The Brief Description of the Drawings is merely a listing of the figures, and should be self-explanatory.

- Detailed Description of the Preferred Embodiments

The Detailed Description of the Preferred Embodiments section should provide a full, clear, and concise description of your invention so that any person skilled in the art could make or use the invention. Furthermore, the application must describe the “best mode” contemplated by the inventor(s) for carrying out the invention. In order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret.

- Claims

The claims are the most important part of the patent application. They precisely define the invention and determine the scope of legal protection granted by the patent. The claims must particularly point out and distinctly claim the invention. The claimed subject matter must be distinguishable over that which the prior art suggests to those skilled in this field. Accordingly, the claims should be scrutinized with a view toward protecting your precise

invention and those concepts which could be considered an outgrowth of it, yet not encompassing knowledge from the prior art or obvious extensions thereof. In other words, the scope of the claims must be broad enough to provide that patent protection to which you are entitled, yet narrow enough to be distinguishable over the prior art. The terminology of the claims must be adequately supported by the description contained in the specification. Please keep in mind that all dependent claims, which are identifiable by the phrase "according to claim x" or "of claim x", are interpreted as containing all of the limitations of the other claims which are referred to by that dependent claim. Thus, the independent claims are the broadest statement of your invention, and the dependent claims provide additional limitations to narrow the scope of your invention. Although the inventive concepts of each set of independent claims are interrelated, please keep in mind that they must be critically distinguished from each other. Each set of claims must stand on its own merit.

- **Abstract of the Disclosure**

The Abstract of the Disclosure section is a very brief description of what the application generally discloses.

- **Drawings**

The Drawings section should be self-explanatory.

Duty of Disclosure

All individuals associated with the filing or prosecution of a patent application are under a duty of candor and good faith to the U.S. Patent and Trademark Office. This duty specifically includes a duty to disclose any information known to be material to the patentability of any claim of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Pursuant to this duty of disclosure, we will file an Information Disclosure Statement with the U.S. application listing the patent documents found in any prior art searches, as well as any technical articles mentioned in the disclosure materials. Accordingly, if any additional information relevant to your invention should come to your attention at any time before issuance of the patent, please immediately let us know so we can either include it in the Information Disclosure Statement or submit a Supplemental Information Disclosure Statement.

Inventorship

The proper inventors would be those people who contributed to the subject matter of the invention as defined in the claims of the application. There may be joint

inventors even though they did not physically work together or at the same time, did not make the same type or amount of contribution, or did not make a contribution to the subject matter of every claim in the patent. It is our understanding that the above-identified persons are to be named as co-inventors of this application. If this is not accurate, please call us to discuss the conception and development of each of the different embodiments of the invention, so that we will be able to confirm your determination of proper inventorship before filing the application.

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR VIDEO PLAYBACK OVER A NETWORK

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,921, filed June 7, 1999, and U.S. Provisional Application No. 60/141,440, filed June 29, 1999.

5 FIELD OF THE INVENTION

The present invention relates generally to a system and method for playing a video program over a network. The present invention also relates to a system and method for controlling a video device over a network.

10 BACKGROUND OF THE INVENTION

The widespread and ever-growing use of communication networks, such as the Internet and other computer-to-computer communication networks, for the dissemination of information, has fueled the need to provide for the transmission of
15 video data over these networks. Currently, the transmission of video data over networks has been less than optimal, given current bandwidth and technology constraints. These constraints have impeded the ability to offer enhanced resolution and/or full motion video data over these networks.

20 The Internet marketplace is demanding enhanced resolution and high definition streaming video and precise representations of video images, objects, and events. Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file

Re: PCT International Patent Application
Title: System and Method for Video Playback Over a Network
Inventor(s): Bernstein et al.
Our Ref.: 57103/117

Dear Brian:

Enclosed please find a first draft of the claims of the above-referenced patent application, which have been prepared in accordance with oral disclosure provided to us by Eliot Bernstein yesterday and further in accordance with two former provisional applications (i.e., old docket numbers 5865-4 and 5865-4.1). As you know, a careful and critical review of these claims by you and the inventors is imperative to ensure that the you are all satisfied with the proposed claim scope.

Eliot has informed us that Jeff Friedstein is to be named as a co-inventor of this invention. Accordingly, please provide a copy of these claims and these instructions to Jeff at your earliest opportunity.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

If you need any assistance in reviewing the claims, please feel free to contact me.

Missing cover page with inventors listed on it

WHAT IS CLAIMED IS:

- 1 1. A system for video playback over a network,
2 comprising:
3 a video playback device configured to transmit a video
4 signal from a non-volatile storage medium; and
5 a computer coupled to the video playback device
6 configured to receive the video signal and to transmit the video
7 signal over a network.
- 1 2. The system of claim 1, further comprising a capture
2 device coupled between the video playback device and the
3 computer, the capture device configured to receive the video signal
4 and to generate a digital video signal based on the video signal.
- 1 3. The system of claim 2, wherein the computer utilizes
2 video conferencing software to receive the digital video signal, to
3 perform at least one processing step thereon, and to provide the
4 digital video signal over the network.
- 1 4. The system of claim 3, wherein the processing step
2 includes configuring the digital video signal for full screen display on
3 a user computer.
- 1 5. The system of claim 4, wherein the capture device is
2 configured to capture the video signal at a full screen size.
- 1 6. The system of claim 1, wherein the network includes
2 the Internet.

This PCT application incorporates all of the subject matter of U.S. Provisional Patent Application No. 60/137,921, filed June 7, 1999 (MLG Docket No. 5865-4) and U.S. Provisional Patent Application No. 60/141,440, filed June 29, 1999 (MLG Docket No. 5865-4.1).

You and the inventors should feel free to supplement, correct, or modify any part of the application. In particular, please review the subject matter disclosed in the two above-referenced provisional patent applications. After your review, if you or the inventors feel that any subject matter from these three provisional patent applications should be reflected in the draft PCT application, but is not, please notify me immediately.

The drawings attached to the application are informal sketches that will suffice for purposes of filing. Formal drawings will be prepared at a later date, as they are required for publication of the PCT application.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

Please have the inventors mark the appropriate changes on this copy of the application, make a copy of the changes, and return the hand-corrected copy to me via facsimile. A revised application incorporating the changes will then be submitted to you for your approval. We will handle execution of the formal papers at a later date.

Pursuant to your instructions, to preserve foreign filing options, I plan to designate all of the countries for filing under the PCT (see attached list of PCT Contracting States). Note, however, that not all foreign countries are members of the PCT (e.g., Taiwan), so to maintain the benefit of priority to the U.S. applications, we would have to file foreign national applications immediately in those non-PCT countries. This would require up-front translation costs and sufficient time for our foreign associates to prepare and file the applications before June 7, 2000. It is my understanding that you DO NOT want us to file in any countries other than those that are members of the PCT. Please let me know IMMEDIATELY if this understanding is not correct.

FOLEY & LARDNER

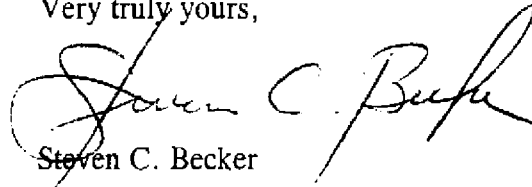

Mr. Brian G. Utley

June 6, 2000

Page 3

If you or the inventors have any questions, please do not hesitate to contact me. I look forward to receiving at least your preliminary comments on the application by tomorrow.

Very truly yours,

A handwritten signature in black ink, appearing to read "Steven C. Becker". The signature is written in a cursive style with a large, looping initial "S".

PCT International Patent Application entitled
System and Method for Video Playback Over a Network
Inventor(s): Bernstein, et al.

INVENTOR INFORMATION SHEET

Sections of a Utility Patent Application

- **Background of the Invention**

The Background of the Invention describes the technology that existed before your invention, i.e., the "prior art". This section typically discusses how the need for your invention arose, describes how others attempted to satisfy that need prior to the time of your invention, and points out the deficiencies of the prior art in meeting that need. If you are aware of any other prior art that should be mentioned in this background section, please supplement this section and forward any literature that you might have to me.

- **Summary of the Invention**

The Summary of the Invention section is merely a brief paraphrasing of the basic claims, along with a statement of the objectives and advantages of the present invention.

- **Brief Description of the Drawings**

The Brief Description of the Drawings is merely a listing of the figures, and should be self-explanatory.

- **Detailed Description of the Preferred Embodiments**

The Detailed Description of the Preferred Embodiments section should provide a full, clear, and concise description of your invention so that any person skilled in the art could make or use the invention. Furthermore, the application must describe the "best mode" contemplated by the inventor(s) for carrying out the invention. In order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret.

- **Claims**

The claims are the most important part of the patent application. They precisely define the invention and determine the scope of legal protection granted by the patent. The claims must particularly point out and distinctly claim the invention. The claimed subject matter must be distinguishable over that which the prior art suggests to those skilled in this field. Accordingly, the claims should be scrutinized with a view toward protecting your precise

invention and those concepts which could be considered an outgrowth of it, yet not encompassing knowledge from the prior art or obvious extensions thereof. In other words, the scope of the claims must be broad enough to provide that patent protection to which you are entitled, yet narrow enough to be distinguishable over the prior art. The terminology of the claims must be adequately supported by the description contained in the specification. Please keep in mind that all dependent claims, which are identifiable by the phrase "according to claim x" or "of claim x", are interpreted as containing all of the limitations of the other claims which are referred to by that dependent claim. Thus, the independent claims are the broadest statement of your invention, and the dependent claims provide additional limitations to narrow the scope of your invention. Although the inventive concepts of each set of independent claims are interrelated, please keep in mind that they must be critically distinguished from each other. Each set of claims must stand on its own merit.

- Abstract of the Disclosure

The Abstract of the Disclosure section is a very brief description of what the application generally discloses.

- Drawings

The Drawings section should be self-explanatory.

Duty of Disclosure

All individuals associated with the filing or prosecution of a patent application are under a duty of candor and good faith to the U.S. Patent and Trademark Office. This duty specifically includes a duty to disclose any information known to be material to the patentability of any claim of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Pursuant to this duty of disclosure, we will file an Information Disclosure Statement with the U.S. application listing the patent documents found in any prior art searches, as well as any technical articles mentioned in the disclosure materials. Accordingly, if any additional information relevant to your invention should come to your attention at any time before issuance of the patent, please immediately let us know so we can either include it in the Information Disclosure Statement or submit a Supplemental Information Disclosure Statement.

Inventorship

The proper inventors would be those people who contributed to the subject matter of the invention as defined in the claims of the application. There may be joint

inventors even though they did not physically work together or at the same time, did not make the same type or amount of contribution, or did not make a contribution to the subject matter of every claim in the patent. It is our understanding that the above-identified persons are to be named as co-inventors of this application. If this is not accurate, please call us to discuss the conception and development of each of the different embodiments of the invention, so that we will be able to confirm your determination of proper inventorship before filing the application.

Note	
The first page now states 118 and the rest is 117.	

SYSTEM AND METHOD FOR VIDEO PLAYBACK OVER A NETWORK

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,921, filed June 7, 1999, and U.S. Provisional Application No. 60/141,440, filed June 29, 1999.

5 FIELD OF THE INVENTION

The present invention relates generally to a system and method for playing a video program over a network. The present invention also relates to a system and method for controlling a video device over a network.

10 BACKGROUND OF THE INVENTION

The widespread and ever-growing use of communication networks, such as the Internet and other computer-to-computer communication networks, for the dissemination of information, has fueled the need to provide for the transmission of video data over these networks. Currently, the transmission of video data over networks has been less than optimal, given current bandwidth and technology constraints. These constraints have impeded the ability to offer enhanced resolution and/or full motion video data over these networks.

20 The Internet marketplace is demanding enhanced resolution and high definition streaming video and precise representations of video images, objects, and events. Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file

Re: PCT International Patent Application
Title: System and Method for Video Playback Over a Network
Inventor(s): Bernstein et al.
Our Ref.: 57103/117

Dear Brian:

Enclosed please find the first draft of the above-referenced patent application (last page marked 001.793381.1), which has been prepared in accordance with the previously filed U.S. provisional patent applications (MLG Docket Nos. 5865-4 and 5865-4.1). As you know, a careful and critical review of this draft application by you and the inventors is imperative to ensure that the you are all satisfied with the content of the application and the proposed claim scope.

I note that Jeff Friedstein is named as a co-inventor on this application pursuant to Eliot Bernstein's instructions. Accordingly, Jeff must review a draft of the application before filing.

I also note that the deadline for filing this application in order to claim priority to all related provisional applications is Wednesday, June 7, 2000. Therefore, we must receive your comments as soon as possible.

Please have the inventor(s) thoroughly read the application draft, including the specification, claims, and drawings, to ensure that it provides a complete and accurate description of the invention. The attached "Inventor Information Sheet" provides a brief explanation of the parts of a utility patent application, the duty of disclosure, and inventorship. I would also like you to personally read and comment on this draft.

INVENTOR INFORMATION SHEET

Sections of a Utility Patent Application

- Background of the Invention

The Background of the Invention describes the technology that existed before your invention, i.e., the "prior art". This section typically discusses how the need for your invention arose, describes how others attempted to satisfy that need prior to the time of your invention, and points out the deficiencies of the prior art in meeting that need. If you are aware of any other prior art that should be mentioned in this background section, please supplement this section and forward any literature that you might have to me.

- Summary of the Invention

The Summary of the Invention section is merely a brief paragraph listing of the basic claims, along with a statement of the objectives and advantages of the present invention.

- Brief Description of the Drawings

The Brief Description of the Drawings is merely a listing of the figures, and should be self-explanatory.

- Detailed Description of the Preferred Embodiments

The Detailed Description of the Preferred Embodiments section should provide a full, clear, and concise description of your invention so that any person skilled in the art could make or use the invention. Furthermore, the application must describe the "best mode" contemplated by the inventor(s) for carrying out the invention. In order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret.

- Claims

The claims are the most important part of the patent application. They precisely define the invention and determine the scope of legal protection granted by the patent. The claims must particularly point out and distinctly claim the invention. The claimed subject matter must be distinguishable over that which the prior art suggests to those skilled in this field. Accordingly, the claims should be scrutinized with a view toward protecting your precise

invention and those concepts which could be considered an outgrowth of it, yet not encompassing knowledge from the prior art or obvious extensions thereof. In other words, the scope of the claims must be broad enough to provide that patent protection to which you are entitled, yet narrow enough to be distinguishable over the prior art. The terminology of the claims must be adequately supported by the description contained in the specification. Please keep in mind that all dependent claims, which are identifiable by the phrase "according to claim x" or "of claim x", are interpreted as containing all of the limitations of the other claims which are referred to by that dependent claim. Thus, the independent claims are the broadest statement of your invention, and the dependent claims provide additional limitations to narrow the scope of your invention. Although the inventive concepts of each set of independent claims are interrelated, please keep in mind that they must be critically distinguished from each other. Each set of claims must stand on its own merit.

- Abstract of the Disclosure

The Abstract of the Disclosure section is a very brief description of what the application generally discloses.

- Drawings

The Drawings section should be self-explanatory.

Duty of Disclosure

All individuals associated with the filing or prosecution of a patent application are under a duty of candor and good faith to the U.S. Patent and Trademark Office. This duty specifically includes a duty to disclose any information known to be material to the patentability of any claim of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Pursuant to this duty of disclosure, we will file an Information Disclosure Statement with the U.S. application listing the patent documents found in any prior art searches, as well as any technical articles mentioned in the disclosure materials. Accordingly, if any additional information relevant to your invention should come to your attention at any time before issuance of the patent, please immediately let us know so we can either include it in the Information Disclosure Statement or submit a Supplemental Information Disclosure Statement.

Inventorship

The proper inventors would be those people who contributed to the subject matter of the invention as defined in the claims of the application. There may be joint

inventors even though they did not physically work together or at the same time, did not make the same type or amount of contribution, or did not make a contribution to the subject matter of every claim in the patent. SCREENING DISCLOSURE INFORMATION: In order to assist in screening the accompanying international application for purposes of determining whether a license for foreign transmittal should and could be granted and for other purposes, the following information is supplied. (Note: check as many boxes as apply):

- A. The invention disclosed was not made in the United States.
- B. There is no prior U.S. application relating to this invention.
- C. The following prior U.S. application(s) contain subject matter which is related to the invention disclosed in the attached international application. (NOTE: priority to these applications may or may not be claimed on form PCT/RO/101 (Request) and this listing does not constitute a claim for priority)

Application no.	60/137,921	application no.	60/141,440
Application no.		application no.	

- D. The present international application is identical to contains less subject matter than that found in the prior U.S. application(s) identified in paragraph C above.
- E. The present international application contains additional subject matter not found in the prior U.S. application(s) identified in paragraph C above. The additional subject matter is found throughout the application and DOES NOT ALTER MIGHT BE CONSIDERED TO ALTER the general nature of the invention in a manner which would require the U.S. application to have been made available for inspection by the appropriate defense agencies under 35 U.S.C. 181 and 37 CFR 5.1. See 37 CFR 5.15.

III. Comments on the Amendments to the Abstract by the ISA/US under Rule 38. The following document(s) is(are) enclosed:

- A. A Response to the Invitation to Correct Defects in the International Application
- B. A Power of Attorney (General or Regular)
- C. Replacement pages:

Title: System and Method for Video Playback Over a Network
Applicant: Iviewit Holdings, Inc.
Our Ref.: 57103/118

Dear Brian:

Enclosed for your records is a copy of the Response to the Invitation to Correct Defects in the International Application, which was filed with the United States Patent and Trademark Office on August 18, 2000, in connection with the above-identified application.

We will keep you informed of all future developments as they occur. Please feel free to contact me with any questions or comments regarding this matter.

Very truly yours,

Douglas A. Boehm

SCREENING DISCLOSURE INFORMATION: In order to assist in screening the accompanying international application for purposes of determining whether a license for foreign transmittal should and could be granted and for other purposes, the following information is supplied. (Note: check as many boxes as apply):

- A. The invention disclosed was not made in the United States.
- B. There is no prior U.S. application relating to this invention.
- C. The following prior U.S. application(s) contain subject matter which is related to the invention disclosed in the attached international application. (NOTE: priority to these applications may or may not be claimed on form PCT/RO/101 (Request) and this listing does not constitute a claim for priority)

Application no.		application no.	
Application no.		application no.	

- D. The present international application is identical to contains less subject matter than that found in the prior U.S. application(s) identified in paragraph C above.
- E. The present international application contains additional subject matter not found in the prior U.S. application(s) identified in paragraph C above. The additional subject matter is found throughout the application and DOES NOT ALTER MIGHT BE CONSIDERED TO ALTER the general nature of the invention in a manner which would require the U.S. application to have been made available for inspection by the appropriate defense agencies under 35 U.S.C. 181 and 37 CFR 5.1. See 37 CFR 5.15.

III. Response to an Invitation from the RO/US. The following document(s) is(are) enclosed:

- A. A Response to the Invitation to Correct Defects in the International Application
- B. Four Powers of Attorney (General)
- C. Replacement pages:

pages		of the request (PCT/RO/101)	pages	1-2	of the figures
pages		of the description	pages		of the
pages		of the claims			abstract

- D. Submission of Priority Documents
- E. Fees as specified on attached Fee Calculation sheet form PCT/RO/101 annex

- IV. A Request for Rectification under PCT Rule 91 A Petition A Sequence Listing Diskette
- V. Other (please identify): Postcard

	Contents
Yellow!	The power of attorney or a copy of the general power of attorney will need to be furnished unless all applicants sign the request form.

Before submitting the International Application, please carefully verify that:

- the information contained on printed Request form is correct;
- Box IX of the Request form has been signed;
- all elements of the international application as indicated in Box VIII of the Request form have been attached; and,
- the diskette containing the PCT-EASY zip file of the International Application has been enclosed and has been clearly labeled "PCT-EASY", with the applicant's or agent's file reference, and the first applicant's name.

ATTENTION

DO NOT modify any indications on the Request form printout. The attached PCT-EASY application has been locked. If an error or an omission is discovered at this time, you must copy the submitted application as a template and make the change or correction in a new application (using the submitted application as a template). You may create such a template by copying the submitted application from the "Stored Forms" folder to the "New PCT Forms" folder. Open the new (.OWO) file created in the "New PCT Forms" folder, correct the errors and proceed with the submission process again.

Re: International Application No. PCT/US00/15602
Corresponding to U.S. Application Nos. 60/137,921 & 60/141,440
Title: System and Method for Video Playback Over a Network
Our Ref.: 57103/118

Dear Brian:

We are pleased to confirm that the above-identified application was filed with the U.S. Receiving Office on June 7, 2000, and accorded Application Number PCT/US00/15602. In accordance with your instructions, all PCT member countries were designated, and the European Patent Office was appointed as the International Searching Authority for this matter. Enclosed for your records is a copy of the application as filed, and related notifications from the United States Receiving Office.

Please note that the deadline for entering the national phase of this application is February 7, 2001. National phase may be deferred for another ten months, until December 7, 2001, by filing a Chapter II Demand for International Preliminary Examination. This Demand must be filed by January 7, 2001. For any country in which we do not meet the national phase deadline or, alternatively, the International Preliminary Examination deadline, the PCT application will be considered withdrawn.

Re: U.S. Patent filing corresponding to
PCT International Patent Application No. PCT/US00/15602
Title: System and Method for Video Playback Over a Network
Inventor(s): Bernstein et al.
Filed: June 7, 2000
Our Ref.: 57103/118

Dear Brian:

The above-referenced PCT patent application relates to video playback over a network (e.g., the Internet). As indicated, the PCT application was filed on June 7, 2000.

As you may know, a U.S. patent application may be filed at any time during the pendency of the corresponding PCT patent application in order to claim priority to the PCT patent application. However, pursuant to instructions from Eliot Bernstein on June 7, 2000, the corresponding U.S. patent application (i.e., our docket number 57103/117) has not yet been filed. ←

One advantage of waiting to file the U.S. patent application until the corresponding PCT patent application process is complete is that the cost of the U.S. application can be delayed until after a search report is received from the PCT search authority. The search report can provide an indication of the patentability of the invention, and a decision can then be made whether or not to continue with the U.S. application. One disadvantage is that it will take longer to bring the U.S. application to issuance if it is not filed until later.

Gentlemen:

The Agent appointed to act on behalf of the above-captioned international application has changed as follows:

Thomas M. Coester
BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN
12400 Wilshire Boulevard, 7th Floor
Los Angeles, California 90025

Attached are four General Power of Attorney forms in order for you to proceed with this request. Please note that also included is the Executive Employment Agreement authorizing Eliot I. Bernstein to sign documents on behalf of Brian G. Utley (see page 7, 8[e] Attorney-in-Fact). Furthermore, the addresses of the applicants and/or inventors, IVIEWIT HOLDINGS, INC., Eliot I. Bernstein, Jeffrey J. Friedstein and Brian G. Utley, have also changed.

Kindly acknowledge receipt of this fax.

Very truly yours,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN

Eric S. Hyman

EXECUTIVE EMPLOYMENT AGREEMENT

EXECUTIVE EMPLOYMENT AGREEMENT ("Agreement") made as of the 3rd day of August, 1999, by and between iviewit.com LLC, a Delaware limited liability company with an address at 2255 Glades Road, Suite 337 West, Boca Raton, Florida 33431 (the "Company"), and BRIAN G. UTLEY with an address at 1930 Southwest 8th Street, Boca Raton, Florida 33486 (the "Executive").

WHEREAS, the Company desires to employ Executive and to ensure the continued availability to the Company of the Executive's services, and the Executive is willing to accept such employment and render such services, all upon and subject to the terms and conditions contained in this Agreement;

NOW, THEREFORE, the Company and the Executive hereby agree as follows with respect to the Executive's employment with the Company:

1. **Employment.** The Company shall employ the Executive and the Executive shall be employed with the Company, on the terms and conditions hereinafter set forth, for a period commencing as of the date hereof (the "Effective Date") and ending three (3) years after the date hereof, unless sooner terminated pursuant to the provisions of this Agreement. Such period of employment shall be automatically extended for successive one-year terms of employment, unless either the Company or the Executive notifies the other in writing at least ninety (90) days prior to the end of the then current term that it or he does not intend to renew such employment, in which case such employment will expire at the end of the then current term. All references herein to the "Employment Period" shall refer to both the initial term and any such successive renewal terms. During his employment hereunder, the Executive shall be the President and Chief Operating Officer of each of the Company, uview.com, Inc., a Delaware corporation ("uview") and iviewit LLC, a Delaware limited liability company ("iviewit") (uview and iviewit are collectively referred to herein as the "Affiliates").

2. **Exclusive Efforts.** The Executive shall devote his full time, best efforts, skills and attention to the business and affairs of the Company and the Affiliates, shall serve the Company and the Affiliates faithfully and competently and shall at all times act in the Company's and the Affiliates' best interests. The services to be rendered by Executive during the Employment Period shall be the normal duties of a person employed as a President and Chief Operating Officer by a corporation in the Company's business, subject at all times to the direction and control of the Company's Board of Directors (the "Board").

3. **Compensation and Benefits.** The Company shall pay to the Executive, and the Executive agrees to accept, compensation as follows:

(a) Subject to the provisions of Section 3(b) below, the Company shall pay to the Executive, and the Executive agrees to accept, an initial base compensation of Fifty Thousand Dollars (\$50,000) per year (the "Initial Salary"). All compensation payable to Executive hereunder shall be payable in accordance with the normal payroll policies of the Company and shall be subject to all usual and customary payroll deductions, including all applicable withholding taxes.

(b) The Initial Salary shall be increased by: (i) Fifty Thousand Dollars (\$50,000) to One Hundred Thousand Dollars (\$100,000) per year on September 3, 1999 (the "Salary Increase Date"), (ii) an additional Fifty Thousand Dollars (\$50,000) to One Hundred Fifty Thousand Dollars (\$150,000) per year beginning six (6) months following the Salary Increase Date, and (iii) an additional One Hundred Thousand Dollars (\$100,000) to Two Hundred Fifty Thousand Dollars (\$250,000) per year beginning twelve (12) months following the Salary Increase Date.

(c) In addition to the compensation provided for in Sections 3(a) and 3(b), on the Effective Date, the Company shall cause to be issued in the Executive's name seventeen thousand one hundred thirty-eight (17,138) shares of the Company's Class B Common Stock (the "Initial Shares"), for the consideration of \$.05 per share. The Executive shall be entitled to receive up to seventeen thousand one hundred thirty-eight (17,138) additional shares of the Company's Class B Common Stock at future dates during the Employment Period as determined in the Board's sole discretion, subject to Executive's fulfillment of certain performance standards established, from time to time, by the Board.

(d) The compensation provided for in Sections 3(a) and 3(b) shall be in addition to any pension or retirement benefits, hospital and medical, disability, and other benefits, if any, made generally available by the Company, in its sole discretion, to its executive officers.

(e) Executive acknowledges that it is the Company's intent to purchase a "key-man" life insurance policy on the life of Executive for the benefit of the Company (the "Insurance Policy"). Executive agrees to cooperate fully in the acquisition, modification, amendment or supplement of the Insurance Policy, including submitting to any physical examination and providing any medical information as may be required by the insurer. In the event Executive dies within the Employment Period, the Personal Representative(s) (the "Personal Representatives") of Executive's estate (the "Estate") shall, at the Personal Representatives' sole discretion, elect to surrender to the Company all right, title and interest in and to the Initial Shares and obtain payment from the Company of the proceeds (the "Proceeds") of the Insurance Policy (the "Election"). The Election shall be in writing and delivered to and received by the Company at its then corporate headquarters within four (4) months from the date of Executive's death. Within seven (7) business days after the Company's dated receipt of the Election, if the Personal Representatives elect to receive the Proceeds, the Personal Representatives shall deliver the Initial Shares (along with executed stock powers) to the Company at its then corporate headquarters at which time the Company shall issue a certified or cashier's check payable to the Estate for the full amount of the Proceeds; provided, however, that if at the time of the Election the Company has not received the Proceeds, and if the Personal Representatives elect to receive the Proceeds, the

Company shall notify the Personal Representatives at such time as it receives the Proceeds, and, upon receipt of such notification, the Personal Representatives shall then be required to tender the Initial Shares to the Company at its corporate headquarters within seven (7) days of said notification, upon which the Company shall comply with the provisions of this Section regarding remittance of the Proceeds. If the Personal Representatives fail to comply with the provisions of the preceding sentence, the Company shall, at its sole discretion, notify the Personal Representatives as to whether it will demand the surrender of the Initial Shares (and make the corresponding payment of the insurance proceeds) no later than nine (9) months from the date of Executive's death or the deadline for filing Executive's Federal estate tax return, whichever occurs later.

(f) The Executive shall be entitled to four (4) weeks paid vacation per year. Such vacation time allowance shall not cumulatively accrue, and any unused vacation time for each year of the Employment Period shall be forfeited by Executive if not used during each year.

4. **Business Expenses.** The Executive shall be reimbursed for all usual and reasonable expenses incurred on behalf of the Company and the Affiliates, as applicable, as approved by the Board, in accordance with Company practices and procedures, provided that:

(a) Each such expenditure is of a nature qualifying it as a proper deduction on the federal and state income tax returns of the Company and any of the Affiliates, as applicable, as a business expense and not as deductible compensation to Executive; and

(b) Executive furnishes the Company with adequate documentary evidence required by federal and state statutes and regulations for the substantiation of such expenditures as deductible business expenses of the Company and of any of the Affiliates, as applicable, and not as deductible compensation to Executive.

Executive agrees that, if at any time, any payment made to Executive by the Company as a business expense reimbursement shall be disallowed in whole or in part as a deductible expense to the Company or any of the Affiliates, as applicable, by the appropriate taxing authorities, Executive shall reimburse the Company or any of the Affiliates, as applicable, to the full extent of such disallowance.

5. **Termination.**

(a) This Agreement may be immediately terminated by the Company at any time during the Employment Period for cause. In such an event of termination, the Company shall be obligated only to continue to pay to Executive his compensation, if any, earned up to the effective date of termination. "Cause" for purposes hereof shall mean (i) a breach of any of the provisions of this Agreement by Executive, (ii) conviction for any criminal offense involving a felony or (iii) willful misconduct, gross negligence or malfeasance.

(b) Except as otherwise provided herein, this Agreement and the obligations of the Company hereunder will terminate upon the death or at the Company's option, the disability

of the Executive. For purposes of this Section 5(b), "disability" shall mean that for a period of four consecutive months or six months in any 12-month period the Executive is incapable of substantially fulfilling the duties set forth in Section 2 or hereafter assigned to him because of physical, mental or emotional incapacity resulting from injury, sickness or disease as determined by an independent physician selected by the Company. Upon any such termination upon death or disability, the Company will pay the Executive or his legal representative, as the case may be, his compensation (including the Initial Shares issuable to Executive pursuant to Section 3(c) above), if any, earned through the date of such termination of employment.

6. Restrictive Covenants.

(a) Executive acknowledges that his services and responsibilities are unique in character and are of particular significance to the Company and to the Affiliates, that the Company and its Affiliates are competitive businesses and Executive's continued and exclusive service to the Company and the Affiliates under this Agreement is of a high degree of importance to the Company and the Affiliates. Therefore, during the Employment Period and for a period of two (2) years thereafter (the "Noncompete Period"), Executive shall not, directly or indirectly, as owner, partner, joint venturer, employee, broker, agent, corporate officer, principal, licensor, shareholder (unless as owner of no more than one percent (1%) of the issued and outstanding capital stock of such entity if such stock is traded on a major securities exchange) or in any other capacity whatsoever, engage in or have any connection with any business which is "competitive" with the Company or any of its Affiliates, and which operates anywhere in the "Restricted Territory" (as hereinafter defined). For purposes of this Agreement, a business will be deemed to be "competitive" with the Company and its Affiliates if it is engaged in the same business that the Company or any of its Affiliates are engaged in, or contemplates engaging in, including, but not limited to, any business engaged in whole or in part in developing, marketing, and implementing technology that allows products and services to be advertised and marketed via the internet. In recognition of the world wide access afforded by the internet, the parties agree that for purposes of this Agreement, "Restricted Territory" shall mean worldwide.

(b) During the Noncompete Period, the Executive shall not:

(i) directly or indirectly, by initiating contact or otherwise, induce, influence, combine or conspire with, or attempt to induce, influence, combine or conspire with, any of the officers, employees or agents of the Company to terminate his, her or its employment or relationship with or to compete against the Company or any of the Affiliates;

(ii) directly or indirectly, by initiating contact or otherwise, divert or attempt to divert any or all of any customers' or suppliers' business with the Company or any of the Affiliates.

(c) If, in any judicial proceedings, a court shall refuse to enforce any of the covenants included in this Section 6, then such unenforceable covenant shall be amended to relate to such lesser scope, period or geographical area as shall be enforceable. In the event the

Company or any of its Affiliates should bring any legal action or other proceeding against Executive for enforcement of this Agreement, the calculation of the Noncompete Period shall not include the period of time commencing with the filing of legal action or other proceeding to enforce this Agreement through the date of final judgment or final resolution, including all appeals, if any, of such legal action or other proceeding unless the Company and the Affiliates are receiving the practical benefits of this Section 6 during such time. The existence of any claim or cause of action by Executive against the Company or any of the Affiliates predicated on this Agreement or otherwise shall not constitute a defense to the enforcement by the Company or any of the Affiliates of these covenants.

(d) Executive hereby acknowledges that the restrictions on his activity as contained in this Agreement are required for the Company's reasonable protection and are a material inducement to the Company to enter into this Agreement. Executive hereby agrees that in the event of the violation by him of any of the provisions of this Agreement, the Company and its Affiliates and its or their permitted assigns (which are intended third-party beneficiaries of these covenants) will be entitled to institute and prosecute proceedings at law or in equity to obtain damages with respect to such violation, to enforce the specific performance of this Agreement by Executive, to enjoin Executive from engaging in any activity in violation hereof, or any combination of the foregoing remedies together with any other remedies available at law or in equity.

7. Treatment and Ownership of Confidential Information.

(a) The parties hereto acknowledge that Executive shall or may be making use of, acquiring and adding to Confidential Information (as that term is defined in subparagraph (b) below). Executive covenants and agrees that during the Employment Period and at all times thereafter he shall not, except with the prior written consent of the Company, or except if he is acting during the Employment Period solely for the benefit of the Company or any of the Affiliates in connection with the Company's or any of the Affiliates' business and in accordance with the Company's business practices and policies, at any time, disclose, divulge, report, transfer or use, for any purposes whatsoever, any of such Confidential Information, including Confidential Information obtained, used, acquired or added by, or disclosed to, Executive prior to the date of this Agreement.

(b) For purposes of this Agreement, the term "Confidential Information" shall mean all of the following materials and information which Executive receives, conceives or develops or has received, conceived or developed, in whole or in part, in connection with Executive's employment with the Company:

The Company's and the Affiliates' materials and information (regardless of the form of such information, including without limitation, in writing, electronic, computerized or other recorded form, oral or visual) concerning, or related in any way to, the Company and the Affiliates' or its or their businesses, including without limitation: (i) the contents of any Business Plan, projections or financial or credit information or data relating to the Company or any of its Affiliates; (ii) the contents of any manuals or written materials of the Company or any of its Affiliates; (iii) the

names and records of actual or prospective clients, customers, suppliers, lenders, financing sources, or related persons; (iv) the terms of various agreements between the Company or the Affiliates and third parties; (v) any data or database, or other information compiled or developed by the Company or its Affiliates; (vi) any computer programs and listings, source codes and/or object codes, file structures, trademarks, trade secrets, patents, patent designs, patent applications, copyrights, forms, procedures, processes, training methods, developments, technical information, marketing activities and procedures and methods of operation, together with any other information, data, know-how or knowledge of a confidential or proprietary nature; and (vii) any information of a type described above derived or obtained from the internet or any website of the Company or its Affiliates, including without limitation, the file structure relating to such website or the content of such website.

(c) Executive covenants and agrees that all right, title and interest in any Confidential Information shall be and shall remain the exclusive property of the Company and the Affiliates, as applicable. Executive agrees to promptly disclose to the Company all Confidential Information developed in whole or in part by Executive within the scope of this Agreement and to assign to the Company or any of the Affiliates, as the Company determines in its sole discretion, any right, title or interest Executive may have in such Confidential Information. Executive agrees to turn over to the Company all physical manifestations of the Confidential Information in his possession or under his control at the request of the Company.

8. Inventions.

(a) Executive agrees to promptly inform and to disclose to the Company, in writing, all inventions, developments, procedures, ideas, innovations, systems, programs, techniques, processes, information, discoveries, improvements and modifications which Executive creates (collectively the "Inventions"), either alone or with others, while in the Company's employ, or while performing services for the Affiliates, whether or not during working hours, and at all times thereafter if the Inventions:

- (i) relate to the present or anticipated business of the Company or any of the Affiliates;
- (ii) relate to any actual or demonstrably anticipated research or development work of the Company or any of the Affiliates;
- (iii) result from any work performed by the Executive for the Company or any of the Affiliates or customers of either; or
- (iv) were invented utilizing the Company's or any of the Affiliates equipment, supplies, facilities, time or any information (whether or not considered Confidential Information) obtained from or useful to the Company or any of the Affiliates.

(b) Assignment. All of the above-described Inventions, and all rights relating thereto, shall be assigned by virtue of this Agreement and without further action by Executive to the Company and shall be and shall remain the exclusive property of the Company.

(c) Ownership. With respect to each Invention assigned to the Company, Executive hereby grants, transfers and assigns to the Company all of his rights, title and interest, if any, in any and all written materials (including but not limited to programmed instructional material), pictorial reproductions, drawings and other graphic representations and works of similar nature upon which he may be engaged in, including rights to translation and reproductions in all forms or formats and the copyrights thereto, if any, and Executive agrees that the Company may copyright said materials in the Company's name and secure renewal, reissues and extensions of such copyrights for such periods of time as the law may permit.

(d) Executive Assistance. During the Employment Period and at all times thereafter, the Executive agrees to assist the Company and the Affiliates in obtaining patents or copyrights on any Inventions assigned to the Company that the Company or any or all of the Affiliates, in the Company's sole discretion, seeks to patent or copyright. Executive also agrees to sign all documents, and do all things necessary to obtain such patents or copyrights, to further assign them to the Company or any of the Affiliates, as applicable, and to protect the Company and the Affiliates against infringement by other parties. Executive agrees that such actions will be without compensation, but at no expense to the Executive.

(e) Attorney-in-Fact. Executive irrevocably appoints any Company-selected designee to act as his agent and attorney-in-fact to perform all acts necessary to obtain patents and/or copyrights as required by this Agreement if Executive (i) refuses to perform those acts or (ii) is unavailable, within the meaning of the United States Patent and Copyright Laws. It is expressly intended by Executive that the foregoing power of attorney is coupled with an interest.

(f) Records. Executive shall keep complete, accurate and authentic information and records on all Inventions in the manner and form reasonably requested by the Company. Such information and records, and all copies thereof, shall be the property of the Company as to any Inventions within the meaning of this Agreement. In addition, Executive agrees to promptly surrender all such original and copies of such information and records at the request of the Company.

9. Executive Representations and Warranties. The Executive represents and warrants to the Company that he is free of known physical and mental disabilities that would, with or without reasonable accommodations that would not create an undue hardship for the Company, impair his performance hereunder and he is fully empowered to enter and perform his obligations under this Agreement. Without limiting the generality of the foregoing, Executive represents and warrants that he is under no restrictive covenants to any person or entity that will be violated by his entering into and performing this Agreement. The Executive shall indemnify the Company on demand for and against any and all judgments, losses, claims, damages, expenses and costs (including without limitation all legal fees and costs, even if incident to appeals) incurred or

suffered by the Company as a result of any breach by Executive of this representation and warranty.

10. **Binding Effect.** Except as herein otherwise provided, this Agreement shall inure to the benefit of and shall be binding upon the parties hereto, their personal representatives, successors, heirs and assigns.

11. **Severability.** Invalidity or unenforceability of any provision hereof shall in no way affect the validity or enforceability of any other provisions.

12. **Governing Law.** This Agreement shall be governed and construed in accordance with the laws of the State of Florida.

13. **Entire Agreement.** This Agreement and the Confidentiality Agreement dated July 9, 1999 by and between iViewit, Inc. (together with its direct and indirect subsidiaries and affiliates) and Executive contains the entire understanding between the parties and this Agreement may not be changed or modified except by an Agreement in writing signed by all the parties hereto.

14. **Notice.** Any notice required or permitted to be delivered hereunder shall be deemed to be delivered when either hand delivered or deposited in the United States mail, postage prepaid, registered or certified mail, return receipt requested, addressed to the parties at the addresses first stated herein, or to such other address as either party hereto shall from time to time designate to the other party by notice in writing as provided herein.

15. **Prevailing Parties.** If any legal action or other proceeding is brought for the enforcement of this Agreement, or because of an alleged dispute, breach, default or misrepresentation in connection with any provision of this Agreement, the successful or prevailing party or parties shall be entitled to recover reasonable attorneys' fees, sales and use taxes, court costs and all expenses even if not taxable as court costs (including, without limitation, all such fees, taxes, costs and expenses incident to arbitration, appellate, bankruptcy and post-judgment proceedings), incurred in that action or proceeding, in addition to any other relief to which such party or parties may be entitled.

16. **Survival.** Notwithstanding any termination of this Agreement, the provisions of Sections 6 through 16 shall survive such termination.

IN WITNESS WHEREOF, this Agreement has been duly signed by the Executive and on behalf of the Company as of the day and year first above written.

EXHIBIT H
PCT US 00 21211

developed image can be enlarged to sizes of between 8"x8" and 8"x12", or to any other appropriate size. The developed image is enlarged to provide additional photo information to scanning device

18. The developed image can be enlarged many times before the granularity of the image is visible to the human eye. An enlargement magnification capability of up to 1700 times or more may be attained for most views or scenes. It is, however, recommended that larger enlargement sizes be obtained for smaller developed images. As mentioned, the step of enlarging may not be necessary in all cases (e.g., where the size of the print film image or developed image is large enough to provide sufficient data to scanning device 18).

and over target frame

At step 58, the enlarged image is scanned by scanning device 18 in order to generate a bitmap image file or other digital image file, such as, JPEG, GIF, or other files. Scanning occurs at a

high scan density (e.g., 100 dpi or more, greater than 200 dpi, or about 600 dpi) to provide a large number of pixels in the resulting digital image file. Contrary to the teachings of the prior art, a large

number of pixels are provided in the digital image file. According to one example, a sufficient number of pixels are provided in the enhanced digital image file to allow a user to magnify the digitized

image in the viewing window of display 30 by a magnification factor of ~~two~~ without pixelation. Alternatively, a sufficient number of pixels are provided to allow the user to magnify the digitized image by a magnification factor of five, ten, twenty, one-hundred, or more.

According to one exemplary embodiment, the number of pixels provided in the enhanced digital image file is based on a viewing window size and the desired magnification ratio. By

different frame size require varying quality image file

which is it

for the end frame size

what's

additional pixels

no. of

1.5x 2x

check file size instantly time/file size

providing more pixels in the enhanced digital image file than is required for a full-window view in the viewing window, the user is able to zoom and pan within the digital image during viewing without pixelation.

5 FIG. 7 illustrates relationships between a source image (e.g., a scanned print film image), a viewing window (e.g., a portion of display 30), a viewing image (e.g., a subset of pixels from the source image to be displayed in the viewing window), and a target image (e.g., the enhanced digital image file). The following
10 parameters and description are for the purpose of creating large, clear, zoomable and panable images from a variety of photographic, non-digital source images.

The source image (si) has a source image height (sih) and a source image width (siw). Thus, the source image aspect ratio (siar) can be determined as:

15 (siar) can be determined as:

$siar = sih/siw$

1/5 is a viewing window a display not made of pixels, i.e. TV.

20 The viewing window (vw) is the window defined in pixels, within which is to be displayed the source image. The viewing window (vw) has a viewing window height (vwh) and a viewing window width (vww), both defined in pixels. Thus, the viewing window aspect ratio can be determined as:

$vwar = vwh/vww$

this could be striken

or etc...

It is noted that the source image (si) may have a different aspect ratio than the viewing window (vw). To place the source image (si) in the viewing window (vw), a subset of pixels

trying to solve for unknown by unknown

from the source image (si) must be selected and scaled. The viewing image height (v_{ih}) and viewing image width (v_{iw}) within viewing window (vw) can be determined by comparing the source image aspect ratio (s_{iar}) to the viewing window aspect ratio (v_{war}),

as shown:

This relationship is illustrated in FIG. 7. Note that the

source image (si) will be scaled to fit within the viewing window (vw). When zooming into the image, the targeted portion of the zoomed image will fill the viewing window (vw) as described below.

The magnification factor (mf) is defined as the ratio of the viewing image to the target image. This ratio will determine the amount of zoom available without causing the image to distort due to fewer pixels in the image being displayed than available in the display medium. For a magnification factor (mf), a target image size (tis) having a target image width (tiw) and a target image height (tih) can be determined as the magnification factor (mf) times the viewing image size (vis):

VI / TI } what size?

$\frac{T}{V} = mf$

$\frac{VIS}{TIS} = MF$

$\frac{VIS}{TIS} = MF$

$TIS = \frac{VIS}{MF}$

$vis = v_{iw} * v_{ih};$
 $tis = tiw * tih = vis * mf$

$\frac{VIS}{TIS} = MF$

$\frac{VIS}{TIS} = MF$

To obtain the target image height and width:

$TIS = VIS$
 $TIS = \frac{VIS}{MF}$

$VIS = TIS * MF$

$vis = tis * mf$
 $vis = 7 * 15$
 $vis = 105$

$$TIW^2 = \frac{TIH}{SIAR}$$

$$SIAR \times TIW^2 = TIH$$

$$SIAR = \frac{TIH}{TIW^2}$$

$$SIAR = \frac{TIH}{TIW}$$

$$SIAR = TIAR$$

$$tiw = \sqrt{\frac{tis}{siar}}$$

and

$$TIW^2 = \frac{TIH}{SIAR}$$

$$\frac{TIH}{TIW} = SIAR$$

$$tis = tiw \times siar$$

SIAR = TIAR - IS THIS INTENDED?

$$\frac{TIW^2}{SIAR} = \frac{TIH}{SIAR} \quad (TIH \times TIW)$$

$$\frac{1}{SIAR} = \frac{TIH}{1}$$

what about cropping
letterbox formats
stretching
what about a SI that is 8x6 and you enlarge it to 8x10.

The relationship between the target image and the viewing image is shown in FIG. 7. The relationship between the target image and the viewing window is also shown. A zoom to the maximum level will be shown in the viewing window as illustrated at drawing 120. By panning the viewing window, every portion of the target image may be viewed from each level of zooming.

To determine the minimum scan density (msd) to avoid pixelation at the desired magnification factor (mf):

$$msd = \frac{tis}{mf}$$

$$msd = \frac{100}{8} = 12.5$$

why is the mf part of this equation?
Explain where's dpi?

EXAMPLE 1

Determine the target image size and dimensions, and minimum scan density for the following case:

- Source Image = 4" x 6"
- Desired Magnification Factor = 20
- Source Image Aspect Ratio = 4/6 = 0.8

Define the Viewing Window: assume 320h x 480w pixels

$$\text{Viewing Window Aspect Ratio} = 320 / 480 = 0.75$$

The Source Image Aspect Ratio is > the Viewing

$$\frac{4}{6} \quad (SIAR)$$

Atty. Dkt. No. 57103/120

Window Aspect Ratio:

0.8 > 0.75 therefore:

$v_{ih} = v_{wh} = 320$ pixels

$v_{iw} = v_{wh} / 0.8 = 320 / 0.8 = 400$ pixels

should be v_{wh} on p. 19

The Viewing Image size = $v_{is} = 320 \times 400 = 128,000$

pixels - *how does this equate to other, non-pixel, display mediums*

The Target Image size = $v_{is} \times 20 = 128,000 \times 20 = 2,560,000$ pixels $TIS = \frac{v_{is}}{MF}$

$TIS = \frac{128,000}{.20}$

need to reconcile this w/ formula on p. 14

The Target Image width = $\sqrt{2,560,000 / 0.8} = 1789$ pixels

The Target Image height = $1789 \times 0.8 = 1431$ pixels

$TIW = \sqrt{\frac{TIS}{SIAR}} = \sqrt{\frac{2,560,000}{.8}} = \sqrt{3,200,000} = 1789$

is the formula on p. 13 is right?

The Minimum Scan Density = $1789 / 5 = 358$ pixels per inch
 $1789 / 4 = 447.25$

The photo scan can be any scan density > ~~357~~ pixels per inch
 447.25

447.25

Thus, a 4" x 5" print film image should be scanned at greater than ~~357~~ pixels per inch to allow magnification/zoom up to 20 times in a viewing window of 320 x 240 pixels. An enhanced digital image file having 2,560,000 pixels provides a sufficient number of pixels for this example.

EXAMPLE 2

Determine the Target Image size and dimensions, and minimum scan density for the following case:

Atty. Dkt. No. 57103/120

Source Image = $4'' \times 5''$

Desired Magnification Factor = 20

Source Image Aspect Ratio = $4 / 5 = 0.8$

Define the Viewing Window: assume 360h x 400w pixels

Viewing Window Aspect Ratio = $360 / 400 = 0.9$

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

$0.8 < 0.9$ therefore:

$v_{1w} = v_{ww} = 400$ pixels

$v_{1h} = \frac{v_{1w}}{V_{WW}} \times 0.8 = 400 \times 0.8 = 320$ pixels

The Viewing Image size = $v_{1s} = 320 \times 400 = 128,000$ pixels

The Target Image size = $v_{1s} \times 20 = 128,000 \times 20 = 2,560,000$ pixels

Where is this relationship defined

The Target Image width = $\sqrt{2,560,000 / 0.8} = 1789$ pixels

The Target Image height = $1789 \times 0.8 = 1431$ pixels

The Minimum Scan Density = $1789 / 5 = 358$ pixels per inch

p. 15 MSF = $T_{1h} / S_{1H} = 1431 / 4 = 357.75$

The photo scan can be any scan density > ~~358~~ pixels per inch
357.75

Atty. Dkt. No. 57103/120

EXAMPLE 3

Determine the Target Image size and dimensions, and minimum scan density for the following case:

Source Image = $5'' \times 4''$ (portrait orientation)
 Desired Magnification Factor = 20
 Source Image Aspect Ratio = $5 / 4 = 1.25$

~~5 = H~~
~~4 = W~~
 5 = H
 4 = W

Define the Viewing Window: assume 360h x 400w pixels
 Viewing Window Aspect Ratio = $360 / 400 = 0.9$

The Source Image Aspect Ratio is $>$ the Viewing Window Aspect Ratio:

$1.25 > 0.9$ therefore:

$v_{ih} = v_{wh} = 360$ pixels

$v_{iw} = \frac{v_{ih}}{1.25} = 360 / 1.25 = 288$ pixels

The Viewing Image size = $v_{is} = 360 \times 288 = 103,680$ pixels

The Target Image size = $v_{is} \times 20 = 103,680 \times 20 = 2,073,600$ pixels

The Target Image width = $2,073,600 / 1.25 = 1288$ pixels

The Target Image height = $1288 \times 1.25 = 1610$ pixels

The Minimum Scan Density = $1288 / 4 = 322$ pixels per inch

$MSD = t_{ih}/s_{ih} = 1288/5 = 257.6$

The photo scan can be any scan density $>$ ~~322~~ pixels per inch

257.6

Thanks.

-Jim

.....
[Faded, illegible text at the bottom left]

Atty. Dkt. No. 57103/120

determined by comparing the source image aspect ratio (sir) to the viewing window aspect ratio (vwr), as shown:

if $sir < vwr$ then:

$$vih = vwh$$

5 $viw = vih * sir$

but if $sir \geq vwr$ then:

$$viw = vww$$

$$vih = viw / sir$$

This relationship is illustrated in FIG. 7.

10 Note that the target image (ti) is created from the source image (si), by scaling the image (si) down to fit within the viewing window (vw). When the target image (ti) is scaled down by the desired maximum magnification factor (mmf) to fit within the viewing window (vw), the scaled target image is called the viewing image (vi).

15 The maximum magnification factor (mmf) is defined as the ratio of the target image area (tia) to the viewing image area (via). This ratio will determine the amount of zoom available without causing the image to distort due to pixelation, i.e., when fewer pixels are in the viewing image being displayed than available in the viewing window.

20 So:

$$\text{target image area (tia)} = tiw \times tih$$

and since

$$via = viw \times vih$$

then

25 $tia = via \times mmf$

To obtain the target image width and height:

$$tiw = \text{squareroot}(tia * sir)$$

$$tih = tiw / sir$$

30 The relationship between the target image and the viewing image is shown in FIG. 7. The relationship between the target image

Atty. Dkt. No. 57103/120

and the viewing window is also shown. A zoom to the maximum level will be shown in the viewing window as illustrated at representation 120 of FIG. 7. By panning the viewing window, every portion of the target image may be viewed from each level of zooming.

5 To determine the minimum scan density (msd) to avoid pixelation at the desired maximum magnification factor (mmf):

$$msd = th/sih. = t/w/siw$$

EXAMPLE 1

Determine the Target Image Area and dimensions, and minimum scan density for the following case:

Source Image = 5" wide x 4" high

Desired Magnification Factor = 20

Source Image Aspect Ratio = 5 / 4 = 1.25

Define the Viewing Window: assume 480w x 320h pixels

15 Viewing Window Aspect Ratio = 480 / 320 = 1.5

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

1.25 < 1.5 therefore: v/h

$$vih = vwh = 320 \text{ pixels}$$

$$viw = vwh * 1.25 = 320 * 1.25 = 400 \text{ pixels}$$

20 The Viewing Image Area = vis = 320 x 400 = 128,000 pixels

The Target Image Area = vis x 20 = 128,000 x 20 = 2,560,000

pixels

$$TIN = \sqrt{2560000 * 1.25} = 1789$$

The Target Image width = 2,560,000 / 0.8 = 1789 pixels

The Target Image height = 1789 x 0.8 = 1431 pixels $TIN = \frac{1789}{1.25} = 1431$

WRONG EXPRESSIONS USED

25 The Minimum Scan Density = 1789 / 5 = 358 pixels per inch

The photo scan can be any scan density > 357 pixels per inch

1431/5 = 358
OK

Thus, a 5 x 4" print film image should be scanned at greater than 357 pixels per inch to allow magnification/zoom up to 20 times in a viewing window of 320 x 240 pixels. An enhanced digital

480 x 320

Atty. Dkt. No. 57103/120

image file having 2,560,000 pixels provides a sufficient number of pixels for this example.

EXAMPLE 2

Determine the Target Image Area and dimensions, and minimum scan

- 5 density for the following case:

Source image = 5" x 4" \rightarrow state which is height & which is width.

Desired Maximum Magnification Factor = 20

Source Image Aspect Ratio = 5 / 4 = 1.25

Define the Viewing Window: assume 400w x 360h pixels

- 10 Viewing Window Aspect Ratio = 400 / 360 = 1.11

The Source Image Aspect Ratio is > the Viewing Window Aspect Ratio:

1.25 > 1.11 therefore:

$v_{iw} = v_{ww} = 400$ pixels

$v_{ih} = v_{iw} / 1.25 = 400 / 1.25 = 320$ pixels

- 15 The Viewing Image Area = $v_{ia} = 400 \times 320 = 128,000$ pixels

The Target Image Area = $v_{ia} \times 20 = 128,000 \times 20 = 2,560,000$ pixels

wrong expression used \rightarrow The Target Image width = $2,560,000 \div 1.25 = 1789$ pixels $T_{IW} = \sqrt{2,560,000 \div 1.25} = 1789$

The Target Image height = $1789 / 1.25 = 1431$ pixels

The Minimum Scan Density = $1431 / 4 = 358$ pixels per inch \rightarrow correct

- 20 The photo scan can be any scan density > 357 pixels per inch

EXAMPLE 3

Determine the Target Image Area and dimensions, and minimum scan

density for the following case:

Source Image = 4" wide x 5" high (portrait orientation)

- 25 Desired Magnification Factor = 20

Source Image Aspect Ratio = 4 / 5 = 0.8

Define the Viewing Window: assume 400w x 360h pixels

Viewing Window Aspect Ratio = 400 / 360 = 1.11

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

Atty. Dkt. No. 57103/120

0.8 < 1.11 therefore:

$$v_{ih} = v_{wh} = 360 \text{ pixels}$$

$$v_{iw} = v_{ih} * 0.8 = 360 * 0.8 = 288 \text{ pixels}$$

The Viewing Image area = $v_{ia} = 360 \times 288 = 103,680$ pixels

5 The Target Image area = $v_{ia} \times 20 = 103,680 \times 20 = 2,073,600$ pixels

Wrong Expression USED → The Target Image width = $2,073,600 * 0.8 = 1288$ pixels $T_{iw} = \sqrt{2,073,600 * 0.8} = 1298$

The Target Image height = $1288 / 0.8 = 1610$ pixels

The Minimum Scan Density = $1610 / 5 = 322$ pixels per inch

The photo scan can be any scan density > 321 pixels per inch

10 Returning now to FIG. 2, at step 60, the enhanced digital image file is provided to computer 22 in a digitized format, i.e., pixel-based, bitmapped, etc. (as opposed to vector graphics based format), such as in either in a bitmap BMP format or a compressed JPEG format. Computer 22 performs a touch-up operation on the scanned image in
 15 order to make refinements or enhancements thereto. This touch-up operation is accomplished by utilizing imaging software. Touch-up steps may include cleaning the edges of the image, adjusting lighting, adjusting colors, etc. Adobe PhotoShop software, manufactured by Adobe Systems Inc., San Jose, California, can be used as the imaging
 20 software for touching up the images.

According to one example, multiple images can be stitched together after scanning, and before or after compression, thereby creating a panoramic scene or image, or simply a scene requiring a plurality of photographs. This stitching operation can be performed by
 25 utilizing photo stitching software such as, for example, Photo Vista software by Live Picture, Live Picture Reality Studio or Live Picture Object Modeler. Stitching may comprise sufficient photos for a 360 degree panoramic image of a scene. If images are stitched, they may be touched-up at step 60.

Atty. Dkt. No. 57103/120

At step 62, if desired, and if the enhanced digital image file has not yet been compressed (e.g., by scanning device 18 or the touch-up software), the image is then converted from a bitmap file format (e.g., BMP) to a compressed file format (e.g., JPEG). Other compression algorithms are contemplated. Adobe Image Ready software is utilized to perform the BMP-to-JPEG file conversion in this exemplary embodiment. The compression is set to a very high compression factor, such as, 70% to 90%, but may alternatively be set to other compression factors. The target image area be set as one of the parameters for compression, thus ensuring an optimum compressed file size.

At step 64, user interface or control data is associated with the enhanced digital image file. The user interface data is a program or code segment (e.g., a Java applet) that provides a graphic user interface on display 30 upon loading of the image. The user interface program is associated with the enhanced digital image file such that the combined file or files can automatically launch the graphic user interface, decompress the digital image data, and display at least a portion of the digital image data within a viewing window having a predetermined viewing size on display 30.

The user interface data may alternatively be a plug-in, applet, or other software program, such as, Photo Vista, Reality Studio, or Object Modeler manufactured by Live Picture Inc., San Francisco, California, or an Ipix plug-in manufactured by Internet Pictures Corporation of Oak Ridge, Tennessee. The user interface data may be either associated with the enhanced digital image file such that it is downloaded with the enhanced digital image data, or it may be launched independently from the enhanced digital image data as, for example, an applet or plug-in on user computer 28. If the user interface data is launched independently of the image data, it may either be first opened by the user before downloading the enhanced digital image file, or it may

Atty. Dkt. No. 57103/120

be automatically opened by the enhanced digital image file, such as, via a script or other code segment within the enhanced digital image file.

Referring to FIG. 3, an exemplary screen print 80 from display 30 is shown illustrating the graphical user interface 82 generated by the user interface program. User interface 82 includes a viewing window or frame 84 for displaying the digital image data 86. User interface 82 further includes zoom buttons 88 for allowing the user to zoom into and out of digital image data 86. By actuating one of zoom buttons 88, user interface program resizes digital image data 86 within viewing frame 84. User interface 82 further includes panning buttons 90 to allow the user to pan up, down, left, and right within image data 86.

Once the user interface program is associated with the enhanced digital image data, the resulting image is ready for providing to a network server, projection from a projector, display system, posting, or playback, to or from a host computer, a Web server, a Web site, or a Web page. At step 66, the enhanced digital image is uploaded to a network server. In the instance where the enhanced digital image is posted to an Internet Web server, the upload from computer 22 to the respective server can be performed by utilizing file uploading software, such as, Web FTP (file transfer protocol) Pro software, manufactured by Ipswitch, Inc., Lexington, Massachusetts.

Referring now to FIGS. 3, 4, and 5, exemplary print screens are shown illustrating the result of an upload or download of the enhanced digital image file to user computer 28 for display on display 30. In FIG. 3, digital image data 86 of a collectible stamp image is shown within a viewing window 84. Although viewing window 84 is slightly smaller than the full-screen size of display 30 (e.g., 640 x 480 pixels in this example), viewing window 84 can alternatively be configured for full-screen display, or display in other sizes or resolutions. As shown, digital image data 86 shows no sign of pixelation.

Atty. Dkt. No. 57103/120

In FIG. 4, a user has actuated zoom buttons 88 to zoom-in to the digital image. In response, the user interface program provides additional digital image data from the enhanced digital image file stored in a memory (e.g., a hard drive) of user computer 28, to provide a zoomed view of the digital image. Thus, the view of FIG. 4 also shows little sign of pixelation even though the image has been magnified many times.

In FIG. 5, a user has actuated pan buttons 90 to display the lower left-hand corner of the digital image data within viewing window 84. The user has also actuated zoom buttons 88 to zoom-in to the digital image data. Again, little pixelation is visible.

As mentioned, the principles described herein are also operable with a digital image taken by a digital camera. Referring now to FIG. 6, a method 100 of providing an enhanced digital image file utilizing a digital camera is shown. At step 102, the digital camera is configured to acquire a digital image. In this step, the camera is set with a high resolution to acquire at least enough pixels for a magnification of two times the size of the viewing window provided on display 30, though higher numbers of pixel data may also be acquired.

Again referring to FIG. 7 and the corresponding description hereinabove, with a digital source image, the maximum magnification factor (mmf) should not produce a target image larger than the source image in pixels because of the pixel distortion or pixelation effect, i.e., distortion due to fewer pixels in the image being displayed than available in the viewing window. Since:

$$\text{target image area (tia)} = \text{tiw} \times \text{tih} = \text{via} \times \text{mmf}$$

then to obtain the target image width and height:

$$\text{tiw} = \sqrt{\text{tia} \times \text{sir}}$$

$$\text{tih} = \text{tiw} / \text{sir}$$

If $\text{tih} > \text{sih}$ then set $\text{tih} = \text{sih}$ and $\text{tiw} = \text{siw}$

need the square root

Atty. Dkt. No. 57103/120

EXAMPLE 4

Determine the Target Image size and dimensions, and minimum scan density for the following case:

Source Image = 1600×1200 pixels

Desired Magnification Factor = 20

Source Image Aspect Ratio = $1600 / 1200 = 1.33$

Define the Viewing Window: assume 480w x 360h pixels

Viewing Window Aspect Ratio = $480 / 360 = 1.33$

The Source Image Aspect Ratio is = the Viewing Window Aspect Ratio:

0.75 = 0.75 therefore: $> 1.33 = 1.33$

$v_{ih} = v_{wh} = 360$ pixels

$v_{iw} = v_{ih} * 1.33 = 360 * 1.33 = 480$ pixels

The Viewing Image area = $v_{ia} = 480 \times 360 = 172,800$ pixels

The Target Image area = $v_{ia} \times 20 = 172,800 \times 20 = 3,456,000$ pixels

The Target Image width = $\sqrt{3,456,000 * 1.33} = 2147$ pixels

The Target Image height = $2147 / 1.33 = 1610$ pixels

But t_{ih} of 1610 pixels is > 1200 pixels therefore:

$t_{ih} = 1200$ pixels

$t_{iw} = 1600$ pixels

$t_{ia} = 1200 \times 1600 = 1,920,000$ pixels

Effective Maximum Magnification Factor = t_{ia} / v_{ia}
 $= 1,920,000 / 172,800 = 11.1$

The Minimum Scan Density = N/A

Steps 104 (touch-up image), 106 (compress file), 108

(associate user interface data), and 110 (upload file) may proceed as described with reference to FIG. 2 in the print film image exemplary method.

The above method can be repeated using different depth images or digital photographs for the images in order to create areas of higher resolution or "hot spots" within an image for detailed close-up

wrong expression

Why always ASD at all? It's not applicable. If a digital image is printed and later scanned, then you will follow the math steps for print, not the steps for digital.

1 camera with you at any of those meetings? 199

2 A. I didn't take a camera with me.

3 Q. Now, going back to the Iviewit
4 technologies, the heart of the company's
5 property, intellectual property, was there ever
6 any concern expressed to you, as COO and
7 president of the company, concerning the math,
8 the poor math that was submitted to the patent
9 office with errors? Is there anyone who
10 expressed any concern to you about that?

11 MR. PRUSASKI: Object to the form.

12 THE WITNESS: There was a dispute as
13 to the consistency of the mathematical
14 representation, not to accuracy.

15 By MR. SELZ:

16 Q. Okay. So it wasn't dealing with the
17 accuracy of the math or computational errors; it
18 was dealing with whether or not the math properly
19 applied the processes involved?

20 A. No. It was, I said, consistency.

21 Q. Consistency, okay. Well, explain to
22 me what you mean by consistency, then, sir, so I
23 can understand.

24 A. Well, there may be several different
25 ways of deriving the same number, and it could be

1 derived using one form in one place and another 200

2 form in another place. The result is always the
3 same and both forms are accurate.

4 Q. But they're not consistent?

5 A. They are not -- they don't show the
6 same format, but the values and the value derived
7 is always the same. It is mathematically
8 correct.

9 Q. Okay. So did anyone ever express to
10 you a concern about those particular issues?

11 A. There was a concern expressed, yes.

12 Q. By who?

13 A. By Eliot Bernstein.

14 Q. How about Murice Buchsbaum, did he
15 ever express any concern to you about the math
16 submitted?

17 A. Murice Buchsbaum didn't understand
18 the math.

19 Q. Okay. So he never, he never
20 expressed any concern to you then?

21 A. Not on that score.

22 Q. Did the board of directors ever
23 question you about the patent materials submitted
24 or any problems with the patent submitted to
25 these intellectual property rights?

1 A. No.

2 MR. PRUSASKI: Object to the form.

3 By MR. SELZ:

4 Q. Did you ever discuss with the board
5 of directors any of the problems with Foley &
6 Lardner or Meltzer Lippy's work with regard to
7 the patent?

8 A. I don't recall discussing any
9 problem with respect to Foley & Lardner's work
10 because I don't recall any problem with Foley &
11 Lardner's work.

12 Q. Okay. How about Meltzer Lippy, I
13 think you described yesterday, there were some
14 concerns; were those discussed with the board of
15 directors?

16 A. The work done with Meltzer Lipper,
17 was done mostly before my time.

18 Q. What about the part that was done
19 during your time, were you concerned about any of
20 the quality of the work that was performed or any
21 problems you felt might arise from that work?

22 A. I did not, during that time,
23 discover any problems.

24 If I may ask the question, I'm
25 puzzling here to understand why this form of

1 questioning is relevant to the Proskauer
2 litigation?

202

3 Q. Well, actually, sir, and I don't
4 mean to be impolite in any manner whatsoever, but
5 the role here for you is not really to ask these
6 questions, but rather to answer the questions
7 that are posed. So, although I appreciate your
8 concerns, that's not something really for you to
9 determine, but rather for posing counsel to bring
10 before the court, if these matters should ever be
11 submitted.

12 So, again, I'm not attempting to be
13 rude or impolite in any manner, but these are the
14 questions we can pose to you and you are duty
15 bound to answer them.

16 MR. PRUSASKI: I would just say to
17 some extent, because he's not represented here, I
18 think he's got the right to --

19 MR. SELZ: He doesn't have any right
20 to object. And you know, Chris, you and I both
21 know, that even if you object to the form of a
22 question or relevancy, the witness still has to
23 answer it.

24 MR. PRUSASKI: I agree, and I think
25 Mr. Utley knows that he needs to answer the

1 questions, but I think because he's not 203

2 represented, to some extent, he does have the
3 right to question the relevancy.

4 MR. SELZ: Well, I mean, he can
5 object based on the relevancy or you can object
6 based on the relevancy, but he cannot question
7 the validity of what I'm asking based on a
8 relevancy objection.

9 MR. PRUSASKI: Okay. I just think
10 that his last comment was basically just a lay
11 person's objection to the relevance.

12 MR. SELZ: That's fine. I mean, you
13 know --

14 MR. PRUSASKI: And I'd like to
15 state --

16 MR. SELZ: I don't even know if he
17 has standing to interpose an objection because
18 he's not a party to the case. So, well, I guess
19 whatever, but the bottom line is we'll proceed so
20 we can hopefully get through this as quickly as
21 possible and release Mr. Utley from his
22 obligations here.

23 MR. PRUSASKI: Okay. And I'd like
24 to join Mr. Utley with objecting to the relevance
25 of the question too. Go ahead.

1 MR. SELZ: (No response.) 204
2 MR. PRUSASKI: Steve?
3 MR. SELZ: Yeah, I'm still here.
4 MR. PRUSASKI: Okay. Go ahead when
5 you're ready. I guess we're done.
6 MR. SELZ: You're done with your
7 objections. Okay, fine.
8 MR. BERNSTEIN: Could somebody
9 repeat the last question for me, please.
10 MR. SELZ: The last question was are
11 you, are, were you aware of any situations
12 according to -- Madam Court Reporter, actually if
13 you could do me a favor, if you read back that
14 last question, I would appreciate it.
15 (Whereupon, the requested portion
16 was read back.)
17 MR. SELZ: That's fine, thank you.
18 By MR. SELZ:
19 Q. Did Foley & Lardner ever discuss
20 with you any potential errors in the patents and
21 any potential liabilities that would arise from
22 those errors?
23 MR. PRUSASKI: Object to the form.
24 Assumes facts not in evidence.
25 MR. SELZ: Well, let me start off

1 with the basic question then.

205

2 By MR. SELZ:

3 Q. Did Foley & Lardner ever advise you
4 that there were any errors in the patents?

5 A. No.

6 Q. So, then, they never advised you of
7 any liabilities or any errors that might arise
8 from any errors because there weren't any; is
9 that your testimony is today?

10 A. They never advised me that there
11 were any errors in the patents.

12 Q. Okay. Now, with regard to the
13 Proskauer Rose billing, you had indicated that
14 you had authorized certain payments to be made
15 and Mr. Prusaski had showed you a series of
16 letters sent to you by Chris Wheeler and your
17 responses on a couple of those.

18 Were those payments ever authorized
19 by the board of directors of Iviewit?

20 A. The board of directors normally does
21 not become involved in the administration of
22 accounts receivable and accounts payable.

23 Q. Okay. Well, you, in your own
24 testimony, sir, indicated that the company was in
25 a cash poor position; is that true?

Eliot I. Bernstein

From: Eliot I. Bernstein [alps1@bellsouth.net]**Sent:** Wednesday, August 09, 2000 11:10 AM**To:** Douglas Boehm (E-mail); James F Armstrong (E-mail); Simon L. Bernstein (E-mail); brian@iviewit.comwww.iviewit.com

Doug - As you can imagine I am a bit upset myself with last Friday's conversations but for different reasons. I have made not one single unfounded accusation. My remarks were based on facts. If you read the transcript what initiated that call was that when we received the patent that was filed, many of our changes were not incorporated. Most of the changes in the math that we spent the entire day with you laboring over were not incorporated in the patent. The math had fundamental errors still such as missing square roots etc. Also, if you listen to the tapes you will find that Brian was also upset that the math that he had sent several days earlier was also not included. Therefore, we seem to see wild accusations as separate items.

I would have liked to have more time to review the patent myself but you and Steve were working with Brian and I did not really have time to review until the week prior to filing when I first received the first draft. This gave me very little time to review prior to filing, so I am unclear as to how I could have done things any faster as you said in your letter. I figured we had established most of the meat of the invention when you came to our offices several months ago and that the final patent would have been well thought out, and that the math would be correct and tested. When I received the first draft of the filing, again, we had failed to cover zoom without pixelation. When I saw the complexity of the math, I asked my friend to explain it to me. What Jim found were huge errors that we spent our entire day reviewing with you. We agreed to those changes and we trusted that they would be incorporated in our filing. They were not. You now refer to these as minor changes but while we first reviewed them you called them very significant.

As you articulately pointed out, I am neither a patent attorney nor an engineer nor a mathematician, so I have hired people I do trust. What was shocking to me as naive as I may be was that these were items that were discussed to full understanding and yet they remained wrong. You cannot argue that there is much wrong with my anger since it remains founded in facts. Anger is associated with fear, and this seemed to put me and my partners in danger because of the errors. Thus, I re-acted to these facts by asking Steve what liabilities we would now encumber and this is of major concern to my shareholders etc. if there were liabilities that arose.

Regarding the patents Ray filed, it was you and Steve that pointed out that there could be problems in Ray's filings. Again, I re-acted in fear. How can the people we are entrusting to our inventions fail to serve us well? Thus, I alerted those involved and you presented your position on Ray Joao since you were the one who made the accusations in the first place. After listening to you we had decided to go back and amend Rays application to claim priority of all matter to that initial date. When we talked with Steve it was unclear if we were still on that same path and that

was because of the bar date. We revisited the bar date issue and it became unclear as to whether it was September or August based on Centrack. When we noticed that the math and illustrations were not based on the stuff Brian had sent you we asked Steve to explain, he had no answer as to why it had been filed without it. Then, if you listen to the tapes, you will see that Brian was very upset that these changes had not been entered. He was shocked and so expresses his emotions on the tape. Have you written him an angry letter, calling him a wildcard that has unfounded accusations.

As to holding the meeting without you, we were very concerned about the mistakes in the filing and we did try several times to call you. Per Steve and your secretary it was determined that you were totally unreachable by any communication methods. We did not know that this was a foul and had Steve felt uncomfortable he should have passed on the call or brought Bill Dick in.

I have not gone behind your back and made accusations, I am simply trying to understand why the filing was missing the corrections we had worked on, and why Brian's math he had sent days earlier was not included and what this would expose us to. If the math mistakes were critical, it would have been I who would have had to explain to our board why their investments may have not been adequately protected. How would you feel in that position?

Since these items that will be corrected are in fact mistakes and not accusations of mistakes, I fail to understand why your retort appears so hostile. Why you feel the need to attack my personality etc. The point of Friday's conversation was to make changes where change is due and move forward, together. We asked for a clear and concise letter addressing these and other issues that would help clear up the mistakes etc.

I do understand why you want to seek wrath against me or my company for founded factual mistakes, made on your part. I was expecting an apology from you as to why this occurred in the first place, not a letter accusing me of any wrong doings. I did nothing wrong. I feel that the bill for that filing should instead be reduced for the time and effort that was wasted and will be further wasted fixing the errors.

I am a little confused by the statement; "Since you seem to have a predisposition to sue your patent lawyers, I now have to religiously follow all of our firms practices and procedures for documenting everything I say and do with you." Why were we not doing this all along, as it seems a practice of the firm to protect your clients and why would this subject me to additional rates?

I am also puzzled as to why you chose to write me directly and not include the other people involved in this matter. First, Brian was also very upset and puzzled by this. Brian, unlike me, has good knowledge in this arena; he has been hired to handle the intellectual property of the firm. If anyone has failed to understand any of the things you have mentioned, you must confront him. Brian has been working with you to develop and cultivate the property; if we are in the dark you must confront him. I am naive in this world and this is why I have entrusted both him and you to protect the company. Also, my father was on the phone and Jim Armstrong and neither have felt that I did anything wrong or unjust. Thus, I feel obligated to let them respond to your letter as well.

I am sorry for your feeling that I have accused you of wrong doings. I was just upset with the facts of the matter and may have seemed scared and afraid. I like both Steve and yourself and do appreciate all you have done. It does not negate the problems though. I am unsure of how you

want to proceed with the firm but I think this need to be handled by all involved parties.

Best regards,

Eliot

Subject: PERSONAL AND CONFIDENTIAL

PERSONAL AND CONFIDENTIAL
ATTORNEY-CLIENT PRIVILEGED

Eliot--

I need to discuss something personally with you that is very important to our working relationship. I am sending this via e-mail and only to you, without copying Brian or anybody else, so whether you share it or not is entirely up to you. Please take the time to read and consider the following.

I am very upset with the way you handled the situation at last Friday's teleconference with Steve Becker regarding the latest patent application filing, and I am particularly offended by your exaggerations, accusations, and criticisms of our work. I listened to the tape of the teleconference, and I was shocked.

First, you know that I am the Foley & Lardner partner responsible for Iviewit work, and Steve Becker is the associate who reports to me. I can't believe that you decided to hold that teleconference Friday with Steve without me being present. That was really low. If you want to fly off the handle and jump to conclusions without talking to Brian first, that's your business. But when it comes to making accusations about the quality of my work product to my associate, that's my business.

Second, Steve and I have consistently put 110% effort into everything we have done for you. Last week, I put in 200% effort, flying down to Florida on short notice so you can hold a meeting to figure out if you were going to sue your former patent attorney, having me spending all the next day with your investment bankers, and then spending the night in the O'Hare airport and coming directly to work the very next day to revise and file a patent application for you by midnight. I don't know very many people that would have done that for a client. Now you get all bent out of shape over a few minor math mistakes -- which are readily correctable.

Third, during the Friday teleconference, you accused us of changed strategies, filing delays, and huge mistakes. If there were any strategy changes, they were partly your fault -- because you don't understand what's happening on the IP side of your business, even though we have tried to explain it all to you many times. But that's fine if you trust your people. You have excellent people working with you, but you simply don't listen to us. Instead, you make wild accusations and inflammatory statements about things you know nothing about. The delays and the mistakes were also, to a large extent, your fault. Had you gotten Jim involved earlier, had you worked closer with Brian to understand the math, had you spent more time reviewing the application drafts, then perhaps none of this would have happened. You can't just sit back now and blame us. Sorry, but I won't put up with it.

Fourth, you have strained our working relationship. We now have to tape each others' telephone conversations so we can point fingers and threaten to sue each other? What kind of a working relationship is that? I figured out from day one that you were a wildcard, but I didn't mind that, because I can relate to wildcards. A lot of brilliant inventors are wildcards. I have even been accused of being a wildcard myself. But just because you're a wildcard doesn't mean you have the right to make unfounded accusations and cut people off at the knees.

I'm afraid this latest episode is going to cost you. Steve Becker won't work on any Iviewit matters any longer for me. That's going to cost you an additional \$40.00 per hour in legal fees, now that I have to do the work myself. Since you seem to have a predisposition to sue your patent lawyers, I now have to religiously follow all of our firms practices and procedures for documenting everything I say and do with you. That's going to take me extra time and cost you extra money. Foley & Lardner raises its billing rates on September 1st, and I was previously considering discounting our rates for Iviewit as I have done in the past. After all of your accusations, I don't have any inclination to do so. I've also been dragging my feet on providing you with our bills, as a favor to you and Brian, since I knew you were cash-strapped. No more. I'm sending your bills as soon as I can. I have somehow lost my motivation to get into hot water with my firm for such an unappreciative client.

The way I see it, you owe us an apology. Steve worked many long, frustrating hours trying to pull an invention out of your head and get it down on paper. Apparently Ray Joao had the same problem. You owe Steve an apology for blaming him, without proof, of cutting and pasting the mathematical formulas into the wrong document, and for accusing him of not copying you on the patent correspondence, and for getting angry and using profanity at the meeting. No lawyer should have to put up with that kind of abuse from a client -- let alone a bright young associate like Steve. Fortunately for him, Foley & Lardner has enough work that he doesn't need to work for me on Iviewit patent applications for billable hours -- so he's not going to anymore.

I think you owe me an apology too, and I consider myself pretty thick-skinned when it comes to these kinds of things. I have spent numerous nights and weekends working on your agreements and patent applications in order to satisfy your unreasonably short deadlines. Then you accused me in front of everybody -- but behind my back -- of changing the math without your knowledge, altering numbers, missing a priority date, not filing the changes everybody agreed to, missing diagrams from final patent documents, changing filing strategies, and generally providing you with inferior work product. As you can see from my letter explaining the so-called errors, you blew everything out of proportion, and without even talking to Brian or me. You got everybody all excited, including your Father, and you're also talking about notifying the stockholders. Notifying them of what? Your unfounded accusations?

In order for me to continue working with you, you need to change. You need to promise me that you will act in a civil and professional manner from here on out. If you don't like the way I'm doing something, call me on it -- don't hold a meeting about it without me. If you don't understand a particular patent strategy, just ask me --instead of accusing me of changing the strategy. If a problem occurs on a team of which you're a member, try to resolve it as a team effort -- don't distance yourself and blame it on somebody else when you are partly at fault.

You first had problems with Ray Joao, so you came to Foley & Lardner. Now you have problems with us, and Steve bailed out. Are you still going to have problems with me and my work product? Well, you can either work with me to resolve your problems in a civil and professional manner, or you can find another patent law firm that will put up with your unreasonable manner and abuse.

Eliot, by spending time on holding meetings to blame your lawyers, you are missing the bigger issues with your technology. Corrections to the math of that last patent application are relatively meaningless. You've got much bigger things you should be worrying about. We have told you about them before, but I'm not sure you're listening.

First, you don't seem to have a good feel whether or not your technology is patentable. You don't personally have the background to tell whether your technology is new. You don't appreciate that this technology is in a very crowded and fast-paced field, and will be difficult to obtain broad patent coverage. You have not performed any technical searches to determine what the state of the art was at the time of your invention. You don't know how to help us describe your invention or distinguish it from the prior art that we do know about. You just seem to be assuming that everything you did is patentable or can be made so. And if not? Oh, that's easy. Then blame the lawyers.

Second, you essentially argued to Wachovia that it doesn't matter if your competitors are currently using the same or similar technology as

Iviewit, because you were the first one to do it. Don't you realize that this argument doesn't fly if you don't have granted patents? When our PCT applications publish within the next six months, most if not all of your trade secrets will be lost. So then you want to go license the technology and know-how? And Iviewit is a newcomer in the industry? This could be tough. Even if the patents do issue, but a competitor refuses to accept your technology license, do you have a spare million dollars or two to sue them for patent infringement? Have you thought about any of this?

Third, I doubt if you have ever checked to see if your competitors have patents covering your technology. You may find out, rather abruptly I'm afraid, that the people you're going to attempt to license may have a better patent portfolio than you do. All of a sudden you'll end up being the licensee. Or what's worse, you may have to shut down and re-engineer your business to avoid a multimillion dollar patent infringement lawsuit. This is a real risk -- much more of a risk than losing a priority date because a square root sign was missing from a math formula of an example in one of your patent applications. You should keep things in perspective.

During the Friday teleconference, you say that you don't know why we came up with a potential bar date of September 1, 2000, yet when Brian tried to explain it to you, you refused to listen. Now you independently decide that everything must be done by August 10th. That cannot realistically be accomplished. Furthermore, I don't think it is necessary. Based on our understanding when we were there in May, and based on Brian's comments on Friday, it does not appear that 8/10/99 started the one-year clock. According to both you and Brian, there was no public disclosure of the invention on that date, and there was no offer for sale of the invention. If you know of contrary facts, please provide them. But I refuse to jump through hoops that you arbitrarily set up just because you don't understand the law, or just because you get a kick out of seeing lawyers jump through hoops.

I realize that it is not commonplace for outside counsel to be so blunt and upset with a client, so I apologize for sending this e-mail. However, I felt that you needed to be told these things now, and in a straightforward manner, and in writing, in order to salvage our relationship. We cannot go on working like this. If you don't like the quality of our services or work product, then please fire us and go find yourself another group of lawyers who will put up with you. Otherwise, if you value our working relationship, you'll simply have to change the way you deal with people.

Please let me know what you decide.

Subject: PCT Patent Application for "Zoom and Pan" Imaging

Re: PCT Patent Application for System and Method for Providing an Enhanced Digital Image File
Inventor: Bernstein
Our Ref. No.: 57103/120

Brian:

During our brief telephone conversation today, you provided a few comments in response to my letter to you dated July 21, 2000. These comments were based on your review of the prior provisional applications, and are summarized below.

1. The step of "enlarging" is not essential for all embodiments of the invention.
2. The aspects of zooming and panning, and the function of the applet must be described in greater detail.
3. The disclosure relating to acquiring a photograph of a film video should be removed. However, the disclosure relating to processing one frame of a video according to the process steps of the invention should be retained.
4. In the provisional patent application having our reference number 57103/108, the flowchart in FIG. 2A does not match the corresponding description in the specification. Correction is needed.
5. Again, in the application for 57103/108, the claims in their current form may not be of the proper scope and should be revised.
6. You commented that the prior-filed PCT applications relating to enhanced video files did not specifically mention potential applications in radiographic images, X-rays, MRIs, etc. Regardless of whether these specific applications are supported, additional subject matter cannot be introduced to the prior-filed PCT applications unless additional patent applications are filed. Please advise if you would like us to file patent applications directed to these specific applications.

We discussed the possibility that the provisional applications currently on file may not provide sufficient disclosure to support all of the claims we may eventually want to file in the PCT patent application we are currently preparing, and, therefore, the sale of images using this process in September, 1999 may bar patentability in some foreign countries. You instructed us to proceed with the PCT filing to preserve whichever foreign filing rights are available.

Accordingly, comments 1-5 will be incorporated in the above-referenced PCT patent application. If you have any further questions or comments, please do not hesitate to contact me.

Re: Correspondence and Issues regarding
PCT International Patent Application entitled
"System and Method for Providing an Enhanced Digital Image File"
Filed: August 2, 2000
Inventors: Bernstein, et al.
Our Reference: 57103/120

Dear Eliot:

Pursuant to your e-mail instructions sent Friday, August 4, 2000, I forwarded a notebook to you containing a copy of all correspondence relating to the above-referenced patent filing. Furthermore, pursuant to your request during the telephone conference of Friday morning with Steve Becker, the following describes what occurred during the preparation of this application, any errors made in the application, how they were made, what risks are involved, and how the errors can be corrected.

Overview

Before discussing the details, I would like to put things into perspective and comment on the magnitude of the errors and the extent of their repercussions. I believe that the errors in the filed specification are of a very minor, technical nature, which can be readily corrected in the various patent offices in due course, and which will have no negative impact whatsoever. The errors in the math will not affect our priority claim back to the August 2, 1999, provisional application, because the math examples were not originally in there. As Steve explained during the Friday teleconference, the worst thing that could happen is that we could lose the benefit of priority for the mathematical examples for a short period of time, i.e., from the August 2nd filing date to the filing date of a continuation-in-part application which could be prepared and filed this month, if we decide to do so. In my opinion, the entire

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 2

situation surrounding these errors has been overstated, and your concerns expressed during the Friday teleconference are unwarranted.

Correspondence

In order to explain exactly what happened, the following paragraphs set forth a brief description of the enclosed correspondence surrounding the preparation and filing of the PCT application, and points out where and why the errors occurred. The numbers below correspond to the tabs in the correspondence notebook.

1. July 21, 2000, Letter from Steve Becker to Brian Utley

This letter encloses the "Zoom and Pan" invention materials on which the above-referenced PCT application is based.

2. July 24, 2000, 4:44 p.m., E-mail from Steve to You and Brian

This e-mail summarizes the recent conversation regarding the zoom and pan invention, and sets forth our strategy for preparing and filing the application.

3. July 24, 2000, 5:02 p.m., E-mail from Steve to You

This E-mail attached a copy of the previous letter Steve sent to Brian on July 21, and asked you for any additional comments you may have.

4. July 25, 2000, 7:35 p.m., E-mail from Steve to You and Me

This e-mail just confirms the time for the next teleconference for discussing the patent application.

5. July 26, 2000, 3:01 p.m. and 3:06 p.m., Letter from Steve to You and Brian

This letter encloses the first draft of the PCT patent application and the inventor information sheet. The letter says that Steve will call both you and Brian at 5:00 p.m. Eastern Time that day.

Note that this first draft includes several blank spaces, question marks, and comments indicating where Steve thought that additional support was needed.

6. July 27, 2000, 11:43 a.m., Fax from Brian to Steve

This fax, sent from Kinko's in Ogden, Utah, when Brian was on vacation, encloses the first examples of the mathematical formulas and a single Example that will be added to the first draft of the application. Note that Brian originally defined the source image aspect ratio (s_{iar}) as the height over the width.

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 3

7. July 27, 2000, 2:07-3:45 p.m., Fax from Steve to You and Brian

This fax includes only the nine pages of the application that were revised, including the background section and claims.

8. July 28, 2000, 4:56 p.m., Letter from Steve to You

This letter encloses the second draft of the patent application, which includes additional disclosure received from Brian. Since Brian was still on vacation, Steve asked you to make a copy of this letter and draft for Brian's review.

Note that in this second draft, that Steve's comment on page 13 points to an inconsistency between the math formulas and examples provided in this draft versus Brian's macro Excel spreadsheet output.

9. July 31, 2000, 8:43 a.m., 9:27 a.m., and 1:45 p.m., E-mails from Brian to Steve

Here, Brian sent Steve three different versions of the imaging math formulas and examples. Note that the aspect ratio is still being defined as height over width.

10. July 31, 2000, 3:58 p.m., E-mail from Steve to Brian and You

This e-mail acknowledges receipt of Brian's three versions of the imaging math formulas and asks whether the latest e-mail is inclusive of all prior changes. Steve states that he will now amend the specification of the PCT application based on this latest mathematical formulas and examples.

11. July 31, 2000, 7:09 p.m., Fax from Steve to You and Brian

Steve faxed you the third draft of the patent application. Steve asked for comments as soon as possible, but in no event later than 10:00 a.m., Wednesday, August 2, which is the day that the application had to be filed.

12. August 1, 2000, 7:38 a.m., E-mail from Brian to Steve

This e-mail confirms that the last e-mail included all the changes to the imaging mathematics.

13. August 1, 2000, 7:42 a.m., E-mail from Brian to Doug

In this e-mail, Brian forwarded the July 31 e-mail to me, including the latest imaging mathematics.

Foley & Lardner

Mr. Eliot I. Bernstein

August 9, 2000

Page 4

14. August 1, 2000, 8:30 a.m., Copy of Brian's Comments

This document shows Brian's comments on the second draft of the application. Brian gave this marked-up version to me when I was at your offices that morning.

15. August 2, 2000, 9:06 a.m., Fax from You to Steve and Me

This document sets forth the changes made to the third draft of the application by the Iviewit reviewing team, which now included Jim Armstrong. This document was the basis of our telephone conference from 10:00 a.m. to 3:30 p.m. that day. Note that this is the first time Jim provided his comments to us. Also note the extent of the comments, which, at this late stage in the process when the application had to be filed that same day, caused me some concern. During our teleconference, it became clear that we were revisiting old topics and decisions we previously made with you and Brian in the previous drafts of the application. Particularly note the extent of the mark-ups on the imaging mathematics beginning at page 11. A significant amount of time was spent discussing the particulars of the math formulas between Brian and Jim, and we all agreed that Brian would modify the math and examples and send them to me. Note that when the call ended, the source image aspect ratio was still being defined as height over width (see page 11).

16. August 2, 2000, 5:49 p.m., E-mail from Brian to Me

This e-mail attached the latest modifications to the mathematics and examples that Brian said he would send me. Note that this is the first time the aspect ratio is defined as width over height, since, in response to my pointing out the inconsistency between photography versus computer display aspect ratio conventions, Brian determined that it would be more consistent to express the math in the patent application in accordance with the computer display convention. This version of the imaging mathematics is what I used as the basis for the final draft of the patent application that was filed that night.

17. August 2, 2000, 9:39 p.m., E-mail from Me to Brian (at home) and You

This e-mail contained two versions of the same document, which represent where I was in the editing process at that time. The first document was in Word version 6.0/95 for Brian to be able to read at home. The second version was in Word 97 as usual. Note that my e-mail told you and Brian that you could send a copy to Jim if you want.

As you can see, I was fighting the clock since the application had to be on file before midnight that night, and I had to allow sufficient time to drive to the airport post office to obtain the filing date. Note that, beginning on page 13 (of the second version), and through to page 18, the imaging process mathematics and examples are set forth substantially in accordance with Brian's latest revisions. However, the digital example, beginning on page 22, had not yet been edited to pick up the change in aspect ratio convention. Also note in this

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 5

draft that independent claim 1 has not yet been changed to make the user interface element a dependent claim.

After additional discussions with both you and Brian that night, you both gave me the verbal "okay" to file the application. We obviously did not have time to let all three of you review it again before it was filed. At that time, it was all I could do to finish making the changes you requested throughout the day. I did that. I then briefly checked over the final documents, worked with my foreign filing coordinator to prepare the formal filing papers, and drove to the airport post office. The PCT and corresponding U.S. patent applications were properly filed that night.

18. August 3, 2000, 11:55 a.m., E-mail from Me to Brian, You, and Steve

This e-mail simply confirms that the applications were filed last night, and that copies would be forthcoming.

19. August 3, 2000, 1:35 p.m., E-mail from Brian to Me

This e-mail from Brian, thanking me for the "supreme effort to get the job done," was appreciated.

20. August 3, 2000, 2:47 p.m., E-mail from Me to You and Brian

After being informed that you wanted a copy of the application right away, I sent this e-mail attaching the Word document for the PCT application as filed. The e-mail clearly says that the drawings didn't change, which meant that you already had copies of the drawings from the previous drafts. I could not e-mail the drawings, and I thought since you already had a fax copy, this would suffice. I also said I would send full copies next week. This Word document does exactly represent what was filed in the PCT that night.

21. August 4, 2000, 11:34 a.m., Fax from Jim Armstrong to Me, copying You and Steve

This facsimile contains eight pages from the filed PCT application, which have been marked up to show what Jim believes are either typographical errors or improper formula expression. This fax was apparently the basis of the telephone call between you, Brian, Sy, Jim, and Steve on Friday. Each one of these purported "errors" will be discussed in detail below.

Friday Teleconference

In your extended teleconference with Steve Becker on Friday, of which I was not a participant, you made several inaccurate statements, accusations, and remarks regarding the errors in the application and, in general, the proficiency of Foley & Lardner's services.

Foley & Lardner

Mr. Eliot I. Bernstein

August 9, 2000

Page 6

Now that I have had the opportunity to review the tapes of the Friday teleconference, the patent application, and the application correspondence set forth above, I would like to explain exactly what errors were made, how they were made, why they were not caught, and what issues they raise. Although Steve did a masterful job of trying to educate you on the fundamentals of patent law in an attempt to put the errors in perspective, Steve was not involved in the preparation of the final draft of the application and so could not be expected to know how these errors arose.

Discussion of Changes

Please refer to the August 4, 2000, 11:34 a.m., facsimile from Jim Armstrong, which can be found at tab 21 of the correspondence notebook.

(1) Page 12, line 27

Although this is not an error, and Jim did not mark it as such, I want to point out that the formula " $tiw = \text{square root}(tia * sir)$ " uses the word "square root" instead of the square root symbol. Either way, this formula is correct, and provides sufficient basis, in my opinion, to correct subsequent errors in this formula, particularly where they don't make sense.

I do recall Brian mentioning, late Wednesday night, that a square root symbol was missing. I understood his comment to mean that I used the word "square root" instead of the square root symbol in this line of the application. I might have told Brian I would fix this in the final draft, but I probably ran out of time. Nevertheless, this is not an error. In fact, I am thankful that I did not remove the word "square root" intending to insert a square root symbol which may have been forgotten in the rush.

(2) Page 13, line 7

The minimum scan density (msd) is defined here as " $msd = tih/sih$ " (target image height over source image height). This is mathematically equivalent to " tiw/siw " (target image width over source image width), which is apparently what Jim and Brian want it to be for consistency with the last-minute change in aspect ratio convention. I agree. This formula can easily be changed to read " $msd = tiw/siw = tih/sih$," particularly because of the equivalency. It is my opinion that this is a very minor technical change, it should not be considered an error in any sense of the word, and I don't believe we will encounter any problems changing it in both the United States Patent and Trademark Office (USPTO) and the World Intellectual Property Office (WIPO) where the PCT (Patent Cooperation Treaty) International applications are filed, searched, and, optionally, examined. Recall that the same patent application was filed as both a PCT and US application Wednesday.

Note that this is the first time anybody pointed out a problem with this equation. The same equation appears in the previous drafts which you reviewed, and no reference to

Foley & Lardner

Mr. Eliot I. Bernstein

August 9, 2000

Page 7

correcting this equation appears in Brian's latest imaging process mathematical spreadsheet. Therefore, your accusation that Brian made this change with me, and it's still wrong in the patent, is, itself, wrong.

The best-case scenario, which I predict will occur, is that the USPTO and WIPO will permit me to make a preliminary amendment to the specification to make this change. In the worst-case scenario, the USPTO or WIPO will consider the change to be impermissible new matter, and the equation will have to remain as it was filed. In that case, there is an extremely remote chance that someone, someday, could argue that the inconsistency could cause the patent to be invalid for lack of enablement, i.e., that the specification does not "contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or which it is most nearly connected, to make and use the same, and shall set forth the best mode contemplated by the inventor of carrying out his invention." (35 U.S.C. § 112, ¶ 1.) However, I highly doubt that such a minor inconsistency could warrant such a drastic effect, especially since the mathematics itself isn't claimed.

(3) Page 13, line 19

For consistency's sake, " $viw = vwh * 1.25$ " should be changed to " $viw = vih * 1.25$ ", even though the previous line states that " vih " and " vwh " are equal to each other. Again, I would consider this a minor technical modification to a mathematical example that is not necessary for validity of the patent. Nevertheless, I think that we will be able to make this minor correction in both the USPTO and WIPO without any problem or repercussions. Not only is it simply a more preferred way of stating the same mathematical value, it is supported in the terminology of Examples 2 and 3. It is also an obvious inconsistency which would be known to those skilled in the art.

Note that this inconsistency appears in the latest version of Brian's mathematical formula spreadsheet under Example 1, which was essentially cut and pasted from his spreadsheet into the patent application shortly before it was filed. I did not have time that night to double-check all of the mathematical formulas.

(4) Page 13, line 23

The square root symbol is missing over the expression " $2,560,000/0.8$ ". This is an oversight on my part. The square root symbol does appear in Brian's Excel spreadsheet. I simply cut and pasted the text from Brian's Excel spreadsheet into a Microsoft Word document. Apparently, when this occurs, the square root symbol disappears. I simply did not have sufficient time to double-check all of the math.

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 8

As mentioned above, I do recall Brian mentioning, late Wednesday night, that a square root symbol was missing. However, I thought he was referring to the word "squareroot" on Page 12, line 27, and not here.

I now see that Jim also discovered this error on page 14 of his marked-up third draft. I did not see it at the time, because I did not go through, line-by-line, all of Jim's changes to the math since Brian was going to revise it anyway. Furthermore, I could not rely on all of Jim's mark-ups as the basis of the changes, since they appeared to me to essentially be the mathematical scratchpad he used in trying to understand the invention. It would have made no sense to follow all of his changes. Furthermore, Jim missed other changes that Brian and I caught later that night.

Once again, I do not believe that this "missing square root symbol" error is of a major concern. I believe that it would be considered a typographical error in the math, which can easily be corrected in the USPTO and WIPO by a preliminary amendment. Support for such a preliminary amendment is found at page 12, line 27, where the same formula appears correctly stated using the word "squareroot." Furthermore, any person skilled in the art would realize that 2,560,000 divided by 0.8 does not equal 1789 as set forth in the description, but that the square root of such a quantity would make the equation correct.

Again, let me discuss a worst-case scenario. If, on the remote chance that the USPTO or WIPO determines that the addition of a square root symbol is not a simple typographical error but instead constitutes new subject matter that cannot be added to the specification, we would have to determine at that time the proper course of action. First, such a determination can be appealed if we believe it is warranted. Second, the entire Example 1 can be stricken from the application if we feel that the remainder of the specification provides sufficient enablement for the claimed invention, and that leaving Example 1 in the specification without the square root symbol somehow takes away from enablement. Third, we can file another patent application in both the USPTO and WIPO, with the corrected formula. This would ensure that we would only lose priority from August 2 to the date of the filing of the corrected application. Since this mathematical example isn't in the original priority documents, it cannot be said that we would lose any benefit of priority from the original provisional applications.

I do not agree with Jim's argument that the missing square root symbol makes the entire patent application so difficult to understand that correction would be needed to apply the math to create the image. Steve's counter-argument is directly on point: if correct math was required to create the image, then the August 2, 1999, provisional filing would be essentially worthless for lack of enablement, because it has no math. I simply do not believe that perfectly correct math is required for enablement.

It is my opinion that there is no need to file a corrected application as a continuation-in-part to remedy the situation. I plan to file a preliminary amendment in the

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 9

USPTO and WIPO to correct the formula, which I believe will be accepted without an argument. I have successfully made changes of similar scope by preliminary amendment in both the USPTO and WIPO without encountering any problems. If I am proved wrong, and we decide not to appeal, I still think there is little downside risk in leaving the application as it is. In fact, I believe that there is more risk involved in filing a continuation-in-part application to correct such minor errors, since it could be argued that such a new filing constitutes an admission against us that the addition of the square root symbol is new subject matter.

(5) Page 13, lines 23-25

Since the aspect ratio convention was changed at the last minute, these three formulas should have been changed to precisely correspond to that convention. However, with the addition of the square root symbol in the formula in line 23, the three lines are actually correct as set forth in the patent application, but somewhat inconsistent with the new convention. Moreover, the final number result is identical to that which would be obtained by reversing the formulas as now requested. Once again, I believe that both the USPTO and WIPO will permit us to change these formulas to make them consistent and easier to read.

Note that, with the exception of the square root symbol disappearing as discussed above, these formulas were cut and pasted from Brian's latest Excel spreadsheet, and appeared as set forth here in the 9:39 p.m. application draft sent to you and Brian.

(6) Page 13, line 29

The viewing window stated as "320 x 240 pixels" should read "480 x 320 pixels" as set forth on line 14 of the same page. This was simply an oversight by all of us. Neither you nor Brian caught the mistake in the second draft sent July 28th (at page 13) or the third draft sent July 31st (at page 14), and Jim also missed it in his August 2nd mark-up. I missed it also during my final edits.

Once again, I believe that this would be considered a minor typographical or technical error, which can readily be corrected in both patent offices with a preliminary amendment. It is clearly supported at lines 14 and 15 on the same page of the patent application. The reader would know that this is an obvious typographical error, and correcting it does not constitute new matter. On the other hand, if somehow it does not get corrected, I do not believe that this error would render the patent invalid for lack of enablement.

(7) Page 14, line 6

I agree with Jim's suggestion that the width and height be stated here, as was done in Examples 1 and 3. Again, I do not believe this is a major concern, and I think we will be able to add the width and height labels with a preliminary amendment. It is clearly supported elsewhere in the specification. Note that this oversight could have been caught by

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 10

you or Brian before filing, since it appears the same way on page 16 of the 9:39 p.m. draft. Nevertheless, this is a very minor point, which will have no affect whatsoever.

(8) Page 14, line 17

Again, the square root symbol is missing, but this time the formula itself does not need to be changed other than adding the square root symbol. See my previous comments regarding addition of the square root symbol.

(9) Page 14, line 27

Here, "400w by 360w" should read "400w by 360h". This is an extremely minor typographical error, which can readily be corrected by preliminary amendment. This particular error should have been caught by all of us a long time before the filing date, since it also appears in the third draft.

(10) Page 15, line 6

Once again, the square root symbol is missing, but the underlying equation is otherwise correct. Refer to my previous comments regarding addition of the square root symbol.

(11) Page 18, line 28

Again, the square root symbol is missing. This example provides even a stronger argument that omission of the square root symbol is a typographical error, since the exact same formula is stated correctly on page 12 at line 27 using the word "squareroot". Again, refer to my previous comments regarding the omission of the square root symbol.

(12) Page 19, lines 2, 3, and 23

According to the Friday discussion between Jim and Brian, the question arose whether the minimum scan density should be stricken from these lines (since it doesn't add anything and could possibly confuse the reader), or whether it should be left in there, but with the addition of a new sentence that states that minimum scan density is not required since we are dealing with a digital image. Brian and Jim agreed on the latter.

This time, however, I don't agree and I recommend that we do not make such a change by adding a sentence. There is much higher likelihood that the addition of such a sentence would trigger a new matter rejection. Furthermore, it may contravene any argument we have that all of the changes to the specification are simply typographical errors in very technical formulas and do not constitute new matter. The addition of such a sentence in this example could be a red flag. The only way I would recommend adding such a statement would be if you could show me that it was clearly supported elsewhere in the specification.

Foley & Lardner

Mr. Eliot I. Bernstein

August 9, 2000

Page 11

Otherwise, I think that the statement "minimum scan density equals N/A" on line 23 says the same thing, and is actually an important part of the teaching of this example to instruct the reader that scan density is not a concern with a digital image.

If you don't agree that leaving the language in is the appropriate thing to do, then I would be willing to try to amend the specification by striking the minimum scan density language in this example. At least there is a harder argument that the patent offices would have to make if they were to hold that removal of this text represents new matter or renders the specification non-enabling.

No matter what we decide to do on this point, it is also a minor concern.

(13) Page 19, line 10

Changing " $0.75=0.75$ " to " $1.33=1.33$ " should not be a problem, since it is fully supported in the previous lines of that example. The mistake is obvious, and we would not be adding new matter to make the change. I believe that this can also be done by a preliminary amendment in the USPTO and WIPO.

(14) Page 19, line 15

Again, the square root symbol is missing, but the equation is otherwise correct. Refer to my previous comments regarding the square root symbol.

Summary

As you can now appreciate, the application as filed was not "completely wrong" as you first thought. True, Brian and I changed the math at the last moment to improve the readability, which I believe was successfully accomplished. Even if I had time, I could not have entered all of Jim's last-minute comments and corrections myself, because they were also wrong. We mutually agreed to let Brian take another pass and correct the math. He did. I took his work and pasted it into the specification. Unfortunately, the computer "ate" the square root symbol, and I didn't catch it. You had an opportunity to review it, and you didn't catch it. Brian had an opportunity to review it, and, if he did catch it and mention it to me, then I must have misunderstood him. Both you and Brian gave me the verbal OK to file it. Looking back, I think Brian did an outstanding job of changing the aspect ratio conventions at the last minute. I think we ended up with a much-improved patent application than we had with the third draft.

No matter how these "errors" arose, I believe that they are all of a minor technical and typographical nature, and that corrections can readily be made by preliminary amendment in both the USPTO and WIPO. Regarding the timing for making the preliminary amendments, I do not believe there is any rush. Even if there was, we would have a problem

Foley & Lardner

Mr. Eliot I. Bernstein
August 9, 2000
Page 12

in making such amendments now without filing an entirely new patent application in both the USPTO and WIPO.

In the USPTO, for example, it is not standard practice to file any amendments before we have received the filing receipt and application number. Otherwise, there is a very good chance the amendment will be lost in the Patent Office. Furthermore, there is essentially no rush to file the amendment, so long as it does not include new matter. We can also wait until after the first office action. Furthermore, we will not know whether our preliminary amendment will be accepted until the Examiner reviews the amendment during examination, which may not occur until a year from now.

Similarly, in WIPO, the PCT rules do not even allow us to file a preliminary amendment to amend the specification until the PCT Chapter 2 demand is filed at the 19-month point (seven months from now). Again, even then, we won't know whether the PCT Examiner accepts the amendment until months after that.

Conclusion

As I stated above, I believe that the "errors" are of a very minor, technical nature, that they can be readily corrected in the various patent offices in due course, and that they will have no negative repercussions whatsoever. I think there is very little risk in waiting a few weeks to file a preliminary amendment, and very little advantage in filing all new applications to make these corrections. Since the math was not in the original provisional patent applications filed by Ray Joao, there can be no loss of priority claim for that subject matter.

I hope you can now appreciate why I think that your fears about these "errors" are exaggerated, your accusations that we didn't follow your directions are unfounded, and your criticism of Foley & Lardner work product is unwarranted.

Of course, if you have any questions or comments on any of the above, please do not hesitate to contact me.

Very truly yours,

Douglas A. Boehm

Subject: iviewit.com Welcomes Brian Utley.

Dear Shareholders,

As of August 3rd, 1999 the Board of Directors of iviewit.com has approved and confirmed Brian Utley as President and COO. Mr. Utley will assume leadership of the company and the responsibility for organizing our strategic initiatives and licensing opportunities. Brian brings over thirty years of management experience from IBM and is highly respected within the computer industry. We are fortunate to bring Brian to iviewit.com and look forward to his valuable contribution to the success of the company.

Brian can be reached at utley_b@bellsouth.net
mailto:utley_b@bellsouth.net or soon at utley@iviewit.com
<<mailto:utley@iviewit.com>>.

By phone at work through Goldstein & Lewin at 561-994-5050 or cell at 561-289-8145.

Brian's Personal Resume

Professional History:

President, Diamond Turf Equipment, Inc. July, 1995 to July 1999.

In 1995 the company was engaged in refurbishing obsolete and run-out golf course maintenance equipment and had annual sales of \$250,000. Since that time the company has been transformed into a manufacturer of new machines that compete favorably with the best of the market leaders and expected revenue for 1999 of \$6M. The design of the machines was by Brian and was accomplished while putting together a manufacturing and marketing team capable of supporting the rapid growth of the company.

President, Premier Connections Inc., November, 1991 to Present.
Premier Connections provides consultation and support services in computer and related business management. Customers have included IBM and other small businesses.

IBM, 1955 to 1991.

Brian retired from IBM as Vice-President and General Manager, IBM Boca Raton.

Prior to his assignment in Boca Raton Brian spent 5 years in Europe as Group Director for PC's and small Systems. This responsibility covered all aspects of product management for all European, Middle East and African countries.

In 1983 Brian was appointed General Manager, IBM Biomedical Systems and asked by the IBM President, John Opel, to evaluate develop the long range strategy for this business unit. Brian subsequently reported to the President that the Business Unit, while quite viable, should be sold to a related business in the medical community. Having received approval to do so, he negotiated a profitable sale for IBM.

Between 1965 and 1983 Brian was the project and Systems manager for many major IBM computer Systems that earned IBM billions of dollars in revenue. The most notable of these was the 5E3E and AS400, one of IBM's most technology aggressive development programs ever and still one off IBM's most popular systems.

Brian entered the IBM laboratories in 1959 and immediately became the most prominent engineer on his first project with many innovative designs. Because of this, he was assigned to the German IBM laboratories to train German engineers in computer technology. He has been awarded a number of patents the most recent of which was granted in 1998.

From his start in October 1955 to the time he entered the laboratories Brian was a customer engineer responsible for maintaining IBM equipment on customer premises. During this time he self-taught computer technology and transistor theory and developed the first IBM field course in transistors. This is the accomplishment, which led to his assignment in the laboratories.

Hobbies:

Brian is a jogger and for 40 years has been an avid glider pilot with many competitive successes.

Other Activities:

Brian has been a director of the Florida Atlantic University Foundation Board of Trustees since

1992 and has served as Treasurer, head of the Investment Committee, and is currently Chairman of the Board.

In addition, he is a director of the Soaring Society of America and Chairman of the Soaring Society of America Foundation. In the past, he has served on the Boca Raton Chamber of Commerce Board, the Florida Philharmonic Board of Directors, and the Florida Governor's Council of One Hundred and is past president of the Soaring Society of America.

Family:

Brian is married to Sharon, is the father to 5 children and has lived in Boca Raton since 1988.

Sincerely,

Board of Directors

Brian retired from IBM as Vice President and General Manager, IBM Boca Raton. Prior to his assignment in Boca Raton Brian spent 3 years in Europe as Group Director for PC's and small systems. His responsibility covered all aspects of product management for all European, Middle East and African countries.

In 1983 Brian was appointed General Manager, IBM Biomedical Systems and asked by the IBM President, John Opel, to evaluate develop the long range strategy for this business unit. Brian subsequently reported back to the President that the Business Unit, while quite viable, should be sold to a related business in the medical community. Having received approval to do so, he negotiated a profitable sale for IBM.

Between 1965 and 1983 Brian was the project and systems manager for many major IBM computer systems which earned IBM billions of dollars in revenue. The most notable of these was the S/36 and AS400, one of IBM's most technology aggressive development programs ever and still one of IBM's most popular systems.

Brian entered the IBM engineer on his first job. The German IBM lab awarded a number of Fred. His start in Oct engineer responsible

eliot	3/10/2004 1:40:36 PM
Note	
Here Utley is not a graduate from college but in the Wachovia Private Placement he states he is, in deposition he states he is not.	

self-taught computer technology and transistor factory and developed the first IBM field course in transistors. This is the accomplishment which led to his assignment in the laboratories.

Education:

Having been born in England, he attended Beverley Grammar School and graduated in 1948 at 16. In 1949 he emigrated to the United States and completed his senior year at Ogden High School, Ogden, Utah.

He attended college at Weber College, Ogden, Utah and San Francisco City College completing two years of study.

Hobbies:

Brian is a jogger and for 45 years has been an avid glider pilot with many competitive successes.

Q. Okay. You just failed to mention

102

that in your previous --

A. I'm sorry, yes.

Q. Okay. And what did you do at

Diamond Turf Lawn Mower?

A. I was president.

Q. You were president. For the full

four years?

A. Yes.

Q. Okay.

A. My recollection is a little hazy.

It could have been 95, 96 when I started.

Q. Okay. So you were president of this

company for approximately three to four years?

A. Yes.

Q. And what was your role at Diamond

Turf Lawn Mower as president; what did you do?

A. I ran the company.

Q. Did you take on the position not

only of president but also as CFO or anything of

that nature, or you just did strictly like a

chief operating officer; what was your role

exactly?

A. I suppose you could consider it to

be a cross between a chief operating officer and

the chief engineer.

103

Q. And what did Diamond Turf Law Mower do; what sort of company is that?

A. It produced maintenance equipment for golf courses.

Q. Okay. And were you working also doing engineering for the company as well?

A. Yes.

Q. And that engineering capabilities that you have, was that something you garnered through your employment with IBM or is that something that you had specific knowledge of outside of your employment with IBM?

A. Both.

Q. This was not engineering of electrical components; this was engineering of mechanical systems; is that what this was?

A. Every, virtually every mechanical system has an electrical component.

Q. Okay.

A. And a hydraulic component in this particular case.

Q. And when did you -- when you ceased worked with Diamond Turf Lawn Mower, was that an amicable leaving or was there some problem or did

everything work out okay with that?

104

A. Well, there was a, there was a
dispute over intellectual property. There was no
intellectual property agreement in my employment
agreement and there were certain inventions that
I made that we were unable to resolve ownership
of.

Q. Okay. So these were inventions that
you developed while you were employed by Diamond
Turf Lawn Mower?

A. Yes.

Q. Okay. Can you describe those
inventions to me.

A. They related to hydro-mechanical
equipment.

Q. Okay. What exactly with hydraulic
mechanical equipment?

A. How much detail you want me to go in
to?

Q. Well, were they related somehow to
the operations of the hydraulics of the equipment
or were they strictly mechanical?

A. They related to a hydro-mechanical
system, which means that it involves the
integration of hydraulics into a mechanically

operating piece of equipment.

105

Q. Okay. And that's what all these patents, or were all these patents or were all these inventions, rather, the subject of?

A. Yes. Almost all the equipment that Diamond Turf produced or was involved with was hydro-mechanical.

Q. Are there any current patents or patents pending or applications for patents on these things that you hold?

A. No.

Q. Who holds the patent rights or if there are any patent rights, who has applied for those?

A. I'm not aware of any one.

Q. So you're not aware of any one making claim to these intellectual properties at this point?

A. No.

Q. When were you first introduced to Iviewit or its products by Mr. Wheeler? I'm assuming that Mr. Wheeler was the one who introduced you to the company.

A. Yes.

Q. And when was the first time that you

we're talking about them because you said billing statements, which could be something totally different, I don't know.

MR. SELZ: That's the attached exhibits to the Amended Complaint in this matter that we're referring to.

MR. PRUSASKI: Okay. Thanks.

By MR. SELZ:

Q. Now, you had referenced Mr. Dick doing some patent work for yourself; is that correct?

A. Yes.

Q. And was that any patents arising from your employment with Diamond Turf?

A. It was arising from the technology and engineering work that I did, yes.

Q. So the hydro-mechanical work that you had done at Diamond Turf?

A. Yes.

Q. And was there ever a dispute between yourself and the owner of Diamond Turf with regard to the patents involved for that hydro-mechanical work?

MR. PRUSASKI: Objection, relevance and to the form.

THE WITNESS: There was a

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of

Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

eliot Note

Monte Friedkin his last employer has stated that he did not tell him and that when he found out he fired him

president and COO of Iviewit to Wachovia?

243

A. We shared nondisclosure agreements and communicated as required in order to construct the business plan.

Q. And did they require or request that you provide them with a CV as part of the business plan to evidence your expertise.

A. I believe so.

MR. PRUSASKI: Objection to form.

MR. SELZ: I'll restate the question.

By MR. SELZ:

Q. Did Wachovia Bank request that you provide personal information to them as part of that business plan?

A. Yes.

Q. And did you provide that personal information in the form of a curriculum vitae or CV?

A. It was integrated in prior editions of the business plan and flowed into the one that was developed with Wachovia.

Q. Now, when Chris Wheeler first introduced you to Iviewit, was he aware of the situation at Diamond Turf and yourself and

Mr. Monte Freedkin or what was Mr. Wheeler's

244

knowledge of your position at Diamond Turf, to the best of your knowledge?

MR. PRUSASKI: Objection to form.

MR. SELZ: Okay. I'll restate the question. I'm sorry. Getting a little tired.

MR. PRUSASKI: I'm just objecting to the extent that you're asking him what Chris Wheeler's personal knowledge was.

MR. SELZ: Okay.

By MR. SELZ:

Q. To the extent that you know, what was Chris Wheeler's personal knowledge of that situation?

MR. PRUSASKI: Objection to form.

THE WITNESS: I believe Chris, Mr. Wheeler was fully cognizant of my relationship to Diamond Turf Equipment and to Mr. Freedkin.

By MR. SELZ:

Q. And he was aware about your departure from that company and that situation?

A. Yes.

Q. Involving your employed and your change of employment when you left Diamond Turf?

A. Yes.

Q. Other than your retirement at IBM, was there any other reason why you left IBM's employ?

A. No.

Q. Do you have any ongoing dispute with either IBM or Diamond Turf?

A. No.

Q. Going back to the employment of an attorney when you were at Diamond Turf, was there a retainer agreement that you recall signing on behalf of Diamond Turf to employ an attorney there? Or I'll take that back. I think you said that you never employed an attorney there; is that correct?

A. That is correct.

Q. When you hired an attorney personally, did you have a retainer agreement that you signed?

A. No.

Q. Do you have any letter or any other document evidencing the rates to be charged and the services to provided by that attorney?

A. I would have to research that question.

1 training that you've had or maybe you -- you did 113
2 indicate that you had any degree in mathematics.
3 Is that something that you have some experience
4 from from some other portion of your employment
5 or background?
6 A. I have training and experience in
7 mathematics.
8 Q. I'm sorry.
9 A. I say I have training and experience
10 in mathematics.
11 Q. How about in the scaling video
12 invention; is that part of what you've already
13 described?
14 A. That is readily derived from a
15 mathematical background.
16 Q. How about the remote control video
17 applications?
18 A. That's different.
19 Q. Okay. Now going back to --
20 A. What --
21 Q. -- the patent dealing specifically
22 with remote control applications.
23 A. What I did there was I established
24 the fact that the design point that Elicot had
25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Elliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

1 Q. Okay. And the correlation was for 115
2 development of future cameras or was that simply
3 an observation that was made?
4 A. It was an observation that current
5 camera technology incorporates zoom and pan
6 technology.
7 Q. Okay. How about any patent or
8 patent applications dealing with scales video or
9 zoom video imaging applications other than what
10 we've already discussed?
11 A. Without looking, and I apologize for
12 this, without looking at the specific patent
13 filings by name and number, I think, you know,
14 we're not really going to be able to get much
15 further on this discussion.
16 Q. Okay.
17 A. I don't want to put you off at all,
18 but I just want to say that to pursue a detailed
19 questioning in this specific area, I need to be
20 able to refresh my mind with what is in the
21 record.
22 Q. Okay. And are those documents that
23 you have in your possession someplace?
24 A. No.
25 Q. You don't have any of the paperwork

THE WITNESS: There was a

266

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

that what it is?

A. Yes.

Q. And Iviewit would be listed as a
primary patent holder; is that how it would be?

A. They were assigned to Iviewit.

Q. They were assigned to Iviewit. Are
you aware of any police report that was ever
filed involving Mr. Mike Real and yourself?

MR. PRUSASKI: Objection, relevance.

By MR. SELZ:

Q. Go ahead and answer the question, if
you can, sir.

A. There was a dispute over the nature
of the equipment that I bought from Iviewit as --

Q. Well, that really wasn't my
question. My question was are you aware of a
police report? And it's really a yes or no type
of answer.

MR. PRUSASKI: Objection, relevance.

THE WITNESS: I believe there was a
report.

By MR. SELZ:

Q. Okay. Do you know who filed that
report?

A. Iviewit filed that report as far as

FORMALITIES LETTER

OC000000005592300

Date Mailed: 12/04/2000

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

Filing Date Granted

MP
RESPONSE DUE 04 FEB 2001
DECL FEE

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 200.

A copy of this notice MUST be returned with the reply.

Date Mailed: 12/04/2000

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION
FILED UNDER 37 CFR 1.53(c)
Filing Date Granted

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- **The balance due by applicant is \$ 200.**

*A copy of this notice **MUST** be returned with the reply.*

FILING RECEIPT

OC00000005592299

Date Mailed: 12/04/2000

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).**

Foreign Applications

If Required, Foreign Filing License Granted 12/01/2000

Title

Zoom and pan imaging design tool

Preliminary Class

Data entry by : WASHINGTON, JAMES

Team : OIPE

Date: 12/04/2000

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Eliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

1 Q. Okay. And the correlation was for 115
2 development of future cameras or was that simply
3 an observation that was made?

4 A. It was an observation that current
5 camera technology incorporates zoom and pan
6 technology.

7 Q. Okay. How about any patent or
8 patent applications dealing with scales video or
9 zoom video imaging applications other than what
10 we've already discussed?

11 A. Without looking, and I apologize for
12 this, without looking at the specific patent
13 filings by name and number, I think, you know,
14 we're not really going to be able to get much
15 further on this discussion.

16 Q. Okay.

17 A. I don't want to put you off at all,
18 but I just want to say that to pursue a detailed
19 questioning in this specific area, I need to be
20 able to refresh my mind with what is in the
21 record.

22 Q. Okay. And are those documents that
23 you have in your possession someplace?

24 A. No.

25 Q. You don't have any of the paperwork

Management

Whereas the Company has retained Korn / Ferry to assist in the identification and recruitment of a high impact Chief Executive Officer (preferably from the media or entertainment industry) and Chief Technical Officer, iviewit has assembled a complementary and seasoned, management team with Fortune 100 and early-stage, entrepreneurial experience. This team consists of the following personnel:

Brian G. Utley, President (67) — For over 30 years, Mr. Utley was responsible for the development and world-wide management of many of IBM's most successful products such as the AS400 and the PC. His career with IBM culminated with his responsibility as Vice President and General Manager of IBM Boca Raton with a work force of over 6,000 professionals. He is a graduate of San Francisco City College.

Eliot I. Bernstein, Founder and Vice Chairman (37) — Prior to founding iviewit, Mr. Bernstein spent 15 years with SB Lexington where he was President of the West Coast Division creating and developing many innovative, computer-based multi-media marketing tools which remain in use supporting multi-billion dollar service industries. Mr. Bernstein is a graduate of the University of Wisconsin.

Michael A. Reale, Vice President of Operations (60) — Mr. Reale has over 20 years of operations experience, including P&L, quality, and delivery performance accountability. Most recently, Mr. Reale was the Chief Operating Officer for Boca Research (Nasdaq:BOCI), a manufacturer of personal computer enhancement and Internet thin client products. Mr. Reale received his BA and MBA from Pace University.

Raymond T. Hersh, Vice President of Finance (58) — Mr. Hersh has over 35 years of successful business and operating experience involving financial services, telecommunications, manufacturing, and corporate strategic planning. For over 20 years, Mr. Hersh has operated and grown companies in Florida, and most recently, he was co-founder and President/CEO of New Medical Concepts, Inc., a telecom company specializing in providing healthcare information. Earlier, he spent five years as an Enforcement Attorney with the U. S. Securities and Exchange Commission in New York City where he exited as a Branch Chief. He is a member of the New Jersey and New York Bars. Mr. Hersh received his BA from Lafayette College and his LLB/JD from the University of Pennsylvania.

Kevin J. Lockwood, Vice President of Sales and Business Development (40) — Mr. Lockwood joins iviewit from Cylex Systems where he held the position of Executive Vice President of Sales and assisted in securing three rounds of funding exceeding \$20 million. He also held the position of Head of Sales for Acer America, Inc. where he increased sales from a run rate of \$150 million annually to over \$1.5 billion annually in only a 17-month time. In addition, Mr. Lockwood successfully launched the Fujitsu P.C. into the U.S. and in the first year amassed revenues of over \$200 million. He is a graduate of the University of Maryland with a Bachelor of Science degree in Business Administration.

Guy Iantoni, Vice President of Sales (35) — Prior to joining iviewit in 1999, Mr. Iantoni was Senior Financial Representative with Fidelity Investments. From 1995 to 1997, he served as an Investment Management Consultant to the private client group of Morgan Stanley Dean Witter & Company, Inc. Mr. Iantoni has developed computer databases and systems to effectively market and target segments in both the financial markets and the healthcare industries. Mr. Iantoni is a graduate of the University of Wisconsin with an advanced degree in Pharmacy.

eliot Note
 Utley claims he is a graduate and contradicts in his deposition

Strategic Alliances

iviewit is creating a stable of strategic partners in the areas of technology, R&D, applications development, and video hosting and delivery. The Company has partnered with key industry leaders to develop precedence in the market. Partners include Greg Manning Auctions, Atlas Entertainment, Medical Online, Digital Island, Burst.com, and Versifi.

or where the site of that lawsuit was?

94

A. No.

Q. Was it in the federal court or state court?

A. I don't know.

Q. Was your deposition taken in the State of Florida --

A. No.

Q. -- or taken elsewhere?

A. It was taken in New York.

Q. In New York. Okay. Now, going back to something that Mr. Prusaski started but I don't think he completed with was some of your background information about your education. If you can just tell me from undergraduate onward what your educational background is, Sir, schools you attended, years of attendance and degree.

A. I don't have a degree.

Q. Okay.

A. I attended Weaver State University, which was then Weaver College, 1950.

Q. Okay.

A. San Fransisco City College, 1957, 1958.

Q. Okay. And you graduated from San

Francisco College or did not?

95

A. I don't have a degree.

Q. Okay. So you never completed your course at San Fransisco then?

A. Right.

Q. With regard to your employment experience, you had stated your employment with IBM. What years was that from, Sir?

A. 1955 through 1992.

Q. 92. And your first employment with IBM in 1955, what position was that in if you can recall?

A. I was employed as a customer engineer.

Q. All right. And after that, you were promoted to what position?

A. In 1960 I was promoted to development engineer, electrical engineer.

Q. At that point, were you supervising a staff or working with other engineers below you at that point?

A. I was involved in design of a computer.

Q. Were you the leader of any design team or were you just an individual engineer

EXHIBIT "B"

Patent Filing Process

- (i) a patent attorney's first contact with a *bona fide* inventor is where that attorney receives a "disclosure" from that inventor, or a series of disclosures, to begin the framework of a provisional²⁵ patent application or a non-provisional²⁶ patent application, and where said inventor certainly was not Utley, Utley was not there at the time of the inventions, as the first disclosures were made to Rubenstein and, upon information and belief, the patent evaluator of, among others, the multimedia patent pools commonly known as Motion Picture Experts Group ("MPEG") 2 and MPEG 4; and
- (ii) from the framework of the first disclosures, a patent counsel then forms "claims" to that invention where the claims are meant to precisely identify to which areas of protection an inventor gleans from the exact description of his or her invention according to the disclosures, and where the drafting of such claims are the exclusive affair of patent counsel subject to review by the inventor, and where said inventor certainly was not Utley; and
- (iii) once the framework of the invention and the claims are approved by an inventor, and in all cases herein, said inventor was not Utley, patent counsel then puts forth to a *bona fide* inventor what is known as the Declaration and Power of Attorney document that contains strict requirements according to the law for inventors and where said inventor was not Utley as he took no part in the formulation of the invention, took no part in the first disclosures of the inventions, took no part, or rather, should have taken only a limited role supporting the inventor in reviewing the claims, and, consequently, signing an Oath of the Applicant according to the evidence presented below, falls outside the requirements of the law in this disingenuous ploy by Respondent and Utley; and
- (iv) once patent counsel has completed all steps in (i) to (iii), and only then, patent counsel actually files a patent application with the United States Patent and Trademark Office ("USPTO"), and where the damage by Respondent had already occurred in (iii); and
- (v) once patent counsel has actually filed an application with the USPTO, from time to time, he or she may be called upon to respond to challenges to the inventions from the USPTO (commonly referred to as office actions) and where the damage by Respondent had already occurred in (iii); and

²⁵ Define provisional

²⁶ Define non-provisional

(vi) and once favorably responded to and having such responses accepted by USPTO to office actions, patent counsel will receive what is known as a Notice of Issuance of the patent for the inventions disclosed and where the damage by Respondent had already occurred in (iii); and

(vii) some three months or so after receiving a Notice of Issuance, the USPTO will afford the applicant (*bona fide* inventor or his assignee as the case may be) a granted patent, and where the damage by Respondent had already occurred in (iii).

JAN 28 2003

DOROTHY H. WILKEN
CLERK OF CIRCUIT COURT
CIRCUIT CIVIL DIVISION

**DEFENDANTS MOTION FOR LEAVE TO AMEND TO ASSERT
COUNTERCLAIM FOR DAMAGES**

Defendants, IVIEWIT.COM, INC., IVIEWIT HOLDINGS,
INC. and IVIEWIT TECHNOLOGIES, INC., by and through their undersigned
counsel, hereby move this Court for Leave to Amend their Answer so as to assert a
counterclaim in this matter pursuant to Rule 1.170(f) of the Florida Rules of Civil
Procedure and as grounds therefore would state as follows:

1. That the Defendants move to amend their answer in this matter so as to
include a counterclaim in this matter, which by its nature appears to be a compulsory
counterclaim to the extent that the issues arise out of the same nexus of events, as

justice requires that the counterclaim be tried at the same time as the complaint and answer so that all pending issues between the parties may be adjudicated in this action.

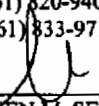

2. That as a result of fact that additional evidence in support of the Defendants' counterclaims is found in the Plaintiff's own files and records, the Plaintiff will not be prejudiced by the amendment of the Defendants' answer in this matter, nor will this matter be delayed as to the trial of same.

3. Defendants have attached hereto a copy of the proposed counterclaim.

WHEREFORE the Defendants, move this Honorable Court for the entry of an order permitting the Defendants to amend their answer in this matter.

I HEREBY CERTIFY that a true and correct copy of the foregoing has been provided by U.S. Mail and fax transmission this 26th day of January, 2003 to: Christopher W. Prusaski, Esq., Proskauer Rose, LLP, 2255 Glades Road, Suite 340 W, Boca Raton, FL 33431.

IN THE CIRCUIT COURT OF THE
15th JUDICIAL CIRCUIT IN AND
FOR PALM BEACH COUNTY,
FLORIDA

PROSKAUER ROSE, LLP, a New York
limited partnership,

CASE NO.: CA 01-04671 AB

Plaintiff,

vs.

IVIEWIT.COM, INC., a Delaware
corporation, IVIEWIT HOLDINGS,
INC., a Delaware corporation and,
IVIEWIT TECHNOLOGIES, INC.,
a Delaware corporation,

Defendants,

COUNTERCLAIM FOR DAMAGES

COME NOW the Counter Plaintiffs, IVIEWIT.COM, INC., IVIEWIT
HOLDINGS, INC., IVIEWIT TECHNOLOGIES, INC. and IVIEWIT LLC,
hereinafter collectively referred to as "IVIEWIT" or Counter Plaintiffs, and hereby
sues Counter Defendant, PROSKAUER ROSE, LLP, hereinafter "PROSKAUER",
a New York limited partnership, and alleges as follows:

GENERAL ALLEGATIONS COMMON TO ALL COUNTS

1. This is an action for damages in a sum greater than \$15,000.00, exclusive

of interest, taxable costs and attorneys fees.

2. Counter Plaintiff, IVIEWIT.COM, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and the State of California.

3. Counter Plaintiff, IVIEWIT HOLDINGS, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and California.

4. Counter Plaintiff, IVIEWIT TECHNOLOGIES, INC., is a Delaware corporation, formed by PROSKAUER, which at all times relevant hereto was authorized to conduct and conducted business in Palm Beach County Florida and the State of California.

5. IVIEWIT LLC, is a Florida limited liability company, formed by PROSKAUER, which, at all times relevant hereto, was authorized to conduct and conducted business in the Palm Beach County Florida and the State of California.

6. Counter Defendant PROSKAUER ROSE, LLP, (hereinafter "PROSKAUER") is a New York limited partnership, operating a law office in Boca Raton, Palm Beach County, Florida.

Boca Raton, Palm Beach County, Florida.

7. BRIAN G. UTLEY, (hereinafter "UTLEY") was at all times relevant hereto a sui juris resident of the State of Florida and who on or about September of 1999 was the president of Counter Plaintiff, IVIEWIT LLC.

8. CHRISTOPHER WHEELER, (hereinafter "WHEELER") is a sui juris individual and resident of Palm Beach County, Florida, who at all times relevant hereto was a partner of PROSKAUER and who provided legal services to the Counter Plaintiffs.

9. KENNETH RUBENSTEIN, (hereinafter "RUBENSTEIN") is a sui juris individual believed to be a resident of the State of New York and who various times relevant hereto was initially misrepresented by WHEELER as a partner of PROSKAUER and later became a partner of PROSKAUER, and who provided legal services to the Counter Plaintiffs both while at Meltzer, Lippie, et al., and PROSKAUER.

10. RAYMOND JOAO, (hereinafter "JOAO") is a sui juris individual believed to be a resident of the State of New York and who at all times relevant hereto was represented to be RUBENSTEIN's associate at PROSKAUER, when in fact JOAO has never been an employee of PROSKAUER but in fact was an employee of Meltzer, Lippie, et al.

11. That beginning on or about November of 1998, the Counter Plaintiff, IVIEWIT, through its agent and principal, Eliot I. Bernstein ("Bernstein"), held discussions with WHEELER with regard to PROSKAUER providing legal services to the company involving specific technologies developed by Bernstein and two others, which technologies allowed for:

i) Zooming of digital images and video without degradation to the quality of the digital image due to what is commonly referred to as "pixilation";

and,

ii) The delivery of digital video using proprietary scaling techniques;

and,

iii) A combination of the image zoom techniques and video scaling techniques described above; and,

iv) The remote control of video cameras through communications networks.

12. That Bernstein engaged the services of PROSKAUER to provide legal services to the company to be formed, including corporate formation and governance for a single entity and to obtain multiple patents and oversee US and foreign filings for such technologies including the provisional filings for the technologies as described in Paragraph 11 above, the "Technology", and such

other activities as were necessary to protect the intellectual property represented by the Technology.

13. That at the time of the engagement of PROSKAUER, Bernstein was advised and otherwise led to believe that WHEELER was the PROSKAUER partner in charge of the account.

14. Upon information and belief, WHEELER, RUBENSTEIN and JOAO upon viewing the technologies developed by Bernstein, and held by IVIEWIT, realized the significance of the technologies, its various applications to communication networks for distributing video data and images and for existing digital processes, including, but not limited to digital cameras, digital video disks (DVD), digital imaging technologies for medical purposes and digital video, and that WHEELER, RUBENSTEIN and JOAO conspired to undertake and in fact undertook a deliberate course of conduct to deprive Bernstein and IVIEWIT of the beneficial use of such technologies for either the use of third parties, who were other clients of PROSKAUER and WHEELER, or for WHEELER, RUBENSTEIN and JOAO's own financial gain, to the detriment and damage of the Counter Plaintiffs.

15. That WHEELER, who was a close personal friend of UTLEY, recommended to Bernstein and other members of the board of directors of

IVIEWIT that the IVIEWIT engage the services of UTLEY to act as President of the Iviewit.com, LLC based on his knowledge and ability as to technology issues.

16. That at the time that WHEELER made the recommendation of UTLEY to the board of directors, that WHEELER knew that UTLEY was in a dispute with his former employer, Diamond Turf Products and the fact that UTLEY had misappropriated certain patents on hydro-mechanical systems to the detriment of Diamond Turf Products.

17. Additionally, WHEELER was fully aware of the fact that UTLEY was not the highly qualified "engineer" that UTLEY represented himself to be, and that in fact UTLEY lacked real engineering expertise or even an engineering degree and that UTLEY had been fired from Diamond Turf Products due to his misappropriation of patents.

18. That despite such knowledge, WHEELER never mentioned such facts concerning UTLEY to any representative of IVIEWIT and in fact undertook to "sell" UTLEY as a highly qualified candidate who would be the ideal person to undertake day to day operations of IVIEWIT and work on the patents, acting as a qualified engineer.

19. Additionally, WHEELER continued to assist UTLEY in perpetrating such fraud on both the Board of Directors of IVIEWIT and to third parties,

including Wachovia Bank, by approving a false resume for UTLEY to be included in seeking approval of a private placement for IVIEWIT.

20. That based on the recommendations of WHEELER, as partner of PROSKAUER, the board of directors agreed to engage the services of UTLEY as president.

21. That almost immediately after UTLEY's employment and almost one year after initially providing of services, WHEELER provided a retainer agreement for the providing of services by PROSKAUER to IVIEWIT LLC, addressed to UTLEY, a true and correct copy of such retainer agreement (the "Retainer") being attached hereto and made a part hereof as Exhibit "A". That the services provided were in fact to be paid out of the royalties recovered from the use of the Technology, which was to be included in patent pools overseen by RUBENSTEIN.

22. That the Retainer by its terms contemplated the providing of corporate and general legal services to IVIEWIT LLC by PROSKAUER and was endorsed by UTLEY on behalf of IVIEWIT LLC, the Board of Directors of IVIEWIT LLC would not have UTLEY authorized to endorse same as it did not include the intellectual property work which PROSKAUER had already undertaken.

23. That prior to the Retainer, PROSKAUER and WHEELER had provided

legal services to IVIEWIT, including services regarding patent procurement and acted to coordinate such services both internally and with outside counsel, including RUBENSTEIN and JOAO, including times when they were misrepresented as PROSKAUER attorneys.

24. That PROSKAUER billed IVIEWIT for legal services related to corporate, patent, trademark and other work in a sum of approximately \$800,000.00.

25. That PROSKAUER billed IVIEWIT for legal service never performed, double-billed by the use of multiple counsel on the same issue, and systematically overcharged for services provided.

26. That summaries of the billing statements provided by PROSKAUER to IVIEWIT are attached hereto and made a part hereof as Exhibit "B".

27. That based on the over-billing by PROSKAUER, IVIEWIT paid a sum in of approximately \$500,000.00 plus together with a 2.5% interest in IVIEWIT, which sums and interest in IVIEWIT was received and accepted by PROSKAUER.

28. That WHEELER, UTLEY, RUBENSTEIN, JOAO and PROSKAUER, conspired to deprive IVIEWIT of its rights to the technologies developed by Bernstein by:

a) Transferring patents using Foley & Lardner so as to name UTLEY as the sole holder of multiple patents in his individual name and capacity when in fact they were and arose from the technologies developed by Bernstein and others and held by IVIEWIT prior to UTLEY's employment with IVIEWIT, and;

b) Upon discovery of the "lapses" by JOAO, that WHEELER and PROSKAUER referred the patent matters to WILLIAM DICK, of Foley & Lardner, who was also a close personal friend of UTLEY and who had been involved in the diversion of patents to UTLEY at Diamond Turf Products; and,

c) Failing to list proper inventors of the technologies based on improper legal advice that foreign inventors could not be listed until their immigration status was adjusted, resulting in the failure of the patents to include their rightful and lawful inventors and the payment by IVIEWIT for unnecessary immigration work; and,

d) Failing to ensure that the patent applications for the technologies, contained all necessary and pertinent information relevant to the technologies and as required by law; and,

e) Failing to secure trademarks and copyrights and failing to complete trademark and copyright work for the use of proprietary names of IVIEWIT and source code for the Technologies of IVIEWIT as intellectual property, and;

f) Allowing the infringement of patent rights of IVEIWIT and the intellectual property of IVIEWIT by other clients of PROSKAUER and WHEELER, and;

g) Aiding JOAO in filing patents for IVIEWIT intellectual property by intentionally withholding pertinent information from such patents and not filing same timely, so as to allow JOAO to apply for similar patents in his own name, both while acting as counsel for IVIEWIT and subsequently.

29. As a direct and proximate result of the actions of the Counter Defendant, Counter Plaintiffs have been damaged in a sum estimated to be greater than \$10,000,000,000.00, based on projections by Gerald Stanley, CEO of Real 3-D (a consortium of Lockheed, Silicone Graphics and Intel) as to the value of the technologies and their applications to current and future uses together with the loss of funding from Crossbow Ventures as a result of such conduct.

30. All conditions precedent to the bringing of this action have occurred or have been waived or excused.

COUNT I-LEGAL MALPRACTICE

31. This is an action for legal malpractice within the jurisdiction of this court.

32. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

33. PROSKAUER employed by IVIEWIT for purposes of representing IVIEWIT to obtain multiple patents and oversee foreign filings for such technologies including the provisional filings for the technologies as described in Paragraph 11 above.

34. That pursuant to such employment, PROSKAUER owed a duty to ensure that the rights and interests of IVIEWIT were protected.

35. WHEELER, RUBENSTEIN, JOAO and PROSKAUER neglected that reasonable duty of care in the performance of legal services in that they:

a) Failed to take reasonable steps to ensure that the intellectual property of IVIEWIT was protected; and,

b) Failed to complete work regarding copyrights and trademarks; and,

c) Engaged in unnecessary and duplicate corporate and other work resulting in billing for unnecessary legal services believed to be in excess of \$400,000.00; and,

d) By redacting information from the billing statements regarding services provided so to as to give the appearance that the services provided by PROSKAUER were limited in nature, when in fact they involved various aspects of intellectual property protection; and,

e) By knowingly representing and agreeing to accept representation of

clients in conflict with the interests of IVIEWIT, without either consent or waiver by IVIEWIT.

36. That the negligent actions of PROSKAUER and its partners, WHEELER and RUBENSTEIN, resulted in and was the proximate cause of loss to IVIEWIT.

WHEREFORE, Counter Plaintiff demands judgement for damages against Defendant together with reasonable attorneys fees, court costs, interest and such other and further relief as this Court deems just and equitable.

COUNT II- CIVIL CONSPIRACY

37. This is an action for civil conspiracy within the jurisdiction of this court.

38. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

39. Defendant, PROSKAUER and UTLEY, WHEELER, RUBENSTEIN and JOAO, jointly conspired to deprive the Counter Plaintiffs of their rights and interest in the Technology.

40. That UTLEY, WHEELER, RUBENSTEIN, JOAO and PROSKAUER with such intent, directed that certain patent rights be put in the name of UTLEY and/or that such patent rights were modified or negligently pursued so as to fail to provide protection of the intellectual property, resulting in the ability of other clients of WHEELER, RUBENSTEIN, JOAO and PROSKAUER to make use of such

technologies without being liable to IVIEWIT for royalties normally arising from such use.

41. That PROSKAUER, without either consent of the Board of Directors or proper documentation, transferred securities to Tiedemann/Prolow Investment Group, which entity was also referred by WHEELER, who acted as counsel for such unauthorized transaction.

42. That upon the discovery of the above-described events and conspiracy, IVIEWIT's lead investor, Crossbow Ventures, ceased its funding of IVIEWIT.

43. That Crossbow Ventures, which was a referral of WHEELER, took a security interest in the Technology under the guise of protecting IVIEWIT and its shareholders from the actions of UTLEY, based on the filing of an involuntary bankruptcy (which was later withdrawn), and as to WHEELER and PROSKAUER based on the instant law suit, when in fact such conduct was motivated by Crossbow's attempts to wrongfully detain the interests of IVIEWIT in the Technology. Such conduct, upon information and belief, was undertaken with the knowledge and assistance of WHEELER and PROSKAUER.

44. As a direct and proximate result of the conspiracy and acts of PROSKAUER, UTLEY, WHEELER, JOAO and RUBENSTEIN, the Counter Plaintiffs have been damaged.

WHEREFORE, Counter Plaintiffs demand judgement for damages against Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

COUNT III- BREACH OF CONTRACT

45. This is an action for breach of contract within the jurisdiction of this Court.

46. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

47. Defendant, PROSKAUER, breached the contract with Counter Plaintiff, IVIEWIT LLC by failing to provide services billed for pursuant to the billing statements presented to the Counter Plaintiffs and over-billing for services provided.

48. That such actions on the part of PROSKAUER constitute beaches of the contract by and between IVIEWIT LLC and PROSKAUER.

49. That as a direct and proximate result of such conduct on the part of PROSKAUER, IVIEWIT LLC has been damaged by overpayment to PROSKAUER and the failure of PROSKAUER to perform the contracted for legal services.

WHEREFORE, IVIEWIT demands judgement for damages against Counter Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

**COUNT IV- TORTIOUS INTERFERENCE WITH AN ADVANTAGEOUS
BUSINESS RELATIONSHIP**

50. This is an action for tortious interference with an advantageous business relationship within the jurisdiction of this Court.

51. Counter Plaintiff re-alleges and hereby incorporates that allegations of Paragraphs 1 through 30 as if fully set forth herein.

52. Counter Plaintiff was engaged in negotiations of technology agreements with both Warner Bros. and AOL/Time Warner as to the possible use of the Technologies of the Counter Plaintiffs and investment in Counter Plaintiffs as a strategic partner.

53. That despite the prior representations of RUBENSTEIN, at a meeting held on or about November 1, 2000, by and between UTLEY, RUBENSTEIN and representatives of Warner Bros. as to the Technology of IVIEWIT and the efficacy, novelty and unique methodology of the Technology, RUBENSTEIN refused to subsequently make the same statements to representatives of AOL and Warner Bros., taking the position that since Warner Bros./AOL is "now a big client of Proskauer, I can't comment on the technologies of Iviewit." or words to that effect in response to inquiry from Warner Brother/AOL's counsel as to the status and condition of the pending patents on the intellectual property.

54. That RUBENSTEIN, having served as an advisor to the Board of Directors for IVIEWIT, was aware of the fact that at the time of the making of the statements set forth in Paragraph 50, above, IVIEWIT was in the midst of negotiations with AOL/Warner Bros. as to the possible funding of the operations of IVIEWIT in and sum of between \$10,000,000.00 and \$20,000,000.00.

55. Further, RUBENSTEIN as a partner of PROSKAUER, and despite his clear prior actions in representing the interests of IVIEWIT, refused to answer questions as to the enforcement of the Technology of IVIEWIT, with the intent and knowledge that such refusal would lead to the cessation of the business relationship by and between IVIEWIT and Warner Bros./AOL and other clients familiar with the Warner Bros./AOL technology group then in negotiations with IVIEWIT, including, but not limited to Sony Corporation, Paramount, MGM and Fox.

56. That the actions of RUBENSTEIN were and constituted an intentional and unjustified interference with the relationship by and between IVIEWIT and Warner Bros./AOL designed to harm such relationship and further motivated by the attempts to "cover-up" the conflict of interest in PROSKAUER's representation of both IVIEWIT and Warner Bros./AOL.

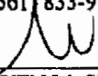

57. That indeed, as a direct and proximate result of the conduct of RUBENSTEIN, Warner Bros./AOL ceased business relations with IVIEWIT to the

damage and detriment of Counter Plaintiffs.

WHEREFORE, Counter Plaintiffs demand judgement for damages against Counter Defendant together with court costs, interest and such other and further relief as this Court deems just and equitable.

I HEREBY CERTIFY that a true and correct copy of the foregoing has been provided by U.S. Mail and fax transmission this 10th day of January, 2003 to: Christopher W. Prusaski, Esq., Proskauer Rose, LLP, 2255 Glades Road, Suite 340 W, Boca Raton, FL 33431.

Beverly Hills, CA 90210

Re: iviewit.com

Dear Gregg:

I very much enjoyed meeting you for lunch earlier this week. As promised, enclosed is a copy of the Business Plan for our client, iviewit.com.

Iviewit has developed two proprietary and complimentary technologies to enhance video and images delivered on the internet. The first is a state-of-the-art technology which enables full-screen, full-frame rate (i.e., 30 frames per second) streaming video to be viewed by any internet video player at bandwidths as low as 150 kbps, with increased quality and reduced file size. The second digital imaging technology creates an opportunity for full screen still images and 360° panoramic views that can be magnified with minimal image distortion.

Iviewit has protected its technologies by filing and securing eight patent pending applications, and is currently buffering and expanding those patents through a significant supplemental filing. Iviewit is represented by several of the most prominent patent law firms and attorneys in the world. Bill Dick, who is the head of the intellectual property department of Foley & Lardner in Milwaukee, Wisconsin, was formerly in charge of IBM's foreign patent division. Mr. Dick and his patent team of attorneys are preparing all of iviewit's supplemental patent filings and are drafting all of iviewit's license agreements. Iviewit's potential patent litigation (if any) will be handled by Ken Rubenstein, who is the head of intellectual property litigation group at the law firm of Proskauer Rose in New York City. Mr. Rubenstein is in charge of all patent litigation on behalf of the MPEG patent pool, in addition to a number of other high-profile technology litigation matters.

Mr. Gregg W. Ritchie

May 19, 2000

Page 2

Iviewit has licensed its technology and providing services to a number of substantial clients, such as hollywood.com, broadway.com, Hyatt Hotels and Resorts, and Great Expectations Dating Service. Iviewit also is in final negotiations to license its technology to playboy.com, medicalonline.com (x-rays, MRI's CT-scans, etc.) americanenterprise.com (multi-hour surgical and educational videos), gregmanningauctions.com (one of the largest auction houses) and many other clients in the entertainment, health care, automotive and other industries.

Iviewit initially raised \$500,000 of seed capital from Wayne Huizenga's venture group (at a \$10 million post-money value). Within the last few months, Iviewit raised \$1.5 million in a Series A round at a \$25 million post-money valuation from an investment group led by several individuals who previously ran Merrill Lynch's venture division. Iviewit is currently seeking an additional \$1-\$2 million in the Series A round, with a Series B round (\$10 million minimum) to follow later this year. The proceeds will be used to provide working capital (including the leasing/purchase of equipment and facilities) which will enable iviewit to fulfill its substantial backlog of orders and to expand its licensing operations. Iviewit is currently in discussions with several of the nation's leading investment banks to lead the Series B fundraising efforts.

The iviewit technology is most easily explained through a demonstration. If Pacific Capital or its Venture Group are interested in learning more about the company, please let me know and I will arrange to have the principals fly to Los Angeles for a meeting. Although you can see some of the company's technology and applications on the website (www.iviewit.com), the highest-quality work is not available for public viewing and is best seen through a private demonstration.

I look forward to hearing from you.

Best regards.

Very truly yours,

Alan J. Epstein

Re: iviewit

Dear Christopher:

I would very much appreciate your sending two Confidentiality Agreements to Mr. Gemal Seede, one addressed individually and one to Netcubator, the company which employs him at address below:

Mr. Gemal Seede
Netcubator
30 W. Green Street
Pasadena, California 91105
Facsimile: 626-449-4395

Please send the Confidentiality Agreements directly to Mr. Seede, with a copy to my attention. Also please include in your cover letter a statement, similar to the one set forth in the Confidentiality Agreement you sent to Richard Rossman on April 26th, regarding Proskauer's general views on the novel and protectible nature of the patents and technology.

Very truly yours,

Alan J. Epstein

Gentlemen:

At the request of Alan Epstein, I am forwarding the enclosed Confidentiality Agreements to you. I would appreciate your signing and returning your Agreement to me.

We have undertaken representation of iviewit, Inc. ("iviewit") and are helping them coordinate their corporate and intellectual property matters. In that regard, we have reviewed their technology and procured patent counsel for them. We believe the iviewit technology is far superior to anything presently available with which we are familiar. iviewit has filed a provisional patent application on a method for providing enhanced digital images on telecommunications networks. We are advised by patent counsel that the process appears novel and may be protected by the patent laws. While in all matters of this sort, it is far too early to make any final pronouncements. We do believe that there is an extremely good prospect that iviewit will protect their process which is novel and superior to any other format which we have seen.

Sincerely,

Christopher C. Wheeler

world. Founded in 1875 in New York City, the firm employs 475 attorneys and has wide experience in all areas of practice important to businesses, including corporate finance, mergers and acquisitions, real estate transactions, bankruptcy and reorganizations, taxation, litigation and dispute resolution, intellectual property, and labor and employment law.

Armstrong Hirsch Jackoway Tyerman & Wertheimer, P.C.

One of the nation's leading entertainment law firms. Based in Los Angeles, California, it represents many of the most prominent actors, writers, directors and producers of feature films, television programming and other entertainment content. The firm also represents various content and technology companies in the Internet industry, including prominent web sites, entertainment-oriented portals, aggregated celebrity sites and various e-commerce companies. The firm is assisting in developing the business structure and strategic relationships for iviewit.

Foley & Lardner

One of the oldest and largest law firms in America. Founded in 1842, the firm now has more than 750 attorneys in 14 offices, following the February 1996 merger with Weissburg and Aronson, Inc. Foley & Lardner's over 100 highly skilled intellectual property attorneys constitute one of the largest and most sophisticated technology groups in a general-practice law firm in the United States. As one of the few large national law firms with a global intellectual property law group, it is uniquely positioned to help iviewit capitalize on its foreign filings. The firm's broad-based representations in litigation, regulatory affairs and general business counseling is complemented by one of the world's most highly trained staffs, which includes 65 engineering and advanced technical degrees, including 12 Ph.D.'s. The list of clients using Foley & Lardner to fill their intellectual property legal needs ranges from small entrepreneurial start-up companies to large international and multinational corporations. Foley & Lardner attorneys provide solutions and successfully serve the needs of clients around the world, including those situated in the United States, Canada, Latin America, the European Union, Eastern Europe, the Middle East, and the Pacific Rim.

-
- **William J. Dick** - Special Counsel to the West Palm Beach office of Foley & Lardner. A member of the firm's Intellectual Property Department (Electronics Practice Group), Mr. Dick currently focuses on mentoring other members of the Electronics and Consumer Products Practice Groups in various IP related matters. He also conducts weekly classes in patent related matters for new associates. Mr. Dick joined Foley & Lardner after 26 years with IBM. He began as a patent attorney, and has handled all phases of patent, trademark and copyright duties, including litigation. Mr. Dick's most recent position with IBM was as Assistant General Counsel to IBM Asia Pacific. Mr. Dick is a graduate of the University of Virginia (B.M.E., 1956; L.L.B., 1962 changed to J.D., 1970)
 - **Douglas Boehm** - a partner in the Milwaukee office of Foley & Lardner and a member of the firm's Intellectual Property Department (Consumer & Industrial Products Practice Group and Health Information Technology Practice Group), Mr. Boehm practices in the areas of patent, trademark, copyright, and trade secret counseling; U.S. and foreign patent prosecution; and computer software and intellectual property licensing and technology transfers. Mr. Boehm's technical focus encompasses electrical and electronic engineering, including analog/digital/RF circuitry, radio telecommunications, lasers and fiber optics, and computer hardware and software. He has extensive experience in private industry, having worked as a development engineer and patent agent for Motorola, and as patent counsel for a subsidiary of Amoco Technology Company.

reason that you can recall whatsoever why these
two computers were given the names Nitro and
Bomber?

155

A. Well, at their inception, they were
reasonably current in the state of the art.

Q. Okay. So they were basically quick
and they were high-capacity machines and they
were desirable; is that what they were?

A. Well, let me position that.

Q. Okay.

A. At the time of their inception, they
would be considered to be reasonably current in
the state of the art. But we all know at what
rate the technology moves.

Q. Okay. So about three months after
they were created, they were no longer state of
the art?

A. That's very often the case.

Q. Okay. With regard to William Dick
and Foley & Lardner, do you have any relationship
or continue a relationship with either Foley &
Lardner or Mr. Dick?

A. No.

Q. Have you known Mr. Dick in any other
setting other than related to Iviewit?

A. He worked for me at IBM as manager of the intellectual property department. 156

Q. And is that why -- or strike that. Did you recommend that Mr. Dick be retained for the intellectual property work for Iviewit?

A. Actually, I used Mr. Dick as a reference or a consultant to determine who Iviewit should consider retaining for its intellectual property work.

Q. And Mr. Dick was subsequently, Foley & Lardner and Mr. Dick was subsequently employed for that purpose?

A. Mr. Dick was never employed by Iviewit, but Mr. Dick was retained by Foley & Lardner as a senior staff member because of his broad experience both before the bench and worldwide in intellectual property matters and, and he endorsed Foley & Lardner as a competent intellectual property company that would handle our affairs. I trusted his judgment.

Q. Now, are you aware of any relationship between Iviewit and Real 3D?

A. Real 3D were brought into the picture by Mr. Wheeler. They were a resource by

CORRECTED VERSION - CORRECTED ON 5/14/2003
Transcription of Telephone Conference
Conducted July 31, 2000

Participants:

Simon Bernstein, Eliot Bernstein, Maurice Buchsbaum,
Brian Utley, Doug Boehm, Chris Wheeler

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified. Note also that this recording has numerous instances of participants speaking at once or carrying on simultaneous side conversations that make it difficult to follow and transcribe the entire line of discussion.

Utley: <begins midstream>...status of the original digital image filings, and basically the fact that the original filings do not cover the full subject matter of the imaging technology; and to wit, one of the omissions, in particular in reading the claims section of the provisional and the formal filing, relates to the zooming and panning capability that is inherent in the technology. This has become a topic due to the fact that we are currently in the second phase of filing imaging patent protection which is driven by the provisionals that were filed later last year, between August and December of last year. So the concern that were expressed by Eliot in reviewing this is that this omission of the zooming and panning capability was attributable to a failure, for whatever reason, on the part of Ray Joao, the patent attorney of record, in constructing and putting together the provisional and formal filing<tape cuts out here> did I say it is that right Eliot

E Bernstein I believe so

Utley Is that your understanding

E Bernstein Correct

Utley The purpose of this meeting is to review the facts and I think there are two particular points that are ...that are important to moving ahead. The first is: "Given that the filings are what they are, and given what we know about the filing which is scheduled to take place this week on Wednesday, what means do we have to correct the situation; and given whatever corrections we find, what then is the impact or exposure to iviewit based upon what actions we can take. Then, lastly, what, if any, recourse might iviewit have vi sa vi the omissions in the original filings Are there any other issues, Doug?

Bernstein: Yeah, just correcting back to Ray Joao's work of the formal filing that he filed. Do we have a copy of that?

Utley: I do have that.

Bernstein: I don't. I've got the provisional and I've got...

Boehm: Everything is on the table

Utley: you should have...the formal.

Bernstein: This one?

Utley: Yes, that's the formal.

Bernstein: Okay.

Simon Bernstein: I just have one question. Does anybody have, or are we allowed to get, the files of Ray Joao?

Boehm: I have them.

Wheeler: Do you have all of the work that he had?

Bernstein: No, not all of it.

Utley: What was purported to be in the files?

Bernstein: And he also claimed to us that he destroyed part of his files.

Boehm: And I have some of his files. I have what was purported to be all of the firms' files.

<Inaudible comment.>

Utley: Well, there's a whole history, then, because I tried to get complete copies of the files originally, and found out later that not only did he not send us all the files, he didn't even mention that there was an extra filing out there that we didn't even know about.

Bernstein: This one that's in question.

Boehm: Yep

Simon Bernstein: You have no notes, no data on...?

Boehm: No, I have the application. I have things that you could get from the US patent office—that I could get from the US patent office. I have very few notes. I do have some scribbled Ray Joao's notes, but I think you gave me those notes.

Utley: I did. I gave you Bill Dick after Bill yourself[] the notes that I had.

Bernstein: And Ray's made disclosures to us that he destroyed the documents to protect us, which I don't know what he was thinking.

Simon Bernstein: Destroyed what documents?

Bernstein: Whatever he had in his files. Other patent copies, copies of the drafts as they proceeded...all that he destroyed to protect us from something I asked him to explain, and his reasoning...because I said to him, you know, usually you destroy documents when you are protecting somebody from something illegal or something. Have I done something that would force you to hurt me possibly? He said it was typical, normal, that all lawyers destroy their records.

Simon Bernstein: If that, in fact, is the case—I've never heard of a lawyer you know other than Nixon destroying anything the work is ours. Am I right Chris when we pay for a lawyer and we pay for the work, the work is ours.

Wheeler: The work product is yours. He may maintain copies of his files and everything; or his confidential notes to himself are not necessarily yours. But the work "product" is...

Simon Bernstein: Would you say that anything germane to the issue belongs to him?

Wheeler: Well, I mean if he wrote notes...in sidebars...yeah.

Bernstein: How about revised patents[]. How about copies? Works in progress

Wheeler: But things which would reinforce your patent, obviously, that is germane to the strength of your patent yes, you would be entitled to copies I don't think we disagree.

Bernstein: He's claiming He destroyed all faxes.

Wheeler: Can I ask you a question?

Bernstein: Yes.

Wheeler: Just so both of us understand...was this patent done prior to his flying down here, or was this patent done as a result of his flying down here and having discussions with you? I was under the impression that when he flew down here—this was before Brian came—I was under the impression that followed our meeting with Reel 3-D. I was under the impression that he was coming down to discuss, at the very least, the video aspect so that you could complete that; but were you also completing the imaging patent?

Bernstein: Correct.

Wheeler: So he went to your [kitchen]?

Bernstein: Right. And we spent days there

Wheeler: And the two of you spent all the days...

Bernstein: Correct.

Wheeler: And did he, in front of you, write notes?

Bernstein: Tons. Hundreds

Wheeler: And did he then produce them on his computer and type out certain things?

Bernstein: Yes.

Wheeler: I was under the impression he was doing that with you.

Bernstein: He did.

Wheeler: And did you read those?

Bernstein: I did. I did - now going to that same nature, that's the provisional I think we're talking about...

Wheeler: Right.

Bernstein: But he flew out here again with me and Brian and went through this as he went to file this--this is a 3/23/2000 file--that also fails to make mention of.

Wheeler: So that's the formal file...the formal one?

Bernstein: The formal file. So both also missed the point.

Wheeler: I just wanted to know and to put things in proportion, when you read the provisionals, because Brian wasn't with the company right now and then, and when there were all those drafts, because obviously we didn't see them...

Bernstein: Well, you saw because we gave you all the documents. I'd get a document from Ray and bring it to you so you would have records of everything up to that point because I didn't want to keep them at my house.

Wheeler: The final...the final...but I'm not reviewing the patent. I was keep maintaining it as...

Bernstein: Okay, but you have every record...

Wheeler: Everything you gave me we maintain. We don't...

Simon Bernstein: Any notes should be produced...

Wheeler: We don't throw away anything.

Bernstein: Yeah, I know.

Simon Bernstein: I know you don't you're very thorough.

Wheeler: So, I'd file it away; so if you gave it to me, it's in our archives.

Bernstein: Right.

Wheeler: I wanted to know, when you read those drafts...

Bernstein: Oh, it was...it was clear

Wheeler: Answer my question...when you read the drafts, did you see the panning and scanning elements?

Bernstein: Yeah, and zooming, up to 1,000 times we thought it was. That was the big...you know, we had it in there...as a matter of fact, he just said it...somewhere it's in there up to 1,000 times, isn't it?

Utley: 1,700.

Bernstein: Right. That was our old mistaken a number of times. So, yeah, for him to miss that, Chris, would be the essence of stupidity.

Wheeler: So it was in there?

Bernstein: Absolutely.

Utley: The zooming, it was in the body, but not in the claim.

Boehm: But a provisional doesn't really...doesn't have to have claims.

Utley: It doesn't have claims.

Bernstein: But then in our claims of our patent, it's not there. This is what you're representing, correct?

Wheeler: So you're saying that it wasn't put in the file, but it was put in the provisional.

Boehm: No, I could see where he's going to argue that it's there.

Bernstein: Let's see. Let's take a look.

Wheeler: ...what the language of the patent claims are that he filed.

Bernstein: Okay, let's see what he...

Wheeler: And this isn't the final decision because I can go back right now and amend those claims.

Bernstein: Wow, yes, but we have elements of exposure that creep in correct?

Wheeler: I'm just telling you the whole thing, then we'll go back. So you did look it over, and there are no claims in the provisional?

Boehm: There are no claims in a provisional. You can file them, but they are never examined.

Wheeler: But the zooming and the panning and the scanning element was incorporated in that?

Boehm: Go ahead, Brian.

Utley: Let me make sure that we say that properly. The provisional filing had a claims section which migrated into the final filing, but Eliot is correct in saying that the provisional does not need a claims section.

Boehm: The provisional never gets examined, so it doesn't need the claims. It just holds your place in line for one year.

Bernstein: But then when I look through this...

Simon Bernstein: Hold on, Eliot, I need to understand this. What you're saying, then, is assuming any negligence on his part, to that point the negligence doesn't become realistically damaging to the company until since he actually made a claim...since he actually made a provisional filing. Which took our place in line.

Boehm: If the provisional filing covered the invention, your place in line is only as good as the subject matter described in accordance with the law.

Simon: Obviously, it should have had the panning and zooming in there.

Boehm: Well, the word "zoom" is in there.

Bernstein: But not really to describe what we're doing.

Boehm: But do you see what I'm saying? It's only to the amount of subject matter that and attested where the average person skilled in the art could make and use an invention as it's described in this document, and without "undue" experimentation, without inventing it himself.

Simon Bernstein: Right.

Boehm: Now, this provisional application, you throw it...different patent attorneys do different things with it. On one end of the spectrum, you do an invention disclosure. Most big corporations have invention disclosure forms which leads the inventor to write out good disclosures and figures and things, and I've seen people actually file that invention disclosure because if you're coming up on a bar date, you don't have time to write an application or think about what your invention is. All you've got to do is get something on file, and then hope that it will protect...that whatever you had on file covered your invention.

Simon Bernstein: Is that what we've done so far?

Bernstein: No.

Boehm: I don't want to answer that, but that's the line.

Boehm: It's a grey question, it's a grey area, I think.

Wheeler: That's what we're aiming to do, that's what we're hoping to do.

Boehm: But on one end of the spectrum, you file very minimal work, and that's what Ray did on some of the applications, like on the one...

Wheeler: He was trying to do it in a broad...

Wheeler: He did say conceptually that his method was to do a broad stroke of it.

Boehm: Right. Well, a broad stroke on drafting the claims.

Wheeler: Okay. Right.

Eliot Bernstein: He's got to put the invention in!

Boehm: That doesn't happen in a provisional at all, generally. If you want to, you can write the provisional claims just so you know what you're doing, and it's actually used as subject matter; but the claims are never examined. It doesn't matter if it's in proper format or anything, it just sits there. Now, if you pick up the provisional a year later—it has to be within that year—if it's a real well done application, you just file it. There's no money involved in turning the provisional into a regular filing. Oftentimes, with these one-page disclosures, there's a substantial amount of money involved in taking that from there to there. The problem is you cannot add subject matter to the patent application later on once it's filed.

Bernstein: Unless it's really the patent application, correct?

Boehm: No, the subject matter has to be supported—has to be described—

Simon Bernstein: In the provisional.

Boehm: Uhhuh To that text, or you lose your filing date.

Wheeler: But the zooming element, then, is not in addition.

Boehm: Is not in addition? You mean...

E. Bernstein: It's not even in there.

Wheeler: You can't add subject matter. So if he did describe zooming, then it's not in addition.

Bernstein: Did he, ?

Wheeler: I am asking you whether he did or not?

Boehm: I'm not clear on what you mean. You can't add additional subject matter after the filing date of an application or you'll lose the right to that filing date.

Wheeler: The provisional? You can't add subject matter to the provisional?

Boehm: To any application...any patent.

Wheeler: But if he did describe the zooming, then the zooming element is not an addition in the formal.

Boehm: Right. It's supported. If he described it in the original, you can base claims on it later.

Wheeler: And have we said that the zooming is in the provisional?

Bernstein: Nowhere that I can see.

Simon Bernstein: Wait. You're the lawyer reading another lawyer's work. Is it in there?

Boehm: Do you have a copy of it?

Bernstein: Yeah, right here. It isn't in there if it bites you.

E. Bernstein: It's not in the filing either.

Simon Bernstein: It's obviously not in the filing if it's not in the provisional.

Bernstein: No.

Simon Bernstein: Can you make reference to something...let's say he uses the word "zoom".

Boehm: Exactly. I'm pretty sure the word "zoom" is in there, isn't it Eliot?

Bernstein: But what Doug's saying is that had you written the patent, you would have described the invention as the ability to do this cool zoom that we all...and just said this is the cool part of what we're doing. What Ray's missing in the outline is the ability for you to put a picture on a Web page.

Wheeler: He did know that an important element was the fact that when we went in and made it bigger, we didn't pixelate.

Bernstein: It didn't pixelate. Not in here at all.

E. Bernstein: Not even mention to that concept.

Bernstein: Complete failure. It's not.

Wheeler: But if said it doesn't distort when we zoom...

Bernstein: Nope. Nothing like that.

Wheeler: That's the same thing, isn't it?

Bernstein: Yeah, but he hasn't said anything...he doesn't even tell you ...

Wheeler: What about the panning element, or is that element not patentable?

Bernstein: No, that's part of the whole process is to be able to zoom while panning.

Wheeler: Here it is. "The above process can be utilized in order to create higher zoom capabilities with each new depth layer of an image..."

Bernstein: No, but that's a new depth layer which is bringing in another hotspot image, so it's really a completely different subject.

Boehm: Oh. Okay.

Boehm: Okay. Where is that?

E. Bernstein: I read it to, he's very crafty you know.

Boehm: "Where the zoom capacity of up to 1700 times or greater may be easily obtained with the [present conventions.]" Are they talking about the hotspot now?

Bernstein: No.

Boehm: No, it's the general zooming capability.

Wheeler: So it's not in addition.

Bernstein: Well, explain to him where it's missing.

Wheeler: You guys didn't put it in the formal...I don't mean you...he didn't put it in the formal one in the depth in that what we want to do it but he could have without it being construed as an addition.

Boehm: Yes.

Boehm: Well play lawyer on you now<Laughs; cannot understand his comment.>

Wheeler: Right - sorry

Boehm: Whether or not it's supported is a question that's going to be determined either between you and the examiner...probably not, it's between you and another

lawyer someday when the case is litigated. The question is And again, the test is: Can the average person skilled in the art—the average designer of this type of software—can he read this document and make and use of your invention without inventing it? That's the test. Now, whether he uses the word "zoom" in here and "magnification" later, that doesn't mater as long as he would have gotten it. If it is so simple to build by reading this, you don't need any subject matter. If you're combining three elements A, B, and C, and A, B, and C are standard in the art, and you tell them these are standard in the art, go combine A, B, and C, that could be a one-page application. The average person will pick it up and he could. It's a patent test. Are you with me? The more complex it is, the more you want it supported in this text.

Simon Bernstein: What if it is basically simple, and he just wrote it as basically simple, does that support our position anyway though?

Boehm: Does that support our...Sure...

Simon Bernstein: I mean, if we were to litigate against another person that infringes on our...

Boehm: An infringer.

Simon Bernstein: Supportable for the sake of argument?

Boehm: Right. Yes. That is a fair argument

Simon Bernstein: OK so then I don't know that, at least from first blush

Bernstein: That's the provisional you're reading though, right?

Boehm: Aren't they the same? I think they're identical, aren't they?

Boehm: You can check in his notebook.

Boehm: Are there differences?

Bernstein: Where did you find that piece that you just read?

Wheeler: Is the reason...now continue answering my question...is the reason we came to the formal in March of this year, which I didn't realize that Joao. I thought that we had agreements for doing everything, but apparently Joao filed...

Boehm: For that one, yes.

Wheeler: But he didn't bother telling anybody.

Boehm: That's the one that we didn't find out until way late.

Wheeler: Okay, perhaps the reason that he did that was that was the easiest way to do it and the course of least resistance, and he thought he could go back...is there an amendment procedure?

Boehm: Yeah, there's an amendment procedure.

Wheeler: That he could do it a few months later or something like that?

Utley: We had a conversation before the formal filing, and, in fact, I have my notes here from that conversation.

Wheeler: Okay.

Bernstein: And you mentioned that there was no zoom.

Utley: Yeah, I said...

Bernstein: Claim one.

Utley: Yeah, Here are my notes. This is my original copy. Claims do not reference stitching. The patent app does not cover providing enhanced digital image with zoom and pan controls. It covers for creating enhanced images to show zoom and pan functionality without distortion." Those are my notes.

Bernstein: And you told him that.

Simon Bernstein: Here's a man that was cognizant of what was necessary to be in there. How did a guy to file a patent without any of us--obviously, not me, but Eliot, Brian.?

Boehm: Jim wasn't around yet.

Simon Bernstein: Okay, but Chris was and so on and so forth--how did they get through the crack that he did this?

Wheeler: It didn't get through the crack. Brian addressed it with him.

Bernstein: And everything is shredded now, too. Everything else is shredded.

Utley: Kind of what he was going to do--his time factor--he was going to...he didn't think he would get this in. He would submit it and then would turn right around and amend it.

Boehm: Did he really say that?

Bernstein: Yeah.

Utley: I wouldn't say amended, it was because of the stuff that was coming...

Bernstein: It was supposed to be in there.

Utley: ...he was going to smash that all together and file it.

Simon Bernstein: Was that the same time, Brian, that he was leaving the firm?

Bernstein: Yeah.

Simon Bernstein: So would you say that probably...

Utley: he knew at the time that he probably would be leaving?

Utley: Right.

Simon: But he wanted to get all of this in place so he could do the billing and get that part of it in...

Utley: I don't know that.

Boehm: Just speculating.

Eliot Bernstein: What day did you give him those notes?

Simon Bernstein: I don't ever have to speculate on billing

Utley: I don't have my address book with me...I didn't write the date down, but it was the date that he was here. He came.

Wheeler: He wanted to get it done to take care of you, make sure it was filed for you.

Simon Bernstein: That could be too. One other reason is...

Wheeler: We're just speculating.

Wheeler: And I'm not trying to... <Everyone talking at once.> I thought he was trying to work on our best behalf, but one time or two times that I met him, it seems like he was earnestly trying to help. Who knows? Maybe he was incompetent. I mean we're only suggesting that it would have been incompetence

Bernstein: Well, the fact that it's not in your patents, right up front, this is the invention, is a gross neglect. And the fact that it doesn't say, "this is what the invention is trying to do. This is the feature..."

Simon Bernstein: The point is not whether it's gross neglect or not, it's what the damage is if there is...if, one, gross neglect is of any import; and two, what is the damage? it has caused iviewit. That's what I think we need to ascertain here, and if we can ascertain it.

Utley: How do we fix it?

Simon Bernstein: Of course lets try to fix it, if we can't fix it then we'll worry about...

Eliot Bernstein: Well 1st- lets fix it

<Everyone talking at once.>

Boehm: Let me go over the procedures so everybody's clear. Again, on one end of the spectrum you file a very sparse, like a one-page provisional application, and it's cheap, and the purpose of the provisional is to get you in line...it is to protect your date. What you're trying to do is get the benefit of your priority date. When you invented it. When you're in line in terms of whose the next guy that invented it. Whose the first inventor?

Simon Bernstein: Someone comes after you the second day after...

Boehm: Who's the first inventor, that's what you're after.

Simon: I understand. I really understand...you don't physically stand...

Boehm: Not physically in line in the patent office is right, not or even in physically in line in order as well. Okay. One-year letter, the provisional expires and you have to file a non-provisional patent application, okay? Many times it's identical. If you do a good job up front, you just file that, but you need to put claims on at this time. When I do a provisional, I try, if there is money and time up front, to do it once up front. I even write the claims. As a matter of fact, I don't even like to file provisionals because there's not much of an advantage. If you've got the time and the money up front to do a good job, well then, just file it as a regular application.

Simon: Understand that at the beginning, the time and the money...I mean, the time was certainly available, but the money was a short substance. So it was obvious that Ray would be working in a most expeditious way.

Boehm: Well, that's why the..

Simon: Which might have short-circuited us because of all of the lack of funds.

Wheeler: Well, that's true because the filing date is 3/24/99 to endorse that...that was very early in the game.

Simon: We did it in your office Chris in your library...in your conference room. The only meeting I had with him was while we were going to file the patent and that was in your office.

Boehm: Okay, 3/24/99 is the provisional application.

Bernstein: That's what I'm saying. Well, Chris,

Boehm: So even at a year, he filed the second one with claims.

Buchsbaum: Yeah two things happened during the year. One, the Company was doing other things, even though they knew that was coming up, and two, I guess there wasn't a whole lot of money to allocate towards doing that much.

Simon: Here's what we did. We hired Ray Joao on the monies that were raised by the investors; and then when Huizenga was coming in with their money, and when that money came in, we made a company decision that the first and foremost thing was to get the patent filed properly. So the fact that we were going to spend more money and get them completed at that point had already been made.

Simon: Okay, but prior to that, we were working on short forms. Then after that, we started to raise capital, and we always knew that the priority was intellectual property, so were going to make sure that those got done right. Brian's been working on it ever since, and I felt comfortable...I never did feel comfortable with Ray Joao...just an observation.

Boehm: Hmm...is it all patent attorneys? <Laughter>

Simon: No, no, there's nothing wrong. He came in, he's a nice guy, he tried hard, you know, all the nice things, but his work always appeared sloppy, okay? And that's the only thing I can say. You're a patent attorney, you see what he did. If I'm wrong, then let me know; but to me, it looked like it was a little slipshod. And then he made some statements that really bothered me, too, that I don't think he should have made to a client, and that is that he was filing his own patent. <Chuckling.> I mean, horseshit personally, I haven't heard of a patent attorney in my life telling me that he's an inventor filing his own patent. It really did bother me.

<Everyone talking at once.>

Bernstein: Transmitting video files on a communication network for airlines and...

Simon: It probably meant nothing because I don't think the guy was of the nature to be stealing from us, but I don't know! But I'll tell you this, it did ring a bell. From a pure novice, it made me a little nervous. I asked Eliot why he was dealing with somebody, but we were assured that this was a good firm...

Boehm: Let me look back in my own spiel...here with the provisional. You file a provisional, then within one year, you file a regular application with the claims. You can add claims to it; but if you add subject matter to it—in other words, if the zoom and pan concept wasn't well described, you have lost the benefit of that first phase. Right. Now

why is that going to hurt you? Two main reasons. One is if you put it on sale—offered it for sale— or you publicly disclosed it, there are certain regulations that say you've got to get something on file, so if you had publicly disclosed it, that would protect...getting the application on file will protect you from losing your date because of public disclosure and offer for sale. I think that's what he was trying to get the earlier dates for.

Simon: Sure.

Boehm: I spoke with Ray when I was trying to get all of these files, and his comments to me were...when we were on the phone—you remember, we were asking him where was this stuff, and he said, well, he kept building on and he learned more it got in there. After I reviewed these applications, I agree that you're learning more as you go along. I'm doing the same thing. So it's kind of a learning curve.

Bernstein: If they ever find a zoom description that adequately makes...especially in the claims...I mean, if you're reading the claims...

Boehm: But Eliot, he's going to say that the claims are of no import right now. All you have to do...

Bernstein: In the filings?

Boehm: In the filings. I can go amend those right now. We can sit down today and re-write them.

Simon: If it can be amended amend it. There's no problems.

Boehm: There's no problems.

Simon Bernstein: There's always maybe a little money that's been duplicated and that's it.

Boehm: Here's the problem, and that's what I want to get across about that. If he's trying to claim zoom and pan and I rewrite the claims to claim zoom and pan, and the examiner says, that's great, but it's new matter

Bernstein: But it's in the provisional that you can zoom up to 1700 times.

Boehm: If my claim is supported by the spec on that date, then you're fine.

Bernstein: Isn't it?

Boehm: I can't answer that without going into the...

Bernstein: But when we read the provisional and we see that, it says...

Simon Bernstein: Before this meeting took place, before we called this meeting, aren't you privy to everything that's been done?

Boehm: Oh, sure. I have everything.

Simon Bernstein: So when Eliot asked you that question, why can't you answer it?

Boehm: Because there's no...in my opinion, there's no clear-cut answer, yes or no, on the quality of the work product. It's a judgment call.

Bernstein: So that's an exposure, and what if the judgment is against us?

Wheeler: It's [an examiner] judgment call is what we're saying.

Boehm: The damage?

Wheeler: No, the examiner. <Everyone talking at once.>

Wheeler: Whether the subject matter is new or not.

Boehm: The examiner would...hold on...it's...

Wheeler: whose judgment call is it?

Boehm: It could be the examiner's, if he catches it. If it's not caught, and you get it to patent and you litigate the patent, ... at court. Or if the examiner catches it and I want to appeal it to the board of appeals in the patent office, it's their judgment call

Wheeler: Okay, so we go to court and we're fighting over the patent, we would argue that it's supported by the zoom 1700 in our language, and the other side would, say that's baloney that's too broad you didn't describe it enough

Boehm: You didn't have your invention...

Bernstein: Then you lose.

Boehm: We would lose only if you had a bar date come in there if somebody else invented before you, or if you put something on sale...or if we offered something up for sale.

Bernstein: Which we did.

Boehm: But the offer-for-sale date from our first meeting is not until September.

Bernstein: Right.

Boehm: So the offers for sale won't normally kick off a foreign...

Simon Bernstein: Could you explain to me what offer for sale means?

Boehm: Sure. As soon as you...you can't get a patent on a product after you've been using it for more than a year. As soon as you publicly disclose your invention, you've got one year in the United States to get a patent on file, okay? Even if you don't publicly disclose it...let's say I've got a method of making [] in my factory, but it never gets outside. I'm starting to commercialize it, I'm making money off my invention...the commercialization date a year later is you can't patent it in the U.S. So that's that one-year grace period.

Simon Bernstein: Aren't we within that period?

Boehm: Yes. As far as we know, yeah. As far as we know.

Utley: Yes--yes we are within that grace period

Simon: Okay, somebody explain to me, what am I doing here? Why am I sitting here? Are we saying that Ray Joao, other than being sloppy, but there's not much damage that could have been done or can be done because we can fix it, which really would make me the happiest to hear that.

[not in transcript: PSL look at change above although minor it indicates perhaps the change in text to match new text]

Utley: Can I jump in? Let's just say there are two steps. We're going to make a filing this week; and to the best of our knowledge, we have swept up all this in this filing, and that will be within the commercialization period. The second thing that we're going to do is we're going to look at filing an addendum to the original formal filing to strengthen the claims - broaden the claims ... to the maximum extent that we can.

Boehm: if we need it...if we need it.

Boehm: It'll be a lot of this was swept up into the application.

Utley: What we're trying to do is protect the date day of March 24

Boehm: The original...

Utley: The original date as March the 24th, but filing should remain an objective.

Simon Bernstein: Brian, if you broadened the language now, would that be a red flag to the commissioner that you should have done it earlier? Or should we just say that this has always been there?

Buchsbaum: You mean the examiner of the commission

Bernstein: We're not going to be able to say it was in the claim.

Simon Bernstein: What happens when you start those amendments or broaden them is you start to admit that you didn't do it.

Boehm: Um, yes and no. We...I do that all the time.

Simon Bernstein: It's common then?

Bernstein: If they do it all the time, then we have to do it.

Simon Bernstein: But not until I feel more comfortable with it.

Boehm: We normally have a search done. The patent examiner will do a patentability search, and he will come back and reject it. The problem is if the claims are too narrow to begin with, he will not come back and reject it, he'll allow it, and boom! Now I can't amend it he's in. [], we're done. But I can file an continuation on it. I can keep dragging this out and get broader claims as long as the subject matter is...

Wheeler: So that's why he stated it broadly versus narrowly?

Boehm: No.

<Somebody comes into the room to take food/and or drink orders.>

Boehm: No, but as far as, doing it broadly, if you're saying to claim it broadly it's our job to claim... as prior art which I doubt the claim is as broad as the [] allows...

Wheeler: Right. That's what I'm saying.

Boehm: And this is claimed broadly.

Wheeler: Right.

Boehm: And that's the normal tactic, to claim things broadly, and then wait for the examiner to come back and say, "Oh, you can't get it that broad," and then narrow down your claim.

Wheeler: Okay, so isn't that what he was in part trying to do? That's what he's been saying, yeah.

Boehm: Yeah.

Wheeler: Well, would that not be consistent with how patent attorneys try to do things?

Bernstein: Well, claim one, if you look at their claim one, Chris, that they've written, it identifies...

Wheeler: Who's they?

Bernstein: Foley & Lardner. It identifies what you're trying to do.
[not in transcript: Stephen note how Dicks name is deleted and Foley's name is screwed up, may indicate who was changing this transcript]

Wheeler: Okay, so maybe it should have been written differently.

Boehm: You won't get two patent attorneys to write the same claims.

Bernstein: Well, no, but you try to write the claim, and that's the teaching you and Steve both represented us here, to describe in its broadest term...

Boehm: Right.

Bernstein: ...the invention.

Boehm: Well, I can't say that this isn't broad. This is very broad. This might be rejected for indefiniteness...I don't know what it is...but now he's got the opportunity to go back and...

Bernstein: And Brian, you know, there's print film image in here, it's all supposed to be out of here.

Wheeler: What you're telling me is that in your forum of law there's always going back and refining and refining and refining that was wrong.
<Everyone talking at once; two different conversations going on at once.>

Bernstein: This is like he just completely ignored what we said over a year. He didn't do a thing. Nothing. No comments, nothing.

Utley: Almost nothing between the provisional and the formal process.

Boehm: And some people intentionally file narrow just to get something on file. Then they can come back and repair it without damage to it.

Bernstein: But you don't know that because an examiner...

Simon Bernstein: You'll never know that until you have a litigation.

Bernstein: And then the question is what potential damage does that...

Simon: That damage potential and that remedy will be then taking place at that time, not now.

Boehm: That I agree with. Even if we decide something now, you won't know what the outcome is for five and a half months.

Simon Bernstein: ...wouldn't happen anyway. You wouldn't even know that.

Utley: Let me come back where I was. We are going to file on the 7th, Wednesday. As far as we know, that will cover every element of this invention that we have our arms around at this point in time.

Boehm: I believe so, yes.

Utley: And we should go back and address what amendments we can make to the claims in the filing of March this year and determine within the spec of the filing how broad those claims can be. I mean, that's going to be the test. Within the spec of that filing, how much leverage have we got to broaden those claims so that we do have a priority date which is back about a year ago last March.

Bernstein: So we want to insert everything going into this one into that one?

Utley: No, it'll be...

Utley: It'll be based upon the preamble, if you will, of what's in here.

Boehm: We do reference it. As a matter of fact, this is the cover page, Brian, of the application we're going to file.

Utley: Yeah, you reference it right there.

Bernstein: But you can add claims to that one that you're referencing that would encompass what we have in today's filing, which is really...we do want it in there.

Boehm: Yes, I can claims to the zoom and pan to get you back to the original date in this one since I claim to this onto his.

Bernstein: Well, we should do both.

Boehm: Well, you can't get two patents on the same invention, so it depends on where we want to go.

Bernstein: Well, we want to definitely get it in on his because it gets us an earlier date. Correct?

Boehm: No. It's a mess with these dates. What will happen is...nobody will worry about the date unless there's an occurrence, and that occurrence might... it's a major problem. You won't find out about that occurrence until you sue somebody, and then they go search in Australia, and they find a reference that somebody's done this before in the library, and then you worry about the date. Were you before him?

Bernstein: Well, that's what I'm worried about. I'd like to go back to our earliest date.

Wheeler: Can I point out one other thing? I know we look for the word...Eliot looks for the word...I know we look for the word "zoom," but there's also other language in here too. Sometimes we get caught up in a word "zoom," when what is zooming other than enlarging or reducing? And he does have language in here, "when enlarged or reduced, these pixels of the digital image becoming distorted a feature which

typically results in the digital image being fixed to an original size or being available at low magnification, such as, for example, magnification from 200 to 300 times. These digital images are also difficult to enlarge to a full screen without a tremendous amount of distortion present in the end product."

Wheeler: I mean, he's describing I mean that's zooming. Reducing and enlarging is zooming.

Bernstein: But he's not putting it in your claims, that's what he's saying. You see, this is different.

Boehm: But it doesn't matter right now

Wheeler: But it doesn't have to be if you've made mention. The opinion is that it doesn't have to be as long as he's ...if you made mention...if you've gone on record of having described this

Boehm: This is the background that's...problem. He's got...

Boehm: That kind of invention, right, it's got to state...

Wheeler: Well, I didn't get to that either.

Bernstein: Right. And that's where it's not.

Boehm: I pointed out a couple of things. It's not as...

Bernstein: Within the claims, the claims I'm reading, you could not...

Boehm: The claims really don't matter.

Bernstein: In the patent?

Boehm: The patent claims on a pending application basically don't matter.

Bernstein: No, the ones he filed.

Boehm: Yeah, they basically don't matter. I can go back and change them.

Bernstein: Okay. Why? So we want to change back to the original one he's filed, put as much language as we can that we have today...oh, it's all supported. Everything you wrote in that new one is supported in this one because it's the same process.

Boehm: That's the ultimate problem that Steve and I—Steve is Becker, the other patent attorney that actually wrote these patents <in audible>—but that's the ultimate problem that we're worried about, and that's the problem that you always worry about unless you first of all have a handle on the invention, inside and outside, and second of all, unless you really have a handle on Prior Art so you know where you

want to go with this. Then you spend the time and the money to do a good original provisional filing. You've got a pretty good shot that it's supported then. But when you file as, oh, I've got to try and cover this base, and when you do this kind of stuff, there's always going to be a question of what was supported when.

Bernstein: But that's fine. It is supported.

Simon Bernstein: We're off the subject matter.

Bernstein: So we should definitely claim back to the earlier date?

Boehm: We may get a rejection, or you may find out in litigation five years from now, that none of this was supported. Some court may say that you never talked how to do this because your software wasn't in the patent application.

Bernstein: It is, though.

Boehm: Well, the code isn't. They might say that these broad diagrams and these flowcharts aren't good enough. There's always that risk.

Bernstein: But we're trying to say that if they accept it, we want it to be to the furthest filing date that we can, which is March 3, 2000, and that's where it should lie; and if it's going to get argued let it live or die at that date.

Boehm: That's what we're trying to do right now.

Bernstein: Okay, good. So I'm under the impression from this point that we're going to encompass what we've learned what we're filing even in this other one even into the original one so we can claim back to a March 3 filing date that claims back to our original March patent...

Boehm: March 24th, yeah, all of that will go back toward what is supported in here, in the original. Not supported in ours.

Bernstein: Okay. And it's all going to be supportable because you're going to be able to pull up an image of the nature that we are discussing, and anybody with an eye can see that you've now done this.

Boehm: <Inaudible comment.>

Bernstein: Well, you're going to be able to show your invention, aren't you?

Boehm: No, no.

Bernstein: You can't?

Boehm: You live or die on what's in the specs. That's why...

Bernstein: Then get it in there.

Boehm: Yeah.

Bernstein: You can't bring it in as evidence what the invention is?

Boehm: Only outside evidence of what the average level of skill in the art is, okay? If somebody says that the flowchart isn't detailed enough, I'm going to go, "Oh, yes it is. Here's 29 programmers who are going to testify and say yeah, I can do that in my sleep with this document." So, there's always going to be a battle about the level of support.

Simon: Maurice and I—that's why I asked him to come in—Maurice and I were talking because neither one of us understands patents or how you file them or invention actually. What we do understand a little bit about is the theory in business; and now that we know that Ray Joao was somewhat sloppy—I'm not suggesting that he's not a fine attorney or anything else—you have been...you have reviewed all these patents that we have, whether there are eight or ten of them...

Boehm: There were eight original filings, and then...eight original filings.

Utley: Okay. And then how many do we have now?

Boehm: Let's look at the chart right now, but it's basically. We've got 17 applications that have been filed. These old ones are dead now because they were provisionals, and we've basically covered all...we pointed out basically covering two, maybe three inventions, so there's not...I mean, if we were to start over, maybe you'd do this with two patents, maybe one patent. So.

Simon Bernstein: Who owns them?

Boehm: Who owns it? iviewit Holdings, Inc.

Utley: Owns all of them?

Boehm: Except for...<Pause, and then text comes in that doesn't seem to be answering this open question.>

? Video playback over a network

Wheeler: How did he get in? [not in transcript but this refers to Jeff Friedstein on an invention]

Bernstein: He's part of the invention.

Boehm: An inventor - inventorship.

Boehm: So I've so I've got a document right here for him to sign. If he signs, then I do a couple of things.

Bernstein: He signed that when you faxed it to him originally.

Wheeler: I have copies of each one of these. Can I get a copy of your []?

Boehm: of this? Sure.

Wheeler: I have a copy of each one of these, I believe, or most of them...

Buchsbaum: Can I ask you a question? Your saying everybody that has an obligation to sign is on the list of names in these patents?

Boehm: You preferably don't...well, unless you have the new ones...

Wheeler: I don't have the new ones, but...

Bernstein: That's an old one. That's old.

Buchsbaum: You're saying everybody that has an obligation to sign is on the list of names in these patents right, because the company was part because the Company was doing, is that what you're saying? Because I don't even know if everybody has signed because you may due corporate due diligence for financial reasons or if...and they will say has everybody signed off on these patents, and if three people don't...if one person hasn't, he has an obligation to sign?

Boehm: Brian, have you signed?

Buchsbaum: Has everybody signed off on these? Brian?

Boehm: See these tabs [refers to tabs for inventors Bernstein, Shirajee, Friedstein and Rosario to sign] right here? That's what I'm trying to do today. As soon as...I'm going to have people sign, me sign...all the inventors sign. I've got to get a hold of Jeff

Bernstein: I thought we did that when we filed.

Boehm: You only signed one real document, didn't you? Did you actually a declaration? I know you didn't sign an assignment over but you're real clean on it because these are all based on the original filing , which is assigned to iviewit holding already

Bernstein: What's that mean?

Boehm: So all of the other inventors would have a helluva problem trying to say they owned anything.

Simon: Again, this is a little off the subject matter, but I have asked Chris about it before. If something were to happen to iviewit, and it were it went into bankruptcy, what would happen to those patents? How would those patents []?

Wheeler: It depends on which at iviewit you're talking about.

Simon Bernstein: The one that they are held in.

Wheeler: Well, first of all, holdings is held separately versus...we're operating the company out of a separate entity, correct? iviewit.com. So, let me think there...

Buchsbaum: The operating company is iviewit.com.

Simon Bernstein: All I'm concerned about is, for example, that the largest creditor...it wouldn't be a creditor, it would actually be an investor...would then...

Bernstein: They're not a creditor.

Buchsbaum: Okay, then the largest creditor could come in and pierce the corporate veil of iviewit.com and say that this is just a way of protecting the only valuable asset of the company away from creditors. Is there a possibility of that?

Boehm: Obviously there is.

Wheeler: There is a possibility, but that's one of the main reasons... But the loan, they made the company who wrote the patent, join in as a guarantor anyway on it.

Bernstein: Well, that would be all of us. All of those would be all of the investors getting a piece back?

Wheeler: No, no, no. On the \$800,000 loan, those people, it's secured by the patent.

Simon Bernstein: What about the \$600,000...or the other \$800,000 loan?

Wheeler: The others weren't loans. The others were equity, as I recall.

Simon Bernstein: No, no, they have claims.

Bernstein: Well, they're supposed to be converted to equity, which is another issue.

Utley: But there where note holders

Wheeler: No, because there was no quid pro quo at that time. The note holders I mean you can't go back and do it, we had that talk Si

Wheeler: I mean, you can't go back...

Bernstein: The note? I believe they're not final, even though we told people they would be by this time.

Wheeler: The note holders took their money in without taking security. Now you...<Indecipherable. Everyone talking at once.> ...new considerations...I said now you can't ... back to a failure to the corporation

Simon Bernstein: ...Board if everybody that was a creditor found, everybody that was a note holder at that point there was no what would you call it - problem

Buchsbaum: and that would be protected by the courts anyway usually. The court would see this probably as a you know a fraud

Wheeler: You could have two frauds: fraud of creditors and fraud of shareholders.

Simon: No, Chris I'm not worried about fraud. I'm really concerned with the fact that what we did here, the last loan that we took in, from...

Bernstein: Crossbow.

Simon: No, not from Crossbar...

Bernstein: Crossbow.

Wheeler: Crossbow

Simon: ...is secured by the...

Wheeler: ...the term of the deal, right.

Simon: And that's perfectly acceptable to me except that everybody else that had loans prior to that at that time should have been considered with the same equity because ...posses able and Chris told me that that was the perfect time to get it done

Bernstein: Yeah, but would Huizenga lose his?

Bernstein: Would Huizenga lose his stake in it to Crossbow?

Wheeler: No, no, no, it wasn't...I said that if there was going to be new considerations from those people, we all could of...??

Simon: We all could have put in another \$10. I mean, at the time we did it with Crossbow, we should have made sure that our other people...

Bernstein: Are protected.

Utley: No, no, no. We would have had to issue new contracts out for everyone.

Wheeler: There would have had to have been some material consideration, not just \$10. It would have been...

Simon: So it would have been \$10,000...

Wheeler: Well, then, you could have...Crossbow, we didn't even talk about Crossbow at that moment, and I said you couldn't go back and just collateralize. You couldn't go back for money that you already put in. But if you put in new

considerations that you could demand as a condition to be collateral.

Simon: What we should have done, or what we maybe we still should do to protect our original group of investors, is to have them pony up a few more thousand or whatever you think is legitimate, and amend the contracts to protect them as well.

Utley: That's new subject matter.

Simon: Well, I only brought it up because it had to do with the patents.

Utley: I know but can we finish the patent discussions before we bring up new subject matter.

Simon: You can, but I want to make sure that we do finish.

Utley: No, I agree with you Si.

Si: The problem is that I made claims to certain people like Don Kane, who put up \$100,000, who thinks...

Bernstein: Let's get back to that. No, let's get back to it. It's a definite point. There are people.

Buchsbaum: This is a business issue for later.

Bernstein: No, we're asked by these very people these questions.

Boehm: Did you get your question answered on the...

Buchsbaum: Yeah, I just wanted to understand...you know, I got an answer. It had to do with the obligations Si I was trying to understand if somebody does due diligence now with regards to understanding what is there and what has to be done, like those yellow tabs. [Yellow tabs indicate signatures of missing inventors]

Boehm: Yeah, but after...I find everybody, we can get guys to sign.

Buchsbaum: We aren't that many. I don't know on that sheet what you have, but I don't think there are that many names. There's what about five names?

Buchsbaum: There aren't that many...you don't have that many. I don't know on that sheet you have, I don't think there's that many names.

Boehm: No, there's not.

Boehm: So we have everybody but Jeff, if we can get Jude and Zak.

Buchsbaum: You just have to get people around and sign.

Boehm: No, that should not be an issue.

Buchsbaum: That might be questions brought up when people do do due diligence. Is everybody else on these?

Bernstein: That's why we're closing it. Right?

Boehm: We'll record what was in the patent office(...???) can do.

Utley: The other piece that's not in any part of the original filings, which is the reduction of the technology to a disciplined process—the mathematical representations of what's in and how it works and stuff like that.

Wheeler: (...???)

Buchsbaum: That will also be included in there, right?

Utley: We'll put it in the new filing...one of the new filings.

Wheeler: I form my opinion of everything, and we can talk about post solutions but I think Brian wants to get this back on track, but to me there's bad news and there's good news in this. The bad news is, just like anything in life, perhaps we would have liked to have tidied up some things better, like to have had Mr. Joao tidy them up. The good news is considering the state that the corporation was in in the early stages and the variable limited resources that it had, I'm glad that we have an awful lot on record that we do have on record, to be honest with you.

Simon: As long as it's not to the detriment of what we thought we were filing, I have no...I couldn't agree with you more.

Wheeler: But I think I like your approach, and I assume it's your approach, too, in that I assume that you're doing a fairly comprehensive new one, but then you're going to probably...

Utley: Claim priority back to the old one.

Wheeler: Right, but you're also going to do your amendment because now we're finding out that it's not an uncommon procedure and it's not a red flag.

Utley: Two things: the new filing on Wednesday will claim priority all the way back for as much as possible back to March 24th last year. Second, we will look at the March 24th year 2000 filing and determine how we should amend that to include additional claims and broaden that filing so that it more fully represents the knowledge of the invention as of that time.

Bernstein: Does it claim all the way back?

Wheeler: It'll go all the way back...

Boehm: as long as you don't go outside what was described.

Bernstein: No, the math is just describing the original invention.

Boehm: We'll, I'll never know the answer to that until it's litigated.

Utley: Due diligence.

Bernstein: Right, but from your perspective here, that's what we're setting up. Correct?

Boehm: We're going to try.

Bernstein: Okay.

Boehm: The question never even gets answered half the time in the real world. I will claim priority back on the document, and then if the examiner doesn't care, nobody cares

Bernstein: It gets through.

Boehm: It gets through.

Wheeler: Would it be a fair assessment—I'm posing this more as a novice, not as an attorney here—since we're not at IBM and we don't sit down at the very beginning and work out all these equations and all that, that in an invention such as this by a Ma-and-Pa type of inventor, and now since we're getting into the nuts and bolts and really uncovering, in essence, what's behind it, as Brian dissected it as we moved along, but that's all we're doing? I mean, that Ma-and-Pa inventors do that as they go along? They add the flesh to the bones as they go along?

Boehm: Boy, that happens, and we try not...we try to minimize the amount because if the flesh that you have to add is new subject matter and you've already sold your invention a year ago, you're dead.

Wheeler: Well no, Let me at it a different way. It does this, but I can't describe how it does this. But now we find out...we tell you what it does, now we're telling you in detail how it does it.

Boehm: Yeah, in terms of we claimed it properly.

Wheeler: So I'm not adding flesh in defense...

Simon: New flesh.

Wheeler: ...new flesh. I've got the box, now I'm disclosing what's in the box including the gears and how it works.

Bernstein: No.

Utley: No. Here's what the big difference is. The original filing claims a process for print film imaging.

Bernstein: Well, that was all stricken, by the way. That's why I'm having a big problem. I was going to get to that next, Brian.

Utley: Okay, good.

Bernstein: But we have discussed with Ray Joao numerous times to take out the references to print images out of this right here. Over the course of the year in the 59,000 modifications back and forth, we continuously pushed him away from the words that I see in this filing, and that's what's so disturbing to me because we sat here when...

<End Side 1; begin Side 2>

Buchsbaum: That would be conditional, probably.

Simon: Right, they probably will.

Wheeler: Their not going to want in fact their going to say take it off aren't they

Utley: No Crossbow notes would be converted to equity when someone else comes in.

Si? Of course, and that's gone. And those issues are gone.

Wheeler: Well, Yeah, so that it was the ...it was intelligent way to do it...and I'm not...

Buchsbaum: Crossbow would probably manage the million dollars anyway

Wheeler: By the way, if we did do a deal by which we tried to collateralize it even further, then we'd have to have some sort of provisions as well to get rid of your collateral.

Simon: Yes, of course. As soon as it converts to equity, it's gone.

Wheeler: But I mean, what if you didn't convert yours to equity[]?

Simon: Then you'd have to lose it anyway.

Wheeler: But at a point.

Utley: It just becomes a normal stockholder...

Simon: Right.

Wheeler: It would have to drop away or something. For instance, it would drop away when theirs drops away.

Utley: The stockholders, in the event of a default, the stockholders, the distribution that takes place, includes all the stockholders according to the rank of the preference. So the preferred get first cut, and the common stockholders get the second cut, whatever is left for

distribution. But of that amount[] unless there's nothing to distribute.

Simon: Not if one of the preferred stockholders has a collateralized position and the others don't. If one of these preferred stockholders...

Utley: There's no stockholders that have a collateralized position.

Simon: That's true.

Buchsbaum: You're talking about the small amount of money, that have any value, it should be reasonable value, and those would be taken out anyway.

Simon: Except that we seem to feel that we have an obligation to those, to protect the other stockholders who...had all good...I think its prudent anybody to ask permission

Buchsbaum: A good way to do it is the way he said to do it, and that's to [?].

Utley: Will you look it up and see what it's going to take to do it?

Wheeler: I'll coordinate that

Utley: I'm not clear. What are we trying to do? Are we trying to provide for collateral for new money coming in, or are we trying to...? We're not trying to collateralize money which has already been...

Simon: I don't know. Can you handle the old money the same way? I don't think so.

Wheeler: We have to see. We might be able to consider it for the full amount in the view of the fact that if you had enough substantial new consideration, ...

Buchsbaum: The problem is that you may have to go back to Crossbow to do that, and you may be better off just to do it on subsequent money.

Simon: Well, but to ask Don Kane to put up \$10,000 when he's got \$160,000 in the...\$135,000 in the company, and then he only gets 10%...\$10,000 worth of consideration...I'd like to protect his whole \$165,000, which is what he has.

Buchsbaum: The answer is you go back and ...

Utley: I don't think you can do that because that's equity. It's in common stock.

Bernstein: It's not equity. It's a loan.

Bernstein: Don had the stock prior to his putting up the money. These are loans. There's \$400,000 that's on the books. Then there's another \$100,000 besides what he put in originally. Sal has a loan on the books of \$25,000. Your guy should have had a loan on the books for \$250,000.

Utley: No, that's equity. Okay.

Simon: At any rate, <tape cuts out[tape does not cut out on my tape]>...While I got Chris here I'm going to take advantage of his being here.

Simon: One of the issues we tried to do when we raised the last \$80,000 that came from Eliot's two friends Anderson and Mitch Welsch. []

Bernstein: Ken Anderson.

Simon: It was my knowledge, according to Jerry, that those monies were to go to Eliot, and then Eliot was theoretically to loan the money to the company so that Eliot would have a loan on the books and he would have sold his stock because Eliot has some personal needs that he needs to accomplish as soon as we get funded or we get some money in here. I'm under the understanding again. It could be way off.

Bernstein: How do we work that out, Brian? The 10? A loan?

Utley: Yeah, that's better because otherwise you will get taxed.

Bernstein: Will they loan me \$10,000 to pay the taxes?

Simon: Who loaned you?

Bernstein: The company just today?

Utley: So I took that as a loan?

Utley: Yes.

Bernstein: The money went to the company, which spent the money already—the stock money—from Ken and Mitch.

Simon: You haven't sold any of your stock?

Bernstein: No.

Simon: You just made an officer's loan.

Wheeler: Right.

Simon: Is that how you handle it?

Simon: You loan the loan back by some method at some point.

Bernstein: Right. Correct.

Buchsbaum: That's the way to do that?

Utley: Well, there's no tax impact...

Simon: but he would have had a [] gain.

Bernstein: Right. And there were other things at the time...right, things. At the time, the company needed the money and I didn't...not that I didn't

Simon: Sure, I just wanted to make sure that it was done. I didn't even know ...???that bank account

Bernstein: Not that I didn't.

Simon: Let's finish up.

Utley: Eliot, let me summarize. I want to make sure we have an agreement of this meeting. Let me interject two final two points that we kind of skimmed over. One is you said that we want to go ahead and change the claims to go all the way back on this US, but we have sort of got covered on the one we're filing? The one we're filing is a PCT. It won't pop to the US for 18 or 30 months. Or we could file another PCT and a US, then the claims would hit the US. In other words what I'm saying is it would matter if we do the claims here. We could either fix up the claims here or file a PCT and a parallel US if you want US patent protection sooner. The PCT will split out to US, but not until later. You can file a US anytime...

Simon: Let me ask you. You're not a lawyer, what do you recommend?

Boehm: Well, it's more money up front.

Simon: How much money? A great sum of money?

Boehm: No, it's another grand to file.

Simon: For what we've spent already, let's do it.

Bernstein: And that protects us better?

Boehm: Quicker. You'll get a quicker US patent. It'll get you in line quicker.

Utley: The other point that you're making because in this week's filing we are going to claim all the way back...

Boehm: We're going to claim all the way back but this is what is supported

Utley: Right. So if we claim all the way back to March of last year, do we need to touch the filing that's already in motion?

Boehm: The one that's out there?

Utley: Yes the PCT. Do we need to touch that?

Boehm: No, no. There's a PCT and a US.

Utley: Right.

Boehm: The PCT, we will get a search back. In fact, we should get it in a month or so, and then you'll decide what you want to do with that, what foreign country and possibly the US, but he files the same thing basically in the US, and now it's in line in the US.

Utley: Right, right. But what I'm saying is if the new filing that we make this week creates priority all the way back and embraces all of the teachings of the prior...

Boehm: Zoom and pan stuff.

Utley: Zoom and pan stuff, filings, do we need to go and modify and update and amend those earlier filings?

Boehm: Those other two.

Buchsbaum: That's a good question would there be new recommendation?

Boehm: It depends on two things. One is how quickly do you want to get the US for the new filing? This is a PCT that we're preparing right now. If we file the US right away with it, then it makes less difference.

Bernstein: Less?

Boehm: Less difference because he's in line sooner. That's all. It just depends on how soon you want to get your patent.

Bernstein: Well, we want to go for the sooner.

Utley: The sooner the better.

Boehm: The sooner the better then let me play with this

Bernstein: Right.

Boehm: Plus you're gonna get an office action back from the patent office on him...

Bernstein: On that.

Boehm: For free. There's nothing involved.

Bernstein: Right, but it doesn't claim anything.

Boehm: I don't know yet. It claims...he'll get this blasted. It will will be rejected.

Bernstein: Yeah.

Boehm: It will be rejected. The question is do we want to fix this, or where are we with the other things? So there's no decisions to be made now on this, it's just that do you want to file a US and a PCT?

Utley: The answers yes

Boehm Yes

Bernstein: And we do want to fix the original work?

Boehm: We can decide that later.

Bernstein: Well, why would we leave it unfixed?

Boehm: Because you can't get two patents on the same thing. So if we fix this, you're not going to get it over here.

Bernstein: But then we lose the date.

Buchsbaum: No we don't.

Simon: That's what he's saying.

Buchsbaum: You really don't lose the date.

Wheeler: So were not going to...???

Utley: Because he's claiming all the way back.

Boehm: We may not. It depends on...

Bernstein: May and less, these are words that scare me.

Boehm: You don't like that, do you?

Bernstein: No, I do not.

Boehm: But I don't think this is the right time to make that decision now.

Utley: What is the right time?

Boehm: When we get some office action back on this patent. And when we hear from the patent office, we'll sit down say do we want to fix this, or do we want to fix this, or have we uncovered some killer Prior Art that blows this whole thing out of the water? You don't want to spend money right now if you can avoid it.

Wheeler: We've never done a search, have we?

Boehm: We did a search...I've done a search on...<Everyone talking at once.> on a dozen patents that really weren't on point. We didn't find any close Prior Art; and all I can tell these...

Wheeler: This was on imaging and video?

Boehm: Yeah.

Wheeler: That's incredible.

Buchsbaum: Yeah, it was huge.

Bernstein: If it is found impossible to do these things, why would people be doing them?

Boehm: I want to make...the tape recorders off, right? <Recorder turned off>

Buchsbaum: What does PCT mean?

Boehm: Patent Cooperation Treaty. It's a formal filing process for filing foreign patents.

Buchsbaum: Oh, that's the thing with the different countries?

Boehm: Yeah. So we file one application that splits out later to different countries.

Buchsbaum: Two years?

Boehm: Yes, but we'll get indicators before that. Our search comes in nine months, which is three months from now for the first one. But, Brian, they're searching this claim; this claim is crap. You're not going to get a good search on it.

Buchsbaum: So what? In six months or nine months, we'll start hearing from them?

Boehm: Yeah.

Bernstein: Well then we should do an alternate search on what you have.

Boehm: It's a judgment call. I mean, you asked me this question a while ago, and you said what would it take to get me comfortable because I'm kind of a pessimist and I'm an engineer, so I have that background where I look at it that it's half empty. It would take more searching, and it would take more searching inside the technical articles. And it would take quite a bit of work. I mean, I guess \$5,000, I don't know. It depends on what happens. Then, again, that will only raise you to a different level of comfort, that's all.

Bernstein: And then they'll say the same thing, and for another five grand, well get Rays to another indiscriminate level of comfort.

Boehm: Exactly. But we don't have to do that because we will be getting an article...

Bernstein: Right, from the searches.

Boehm: And from your investors because if I was working for them...

Buchsbaum: Let me put it another way. If you have somebody that will take this company and auction off the technology, okay? As it is existing...as it is unfolding, okay? And as the licenses come along. It's strategy. Some of these people bid on that. What are they really bidding on? It's potentials, right? Basically?

Boehm: Well, no, there's a present value of the technology. If you...

Buchsbaum: Well, not if you don't have patents issued on it.

Boehm: Well, sure there is. Sure there is. If he can get a royalty based on 2% of their products--or whatever it is--per minute, whether or not it is patented, absolutely.

Buchsbaum: My question is at what point does it become...is the efficacy there significantly enough from the standpoint of others now that would be doing their own review. You know, like, say a firm that would do the option. They'd have their patent lawyers take a look at what you're doing to see if they think it has a real good value. At what point does that come along? Is it six or nine months from now, basically? Is that when that probably would start to unfold as far as having a real relevant potential value? I've been trying to get a general..

Boehm: I understand your question. I guess I would answer...

Buchsbaum: General idea.

Boehm: If your licensees are spending a lot of money...

Buchsbaum: On your technology.

Boehm: On your technology, they're going to have their patent attorneys right now, today, go do a search, and they will have a good indication. They may come up with Prior Art that blows you out of the water. They may find nothing. They may not search it. They may say, we don't care about patents; it's the technology.

Buchsbaum: Reality, though, this is not the...more likely six to nine months as some licenses start to unfold here and as things start to come back, and that's when this thing will start to have some relevance more than it does right now? From the standpoint of the...

Boehm: That the patent will have relevance?

Buchsbaum: No, no. The technology has a value that can be created in the marketplace and turned to bidding.

Wheeler: Well, you can look at the technology as almost value added to the company. I mean, the company has worth because of the process and what we can provide and we can build it up. But it'll even astronomical more worth assuming that we have...that it's totally proprietary to ourselves. Now some companies have great technology that's proprietary to themselves, and it doesn't earn them money. For instance, Wang Laboratories went down the tubes. They had the best word processing, and they had the best of everything else. And, of course, a lot of their technology is licensed out there, as I understand it, to VisionAire and to...they did the true ones, and...

Buchsbaum: It's was also to get to the possible strategy for the company's investors, okay?

Utley: Right.

Buchsbaum: Or it may be at some point a window of huge value placed on this technology where you may take advantage of it.

Wheeler: Well, and to our investors, we have said, and we can continue to say, we are attempting to create a pool of intellectual property and protect it.

Buchsbaum: Okay.

Wheeler: But there can be no assurances that this will withstand the test of time.

Boehm: That is exactly it. And you never want even when it issues. You will get a good comfort level when you have a US patent issued in your hands.

Bernstein: Why?

Boehm: Because you've had an examination.

Buchsbaum: Because you've got some review.

Boehm: Because you have a presumption of validity.

Bernstein: That's why I'd like to get that first one corrected because that's the first one that's going to be examined.

Boehm: No, we've got one...oh, yeah, it is. It's the US.

Bernstein: And therefore I want that to be approved. The investors are going to say...

Buchsbaum: The first one that we're going to be issued will be issued in May.

Bernstein: And the investors are going to say what happened to patent one.

Boehm: 3/10 of 2000 was when it was filed. Typically a year...they'll get around to it within a year. Maybe it'll issue in. 18 months to two years

Buchsbaum: From right now or from then?

Boehm: From 3/10.

Bernstein: What is the process speed up? If you can show...

Boehm: If you can show somebody's infringing, you can have an expedited examination; but that doesn't always buy you much time, and you really have to get into the patent office the first time, and I'm not sure we can do that.

Wheeler: Wouldn't a good example of one way be that Apple had really great patents, and Microsoft was still able to come in and duplicate it, even though everyone knows they violated the hell out of the patent of Apple.

Boehm: Um, hum.

Wheeler: So I mean you could have a good patent and it could still go down the tubes. But another one I'm thinking of that did stand up was Polaroid had patents and Kodak tried to come in and do everything to distinguish, and wasn't able to and got clobbered, right? And there's probably a lot of every variation in between.

Boehm: Yeah. Wheeler: [Not in transcript this is strange here]

Wheeler: Are those the two extremes?

Boehm: Yeah,

Wheeler: those would be the two extremes.

Utley: Especially when it comes to method patents and software patents.

Wheeler: Yeah, what was the first thing that Brian

Boehm: ...and the more patents you have, the less chances. It's like putting out mine fields...less chances people to get around you. But if the original concept is broad enough and claimed right, Yeah, we can be okay.

Boehm: But what, the test - I guess what you're asking for is when we have that first claim promised, probably within two years of when you filed, which is March 10, 2000, I would probably say

Utley Doug come back, close it out again.
<Inaudible comment.>

Boehm: There were two points. One was the PCT and I got that in correct.

Buchsbaum: Right.

Boehm: The second point was everybody was saying you don't destroy documents. Lawyers do destroy documents; and in the patent realm, it is common practice to get rid of all of our attorney notes, but it depends on what the practice is in your law firm and your corporation. Most patent attorneys who use this practice that I've seen, it happens after it issues. You never do it before. I don't even like to do it then. I like to do it after all the...

Bernstein: I don't even understand why you're destroying it. If you've got nothing to hide and everything's on the up-and-up.

Boehm: But throw in the concept that I'm leaving the law firm. Let's say I'm leaving the law firm, my notes, who's going to follow up and destroy my notes to benefit you, because I do want them six months from now. Maybe that's what he's doing.

Wheeler: Yeah, he could have done it to protect you. He didn't want them around in the other office.

Bernstein: I don't know. I don't know. I don't even know if he knew he was leaving then.

Boehm: Now it's intentional!

Utley: But I want to comeback were going to file PCT and US on the new one. We're going to wait for the old one to get kicked back; and when it gets kicked back by the examiners, we'll then determine how we want to amend it. Is that what you said?

Boehm: No, I want to say something on that again. I think if you want a patent to pop quickly—if that's the goal, which sounds like it's a good goal—then, no, I think we should amend the claims with a preliminary amendment before the examination.

Utley: A preliminary amendment?

Boehm: A preliminary amendment.

Bernstein: Encompassing everything we can throw in there?

Boehm: Yeah, whatever support there is. But a preliminary amendment on whatever it is on the...

Bernstein: So we're going back to the original

Boehm: So I'll fix the 119 case yeah

Bernstein: March 3, 2000, to encompass what we've embraced.

Utley: When will you be in a position to recommend what that amendment will look like?

Bernstein: It should look a lot like the one we just did.

Boehm: Yeah, that's...

Bernstein: That's my guess.

Utley: When will you be in a position to...

Boehm: I'd have to...a few days...

Utley: About a week or so?

Boehm: Oh, Yeah, within a week, sure.

Bernstein: Okay. That's good.

<End of meeting.>

Transcription of Telephone Conference
Conducted August 2, 2000
Participants:
Eliot Participant, Jim Armstrong,
Brian Utley, Doug Boehm
Docket 57103-120

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified.

Bernstein: Patent meeting.

Utley: ...all [it?] is is a set-top box doing that same function. It acts as a scan converter so that you can display on a raster display device as a pixel-based image.

Bernstein Armstrong: Okay. I wanted to start out by just making that comment because I think as we go through this, we just need to be sensitive to how it's stated so that in certain areas we make sure that it's stated in the way that Brian just indicated.

Boehm: Let's talk about that a little bit more up front here. Brian, can you give me...when you say a display is displayed as a raster, not pixels, a TV display versus a monitor? Or both?

Utley: Both. They operate at different frequencies, they have different scanned characteristics; but basically, they are quite similar. In fact, the very early monitors were TV screens.

Boehm: The reason we focused on pixels is because we needed to draw a line in the sand where we said something went [eeky].

Utley: The technology is pixel based. There isn't any question about that.

Boehm: He's right. I mean, pixels, schmixels. Is there any other way to draw that line in the sand and just use pixels as one embodiment; and is there a way to define the way you would pre-pack an image when it's going to be displayed on a display in terms of raster? Or anything else that you can think of. What we're doing is pre-packing sufficient information so that no two picture elements, whatever the heck they are, are displaying the same piece of information. Right?

Utley: Right. Of course, the trap is as soon as you get into the digital world, you are basically in a bit image format unless you use a more complex method which basically is you describe...

Boehm: Which is vector based, you mean?

Utley: Which is vector based where you describe line segments as vectors, but that's very, very, very much more complex and it does not lend itself at all to this kind of imagery that we're dealing with here. It just doesn't work.

Boehm: And it wouldn't pixelate, obviously, when you magnify it.

Utley: We'd have other problems.

Boehm: But you'd have other problems, right. But we're not worried about covering vector-based systems in this invention right now.

Bernstein: But should we limit ourselves...but we don't limit ourselves, either, do we?

Boehm: I'm thinking that a court could hold that you are, yeah, because we're talking pixels all over the place. We've defined some of the claims in terms of how to draw that line in the sand in terms of number of pixels versus

what's displayed versus what's pre-packed in; and maybe the whole string of claims wouldn't make sense unless you were talking in terms of pixels or picture elements. Maybe we don't have the word "pixel" in every claim, but my point is that...

Armstrong Bernstein: Is there any way to do it vector based?

Boehm: Yeah, there are generic ways...we'll, I'm not sure you want to do it vector based because now we can't draw the line in the sand.

Bernstein: Okay. I was thinking a separate filing if there was a way.

Boehm: Yeah, but I'm thinking of...you brought up a good point. We're thinking pixels or a digitized image. Technically, a photograph is grains.

Utley: Right.

Boehm: Is there a grain-based quality factor that we can tap onto?

Utley: No, not really. I think the closest...the part of that that [varies] is when you do the enlargement of the source photo image.

Boehm: Maybe we should talk data elements. Is there a...

Bernstein: That's the word I liked versus this...value data, additional data.

Boehm: But this is not...in the product, there is a big difference.

Utley: But because there's a big [batch] of formulas, you can't...<unclear; everyone talking at once.>

Bernstein: I understand that, I understand that.

Armstrong: But we could use data elements with pixels being an exemplary method for using data elements...here's one example of a data element, it's a pixel.

Boehm: The problem with that, though, is somebody could find a piece of Prior Art that uses the data for vector based.

Bernstein: Oh, [then we are beat] on vector base?

Boehm: No, if it's Prior Art...if it's done ten years ago...vector based...and you're saying in your spec that your claim language data elements cover is broad enough to cover pixel, vector based, and everything. Your claim now reads on the Prior Art, and your patent would be invalid. It could be interpreted that way.

Bernstein: Brian, were we ever able to do it vector based?

Utley: Well, there are certain things which you can do vector based.

Bernstein: That you can't do pixel based?

Utley: That you can do pixel based as well as vector based.

Bernstein: So we've got to be careful that they can't cross that same line.

Utley: Certain kind of graphics are done in vector based. For instance, AUTOCAD works on a vector-based system. CAD programs are typically vector based.

Boehm: Does the concept of your invention, of pre-packing the number of picture elements so you can zoom it and pan it, does that have anything to do with vector-based systems?

Armstrong Utley: No.

Utley: I think, Doug, it really doesn't. Vector-based systems don't play here, and I don't think the data elements buy you a thing.

Boehm: I think it could buy you trouble.

Bernstein: Okay.

Boehm: A good point in trying to broaden it, and we'll keep that in mind...

Bernstein: My question is, so does this cover if you could do it on a TV for a set-top box?

Boehm: I thought it did until...

Bernstein: That's what I was after. I didn't know if a pixel was involved in a TV.

Utley: Not in a direct sense.

Bernstein: In the display sense, though?

Utley: No.

Bernstein: Because we make a distinction between...

Armstrong: <Inaudible comment.>

Utley: But I told you that. But you do

Bernstein: Then were covered

Utley: Yeah...everything is carried up to a scan convertor which is simply a translation medium to translate from pixels into a raster.

Bernstein: Gotcha. Okay.

Utley: So you can display all of that on a laptop, and then it's direct mapping, pixel to pixel.

Bernstein: Or you can convert it to whatever you want.

Utley: Right. That's right. You can convert it to a NTSC or [PAL] or C-CAM or...HDTV

Bernstein: Or any display.

Bernstein: What about a game? What about a game are we set up to cover a game.

Utley: Yeah

Armstrong: I think if we look through this, You said that it need's to be...

Utley: Any kind of display device...

Armstrong: In it's invention, it's a calculation based on pixels, and we just need to be careful that the way this is worded doesn't preclude us from displaying it on a non-pixel-based system.

Bernstein: And that's what he just said. He said that...

Armstrong: He said we're converting the wordage here because we ran into it a number of times. As we all look at it together, let's just be cognizant of that.

Boehm: Absolutely. When we go through, we'll all keep an eye out for it. But when you say a non-pixel-based system is a raster system, I really don't agree with that. A raster is derived from the picture elements, right?

Bernstein: From the pixels. That's what Brian just said.

Boehm: Yeah.

Bernstein: So we can convert the pixels to any display medium we want.

Boehm: Yeah, but even if you look at the...when we get to some of the claims, when you look at the resolution of the monitors, they talk about pixels.

Bernstein: Well, that's what I'm concerned about a little bit.

Utley: Because what they're referencing when they talk about pixels on the monitor, they're really referencing the scan buffer that scans it out to the monitor, and it's not a representation inherently within the monitor itself.

Boehm: Oh, okay.

Utley: The monitor has no pixels. But the monitor has a [shatter vast] which, depending on the monitor technology, whether it's a Sony or a non-Sony—a Sony has an aperture grill—but they have a three-color dot matrix which has no direct connection with a bitmap.

Boehm: Oh, really? No association to the pixel elements coming in?

Utley: No, none whatsoever. A standard TV tube...a 17" TV tube has a dot-spacing at a [4.?] [4.?] inches, and a good display tube has got a lot of the diodes at .26, .27, .28 at the higher resolution, but it's where it's visually higher resolution, not necessarily what your scan buffer has.

Boehm: You don't turn the screen...the gun on and off for each pixel.

Utley: Right. It's a continuous beam scan, and you're modulating the beam.

Boehm: So I think the best we can do is keep that in mind when we talk about the language to converting this over to television display stuff[].

Utley: Yeah, on this page I did have an additional comment. On line 18 and 19, where it talks about ideal image quality requiring a minimum bandwidth for transmission. All I was saying here is instead of a limited bandwidth, it works regardless of the bandwidth, but it has less demand on bandwidth.

Boehm: Okay.

Bernstein: Let me ask you this. Let's say [Take bandwidth out of the equation and just say you play our image off your hard drive. It's still cool, so it has all the features we're patenting. Why do I even care about a limited bandwidth? Why do I care that that statement be there at all?

Boehm: Do you have any knowledge...I mean, ...

Bernstein: No, I have no knowledge that in Prior Art you can pull off your hard drive any differently. People did not say to me, "oh, what you did is cool because you can play it over a network." They said, "it's cool, so I'm gonna play it off my hard drive." And by the way, in the end, the file is on your hard drive. Even if you had a 2400-baud modem, the only difference is you have to wait 11 minutes to get the cool image. The coolness did not decrease by the time it took to download the image.

Boehm: Okay, again, we'll keep that in mind. I believe it's covered when we claim the digital image file because I don't think the digital image file claims pertain to a network. Let me...

Bernstein: None of it should pertain to a network really. It's an added benefit that we're able to transmit these rich pictures over a limited bandwidth network, but it is nothing even close to dependent or part of the coolness of the invention.

Boehm: Can I take a counter-position, Eliot?

Bernstein: Sure.

Boehm: The reason that you'd want...first of all, you have to describe the best mode of your invention. There's no question we have to leave network in there.

Bernstein: That's fine. Okay.

Boehm: And the more stuff you leave in there, the better it is for us.

Bernstein: As long as we're not limited to it.

Boehm: The claims are what defines what's limited, but again, if we are so broad brush in...the claims are interpreted in the language in this...

Bernstein: Well, don't be broad here. If you want to be broad, it can be your hard drive or it could be over a network, it doesn't matter.

Boehm: Right. The problem would be if the digital file that we're claiming in some claim #29 or whatever, if the wording of that claim says "uploading"...no, it says "transferring data," and that would mean over an Internet, and in the spec we come back and say that means over the Internet or...

Bernstein: ..or your hard drive, yes, I agree. That's why I put in some places upload, download. I don't care what you call it, don't limit as to download what I see in some places.

Boehm: Okay, that patent issue is three years down the road you sue your closest competitor. They had a guy that just came out of the print industry, and they have been downloading images in print off of hard drives for photo-processing applications for the past twenty years. He comes out with one article. Your claim directly reads on it because it's off the hard drive now because you have interpreted that claim to mean off a network. Your claim is dead.

Bernstein: No, but that's not...

Boehm: Then you run to claim two, which is dependent on one, which is going to say, by the way, it's over a network.

Bernstein: But it doesn't have to be.

Boehm: Claim two will have to say that, yeah, because otherwise your patent will fall, Eliot.

Bernstein: Why?

Boehm: What?

Bernstein: What my question is...

Boehm: Why will it fall?

Bernstein: Let's stick to the invention.

Utley: What he's saying is...let me see if I can...claim one is as broad as possible. Now, if something happens to lay[] on claim one in the Prior Art, you bypass that by going to claim two, which reads on claim one, which further defines claim one, which takes you out of the concept situation and into [cleaner].

Boehm: Right. You've narrowed the scope of your part of this technology world—the part that's protected—but you want to make sure that part is over what your business is.

Bernstein: Well, my business is...you see, my business doesn't need to involve a network. I could send somebody a CD of their hotel properties, like Hyatt, and say, "Here, you still have all the cool effects of my digital imaging products..."

Utley: But claim one doesn't say anything about networks.

Bernstein: Okay. That's all I'm saying, Brian. As long as you're not limiting me to a network.

Utley: Claim one doesn't. We used that deliberately.

Bernstein: Okay.

Utley: I'm going to talk about that again when we get to the claims.

Boehm: Let's talk about that when we get there, but again, my point is is you've got to be careful about what you say in the spec because the way claims are

interpreted is by referring to the spec. When you say "providing a digital image file," that doesn't mean much in the claim. The guy's going to go read the spec, see how you did it, look at your figures, and that's how this language is going to be interpreted. There's no broad brush back there. And you say, "oh, well it means everything," now claim one means everything, it reads on all the old prior art.

Bernstein: But it does, Doug, mean the hard drive, the CD...

Armstrong: Let me suggest something else. Let me suggest that what we're really saying, whether it's over a network or off the hard drive, is that the unique nature of our process results in high-quality images at low-file size, and so whether that low-file size...

Utley: <Inaudible comment.>

Boehm: Well, it's not file size.

Armstrong: Right. It could be huge files.

Bernstein: It could be huge files...

Armstrong: Hold on. Isn't it true that it is a low-file size given the amount of information that you're able to draw from it?

Bernstein: No, it's the large-file size. It's the opposite. You gave them more data. The file size is not relevant, nor is the bandwidth. That is a must-understand. This idea is cool whether it's played off your hard drive, played off the CD, played off the tape back-up, whatever you want to call it, over a network...whether you Fed-ex, this, Doug, because its the same effect whether you send it over the Internet, and that effect is the same as if it is a 2400-baud modem receiving it or a super-high-speed, as if the only difference between Fed-ex and the Pony Express is three days' wait, but you still are going to have this same package.

Utley: Right. But what you want to do in your claim is make sure that you're not...

Bernstein: Limited.

Utley: No, make sure that you haven't stated your claim so broadly that what is over here excludes your ability to claim over here. So you parse the claims, one very broadly, and then you keep narrowing it down so that if something happened over here, you've got...the network delivers it to you.

Bernstein: Okay. And if you're saying that limited bandwidth isn't in claim one, then we don't care.

Utley: Right.

Bernstein: But I just wonder why it needs to be here other than to describe what we did. You don't, by the way, need a network to describe what we did.

Utley: So we can strike network. We don't have to.

Boehm: Well, we're not striking it. We can take it from the claims when we get there, but I've got to leave it in as your preferred embodiment. That's important.

Utley: Right. We're on page one.

Bernstein: Why? Let me ask you why.

Boehm: Okay, there's something called the best mode...

Bernstein: Okay, let me explain that to you because I do understand that. The best mode of this invention stops as soon as you have the image, whether you ever sent it or not, or played it on your computer for that matter.

Boehm: Okay, Eliot, I don't think you would want to stick to that statement. You're saying right now that your invention is so bloody broad that if somebody had done this before on CDs but never done it on the Internet, and we can go sue them because they're now doing it on the Internet and your claim is valid, and when you interpret your claim to read "on the Internet," and

that's all you ever care about, but now we're going to get you up on the...

Bernstein: That's not all I ever care about.

Boehm: You care about stopping your competitors.

Bernstein: No, but I care about putting it on CDs and all those kind of things or using it for any other application. That's the key here, Doug...the file creation--the concept, the invention--stops before it ever hits the network.

Armstrong: What Eliot's really saying is that our invention does not include a delivery system.

Boehm: Right. So in one embodiment, it would. If you wanted to put a picture claim on your business, it's going to be one of our claims that includes a network, that includes pixels, that includes...I want a pixel claim...

Bernstein: That can include.

Boehm: Pardon?

Bernstein: That can include as one of the methods of delivery, but the delivery method could be a network, a hard drive, a CD-ROM, etc. As long as you cover all that, I'm fine.

Boehm: Okay, what I think we're arguing about is the mine field. You want a claim that's broad enough that if it gets blown away, okay it gets blown away; but I want a claim that's narrow enough that there's a less chance of it being blown away by Prior Art sneaking out of the woodwork because we're not experts in this field like Chris Taylor or something that could say, "Oh, you can't do that...here's a reference." That's why I'm a little...

Bernstein: Can't we say that that's an added benefit of what we've done? I mean, I don't want to be confined to a network, that's for certain.

Utley: You're not.

Boehm: Okay. In one claim, you're not; in another claim, I want you to be.

Bernstein: Okay, that's great. That's what I'm saying. AS long as you've got me covered on CDs or DVDs--somewhere in the future--that's fine.

Boehm: Okay.

Bernstein: Um, page 1.

Utley: In fact...I just want to cap this conversation. When you go through the methodology of the creation of the image and the display of the image and the formulas, there's nothing about a network.

Bernstein: Nothing.

Utley: Okay. So all of that gives you total freedom to claim wherever you want to place that...whatever environment you want to place that. I did have a thought, Doug, on the display and a way to kind of be a little bit more embracing.

Boehm: Than pixel based you mean?

Utley: Yeah, instead of saying display monitor, we just say display system, and display system can be defined as anything with a visual user interface, be it a TV or...

Boehm: That sounds...where is that?

Utley: Page 2, line 6, is the first one. It says "display monitor." If we just say "display system" wherever we have "display monitor"...

Boehm: Okay, not everywhere. This is the background. We're not really talking about our invention yet. The first time we talk about display is describing figure

1, which is element 3, is the display, so that's where we'll stick in it's the display...just the word "display."

Utley: Okay.

Bernstein: Yeah, system. Right.

Boehm: So, let's hold that in abeyance.

Bernstein: I had a comment on line 15: "Improved resolution for zooming and/or panning within a single image."

Boehm: This is the field of the invention. That's fine if you want to say that. All this paragraph does is points the examiner in the right art for the search.

Bernstein: Okay, and I would just clarify, too, on that, it's a single image, not a bunch image—the zooming and everything. This is one file that has all these attributes.

Boehm: Right. So it's "and..."

Bernstein: It can be additional files added into it, but those files retain the single image.

Utley: As long as it's understood that a single image embraces fixed images.

Boehm: How about a single window?

Bernstein: How about a single file?

Armstrong: That's probably good.

Bernstein: That's the right terminology.

Armstrong: Line 22 seems to me to be an incomplete sentence.

Utley: It is.

Armstrong: It should say, "It is known that one can view a digital image on a display."

Utley: That's what we talked about yesterday, Doug.

Boehm: Yeah.

Utley: And you had terminology for that.

Boehm: Yeah, let me find that. I know I do, but apparently it's not that handy where did it go. Yeah, here. We're talking about in the Prior Art it is known.

Utley: Right.

Boehm: And that's the concept. I can fix that sentence by saying...

Bernstein: That "one can" instead of "two."

Boehm: <Speaking as he writes.> "It is known that one can view a digital image on the display screen..."

Bernstein: In other words, it is known in Prior Art or whatever.

Boehm: How about "It is previously known that..."?

Bernstein: Yeah.

Boehm: Okay. "It is known."

Armstrong: "It is known." Period. Previously or now. "It is known that one can view..."

Boehm: "...one can view a digital image..." and get rid of two..."and zoom and pan within that image." Right?

Utley: Uh, huh.

Boehm: Boy, at this rate this is going to be a long conversation.

Bernstein: Yeah, it is because we go now to the next page, too, thank God, and where it's circled pixels, let's just be clear.

Boehm: I'm sorry, I've got to back up. "The limited bandwidth network," how are we changing that?

Utley: We're going to remove that.

Boehm: We're going to get rid of what?

Bernstein: Well, you don't need it.

Armstrong: Delivered through its display system. "The viewer desires ideal image quality delivered to his display system."

Boehm: Okay.

Utley: And then you can go on. "In a network environment..."

Bernstein: This is even more...

Utley: Right. And then you say, "In the network environment, it's important to transfer an [idea or image] in a reasonable amount of time."

Bernstein: There you go. That covers everything. Okay, so we go to pixels and pixelization terms, and my question is, and Brian will help me here, when you're looking at the screen and you zoom, are you seeing pixels?

Utley: You are seeing pixels.

Bernstein: But the screen has no pixels.

Utley: No, but pixels are mapped into a raster-based generation; but yes, there are pixels.

Bernstein: Okay.

Utley: You see pixels.

Bernstein: Okay. You do?

Bernstein: Yes. There's no pixels but yet you see them?

Utley: It's not a pixel-based medium, but the raster presents pixels.

Bernstein: And it presents them distorted?

Utley: It will present them distorted.

Bernstein: Once you magnify them?

Bernstein: Okay.

Utley: It may take more than one raster to represent a pixel. In other words, a pixel is a composite. If it's a very large pixel, it'll take several raster scans to create a pixel.

Bernstein: But you will still see...

Utley: To see a pixel.

Bernstein: And then when you blow it up, you'll still see a distorted...

Utley: Right.

Bernstein: Okay.

Armstrong: This is the first opportunity where if we wanted to, we could say, in line 3,
 "...in which the pixels comma (data elements) comprising the image"...

Bernstein: We can't.

Utley: We don't want data elements, we don't want data elements.

Bernstein: Because do you see what's happening? You still are drawing off a pixel base.

Boehm: Pixel, and then this is goofy because in the next paragraph, we define what a
 pixel is. We're defining pixelation first, and then next we're defining
 pixel. Why don't we not define pixel up above...oh, yeah, I have to. "In
 which the pixels, i.e. picture elements..." How's that?

Bernstein: Yeah.

Boehm: In other words, everybody knows what a pixel is, but we're just throwing it...

Utley: It's a picture element.

Bernstein: Okay, that's fine.

Boehm: "Pixels, i.e., picture elements."

Bernstein: Right. That might even cover us in other space that we don't even know yet. Okay.
 Go to page 3...

Utley: On line 6, this is an opportunity to introduce the notion of a display system
 instead of a display monitor.

Boehm: It is...

Utley: Is that a problem to you?

Boehm: It depends on where we have to go with it, Brian. Where do you see us going? Do we
 need the differences defined later?

Bernstein: You could be very accurate here, Doug, because when this was invented, I ran my
 computer slash my TV at times. So it was through both displays. Remember,
 Brian? I brought you over. So I've always been running through a scan
 converter, my TV.

Boehm: So where do you want to go with this, Brian?

Utley: I just want to say "display system," and the reason I say that is because if you
 say display system, you integrate into the description the scan converter.
 If you say "display monitor" itself, a display monitor does not contain
 the scan converter. That's generally housed outside in a set-top box or in
 the computer hardware itself.

Boehm: Okay, I agree with you that you want to make that distinction; but do we want to
 make that distinction? We're still in the [background]. We're describing
 somebody else's, not ours yet.

Utley: Yeah, you tell us where you think the best place is to put it, Doug.

Boehm: Well, I definitely want to put it when we first represent what display 30 is.

Utley: Okay.

Boehm: What I don't know if...

Bernstein: Okay. By the way, here it's true, too, [what he says]. Brian's saying...

Boehm: It really is.

Bernstein: Yeah. In Prior Art, if you play that on your TV, it's still pixelated. It didn't
 matter if it's a monitor or TV. So Prior Art, no matter how you played it,
 did that, and that's good to say.

Boehm: In the background here, it's not important. What we do in the background is try and set up that the strawman of the Prior Art had these problems, and then you knock them down with your invention. So whether you set him up with the display or display system and you knock him down, he'll fall just as hard. I don't think that's going to make a big.

Utley: That's not a big deal here.

Bernstein: But it has to come somewhere in here.

Boehm: What if we're making some stupid statement here. Let me read those paragraphs to you real slow here, and then let's make a call on it because; or if this is a good opportunity where we have to figure out the difference between a raster and pixel-based system or scanning lines or anything, if we have to make that...if we have to educate the people in order to interpret the claims later, then now is as good a time to educate them as far as what's the background. I don't think we need to do that.

Armstrong: I personally feel that if we're going to be later using display system to define more broadly how we display things, we might as well refer to Prior Art in the same way since it does include it.

Bernstein: It doesn't hurt. It can't hurt because all it's saying is that Prior Art, no matter what system you played on. Here what you're saying is Prior Art, when you play it on a monitor.

Boehm: I guess just from experience, there's really no right or wrong answer on this, guys; but just from experience, I would tend to disagree with you. Whenever I define a term that I care about, I always define it in the spec, especially if it's not a normal, common, everyday-type term that you want to talk about in the background because when you're saying that it's the same in the Prior Art as it is in your invention, you say that today and you may want to argue that today, but maybe you want to change your mind tomorrow; and when the litigators litigate this, they're going to wish like hell you never said that it was the same in the Prior Art.

Bernstein: Okay.

Boehm: You can point to your spec and say, "voila!"...

Bernstein: And say we were working on our TV...

Boehm: ...our display system, and it's defined as such.

Bernstein: That's fair.

Boehm: And you can't go back to the Prior Art to define it.

Bernstein: Okay.

Boehm: So there's legal ways of doing it.

Bernstein: Okay, so let's see where we insert that correctly.

Boehm: Yeah, I think it'll be later when we're talking about element 30 when he defines the blocks of the system. Let's see...

Utley: On line 14, where you say "represented as a triple..."

Boehm: Yeah?

Utley: I think the correct word is "triplet."

Boehm: Okay, Steve pulled this from something on the Internet, so if you say "triplet," that is right, yeah. Triplet. Good catch. It took five of us to catch that! <Reading out loud to himself...> Here's the bandwidth.

Bernstein: Yeah, "...thereby speeding the transmission." Now that is true, but it's not necessary.

Boehm: "...decrease the file size..." No, he's got it right here, right?

Bernstein: Well, "...this results in a small source image file size," period.

Boehm: No. The whole sentence says "plus the teaching in the art..."

Bernstein: Okay, okay, yeah. That's right.

Boehm: No background. We're still setting up the strawman to knock him down.

Bernstein: Gotcha, but we don't need a network or Internet.

Utley: We're not talking about us—we're talking about the other guys.

Boehm: Yeah, Prior Art, and they were compressing the hell out of it and moving information because they knew they had to go through this limited...

Bernstein: No, but let me ask you this. Let's say you just set it up on your computer—you never put it on a network, I'll just give you the same argument—you wanted to display your family photos on your own display system. You built a frame, you put a picture, matched the size to the frame; and voila! It's on your system, you can't do anything with it. You can't zoom. You haven't communicated it over a network; you haven't sent it to anybody...but you still can't zoom on it.

Boehm: But you still can zoom and pan, you mean?

Bernstein: You still can't.

Boehm: Oh, you still cannot?

Bernstein: No, because you built the frame wrong.

Boehm: Oh! Okay, okay.

Bernstein: So I mean you built the image to target wrong.

Boehm: Oh, I see what you're saying.

Bernstein: Yeah. So it didn't matter if you transmitted over any network.

Boehm: Now this will get really hairy...how did you build it wrong?

Bernstein: Well, because you only gave the frame the appropriate size as was necessary to fill the frame.

Utley: You designed the frame to the image.

Boehm: Yeah, so it doesn't magnify at all?

Utley: Right.

Bernstein: Right, whether you had a network involved or not.

Boehm: Okay, and if it's a little bit bigger than the frame, you can still pan but not magnify—but not zoom.

Bernstein: Right, but the teaching in the Prior Art would be to match the frame to the image.

Boehm: Okay.

Bernstein: That's how the world's been working for a long time.

Boehm: I totally agree. Maybe we should throw that...does that say that here?

Bernstein: Well, I guess there are a lot of places where we're going to add it.

Boehm: Well, that's a great line what you just said..."match the frame to the image."

Bernstein: You see, that's going to become critical when you say that "two times magnification at least" because the truth is nobody built a picture

saying, "I'm going to give it a little more edge so I get a little more zoom." That's the difference. You built the picture...you had a frame size...you popped in their image to be that frame size...you created the image for that size. You didn't say, "I'm going to give them an extra pixel so they can zoom a little," or an extra pixel or two, or two times. So one drop, one pixel more than is required, is the new out.

Utley: Well, the only thing we have to be careful about is that there are applications that allow you to create an image which is larger than your viewing window and operate on an image which is larger than your viewing window. What's different is that that image, when you see it in the viewing window, what you're looking at is the image as it is intended, you're not looking at a compressed form of the image--by compressed, I mean a scaled form of the image--so that...

Boehm: Or it sits in the frame.

Utley: Right. So it's not sized to the window, it's sized to the system frame, whatever the application is, but it doesn't allow you to zoom into the image which will allow you to avoid pixelation.

Boehm: Right, and I [] when we had Chris Taylor say he had done years ago on his website...you can look at his website, by the way--msoe.edu--and Dr. Chris Taylor has his own link to his own personal web page, and he...

Bernstein: Where is it?

Armstrong: msoe.edu.

Boehm: msoe.edu, and Dr. Chris Taylor is his name, and it'll have a subdirectory for him. Then on his subdirectory, it'll say, "Go see images from my own website," and then he has his own personal thing; and in that, he has pictures of stuff. And he says those pictures, which were done way before you guys--when he first got here to Milwaukee, I guess is what he said--but he said that there are more pixels there than are needed, and that's just the way it just happened to come out. There was no intent to do it one way or the other way--he didn't intentionally match the frame size to the image--that's what happened when he did it. But he's not providing scanning and zooming, and...

Bernstein: Well, that's the difference.

Boehm: And, but he is not providing more than two times the pixels.

Bernstein: Well, that doesn't matter [] because really we're just saying that our art is based on the fact that we're providing extra data that allows, whether it's one pixel or not. One pixel might give you a zoom factor of .00004...

Boehm: I see what you're saying...

Bernstein: So why should be ever limit...the object of the invention is to create zoom by giving more data.

Boehm: Right. Can you zoom, Brian, without going twice the number of pixels?

Utley: Sure. Well, you can zoom to...what you're saying is you have a target image which is 2x the window, or 2x the viewing image, and, yes, it can be anything over and above the size of the viewing image. It's just a practical question of does it have any value...

Boehm: Right.

Utley: ...when they have such a limited...

Boehm: Magnification factor.

Bernstein: But we don't know into the future if it will. Somebody could get around us by getting it somehow under a 2, or, as a matter of fact, what if you only need 1.5? Why should we limit ourselves because that's not what was created?

Boehm: Okay.

Bernstein: You know what I mean? We didn't pencil it out and say two times is what we need to do this.

Boehm: That's a good...we got that...Steve and I must have come up with that two times.

Bernstein: We all came up with it just because the first button on your magnifying glass is two times.

Boehm: Okay.

Bernstein: And we were thinking...here was our thinking...that you were able to click that button on a regular image, and you were still okay—a little fuzzy—but you hadn't blown apart. So we were thinking anything beyond that. But actually as I re-thought that, I said that's not the issue here. If you're designing screen size to match frame size, it doesn't matter if you give it one drop more. That adds to the zoom capability by some factor...that extra data. But one and half times. What if you only wanted...what if your client says "I've got a picture of my wife, and she's ugly, so I only want a one and a half times magnification on her face."

Utley: Okay, we all agree.

Armstrong: Anything more than one times is the definition.

Boehm: And I think he's got it in claim 1. He scratched out "at least twice" and put in "is greater than."

Bernstein: Right.

Utley: So the right way to say that is that the target image is larger than the viewing image, and you've said it.

Boehm: But just claiming that concept.

Bernstein: Right.

Boehm: No...and providing zooming capability?

Bernstein: Absolutely.

Boehm: Right.

Utley: Which is the way you have it worded in claim 1.

Bernstein: I don't care if you built the picture and your frame size was "x", but that wouldn't achieve anything that we thought was cool. That would just mean you have an oversize picture in a frame and you could move around by grabbing the picture. By the way, that brings me to what made us start thinking about this was your Adobe example. You are grabbing a larger image, but you're moving it around kind of clumsily and it's not achieving what we achieve. Do you follow? Because you're just grabbing and kind of moving. As a matter of fact, there's a technology that's out...

Boehm: Yeah, but you can zoom, zoom, zoom in there.

Bernstein: Yes, straight in, and then you've got to grab it.

Boehm: Yes.

Bernstein: And move the larger image from that portion around. There's a technology called [Zif X] out today that allows for something similar to that, but yet it's very annoying that once you're in, you're in and have to grab and move around. It's a much different effect and feel than what you get when you look at our images and grab and move around. You know what I mean? In our image, the whole thing is there pretty much.

Armstrong: And this is a distinction that we begin to make on page three where the ability...our art allows you to, on a single image, once that image is

received by the system or displayed on the display system, it is complete. You're able to zoom in and pan around on it, and there isn't a requirement for the system to re-draw the image or any section of the image.

Utley: No, no, no, you can't say that.

Armstrong: Why? Let me first say what I'm saying, then we'll take out the parts that are wrong. Then the difference between some of our competitors is that they require if you are to zoom into an image and look at that zoomed portion of the picture and then pan at that zoom level to another section of that image, that image needs to re-draw the new information in order for you to see it.

Utley: And that's the trap because. In fact, the display system only buffers what is on the screen; and when you pan, you refresh the display buffer.

Armstrong: Even in ours?

Utley: Yes. You have no control over that.

Armstrong: But you have to because that's how you get a new image.

Utley: That's just the way the system works.

Armstrong: Right, right. You can't really do without what you're seeing on the screen. You've got to redraw.

Armstrong: Well, maybe this is the distinction for..

Boehm: But you're not grabbing a new file...you're not grabbing more files.

Armstrong: Right, and that's what I was about to say. The distinction perhaps is for the delivery over a network, and that when it is delivered over a network, they require the transmission of additional data, whereas our data has already been received in its totality.

Boehm: Well, that's the exact thing that the Yahoo! Map will do, right? You want to zoom into a map...

Armstrong: Precisely.

Boehm: ...it grabs a new image, and there is the network. But what Eliot was saying earlier was well why not make the network the link to your hard drive.

Bernstein: Right, it is.

Boehm: So then do you have to go get more information off the hard drive? That's the question.

Bernstein: Yeah.

Utley: No, be careful because in this day and age of virtual memory systems, there's a big grey area between the RAM and hard drive. The system may put part of that image on the hard drive.

Bernstein: It might put part in RAM; it might put half of it in the network.

Utley: That system can reside in several different places, and you don't know it. The system is managing the resources.

Boehm: I agree. So we have to figure out how to define in broader terms, just put it in memory or, I don't know, put it in sourced image storage. In other words, if a file comes over and gets lumped in Memory Means A, then it gets displayed to the display using however you want to do it, the question is, when you're zooming, do you have to go back to Memory Means A, whether that Memory Means A is across a network or on your hard drive or in a different PIM.

Bernstein: Or B, that's right. And that's a big difference, Brian.

Boehm: Because now you're getting real technical, and I don't know that you're not doing that.

Utley: The problem is that as you try to increase the precision of what you're saying, you have to be very careful.

Bernstein: Well, then we've got to take back "...one drawback of this type of system is that each zoom or pan operation requires the downloading..."—downloading is definitely the wrong word—"...of additional data over the network..."

Armstrong: Line 8?
Bernstein: Yeah. That's all wrong.

Boehm: What page are we on?

Bernstein: We're on page 3, line 8: "One drawback of this type of system is that each zoom or pan operation requires the downloading of additional data over the network connection." Well, that's not exactly what we're...

Utley: We're talking about the art...the state-of-the-art now. We're not talking about...

Bernstein: Or mapping the travel?

Utley: We're not talking about our system.

Bernstein: Okay. Then that's fine.

Boehm: That's exactly what the advantage of this system is, isn't it?

Utley: Yeah, exactly. It's not designed to work that way. It's designed to be an integral component of the displaying system.

Boehm: And also we're talking about the Yahoo! Map.

Bernstein: Once again, however, it's not limited...Let me ask you this question because I don't see networks at all, right? Let's just look at the Yahoo! Map program.

Armstrong: I've got it on CD ROM.

Bernstein: No, no, that's okay. I know what we're doing. When you move, whether you move on a network or off the network, it grabs that image, and it's different than what we look like. There's a definite difference of how those two things work. Do you follow me, Doug? So it doesn't matter whether it's on your hard drive drawing the data, over a network drawing the data, what matters is that you perceive a difference between the way that the Yahoo! Map goes and grabs another closer section of the map and you're stuck there. Now you can't move back without going backwards to that other image or to the left to that other image or to the right to that other image. All these things are broken down into "other image" basically.

Boehm: Right, you're getting another what you called the hotspot. These are all hotspots.

Bernstein: Right. Which is that technically a new file?

Boehm: That's a new file.

Bernstein: Then maybe that's our differentiation.

Utley: We have to be careful.

Bernstein: Well, we don't go from another file.

Utley: No, but they're going to go...

Bernstein: They may say that's all in one file. Right.

Utley: So that would be...

Boehm: I think that they are going for another file because whenever you click on another map...

Bernstein: So Brian's right. So what? Even if they were and there were 8 million files, we could combine it into one and call it one. But then if you just made what we do...

Utley: You really have to be very careful because you don't know how they organized and structured that whole mapping system.

Bernstein: You know what you do, Doug? You describe the optic. You say this is what you see with their system, and this is what you see with ours.

Boehm: That's what we're trying to do here.

Bernstein: And let's not let that get too complicated. Let's what we're trying to get explained out over time.

Boehm: You can't.

Bernstein: If somebody wants....

Boehm: That's the key. That's what our frustration is as patent attorneys. We have to define your invention in the legal technical words. You can't wave your hands at it. If you do, you won't get a clean street of passage.

Bernstein: You can't say it looks prettier?

Boehm: It won't be upheld in court.

Bernstein: You can't say it looks prettier, huh?

Boehm: No, you can't. And that's what I'm saying. I agree with you...I'd love to say, "When it looks like idea technology..."

Bernstein: Well, explain to me what's happening in my brain, then, on an electrical signal impulse, because there's a definite perception definite between what I see, why I see it differently, and how it relates to what I do, which gives you a completely different spatial representation within an image because of the way that I'm manipulating data. See, I always looked at our technology--and maybe this stupidity might define something here--I always looked that when you take that big image of ours versus one technology where you could...let's say we both have big pictures, okay? Let's just say we both go with the big picture in a small viewing frame. One says you can move the frame or the picture and get a new image of that image, or you can go deeper on it by drawing another whole separate image, okay? Mine, I always looked at it is that it puts the frame in the center; and as you hit zoom, you're sucking in data towards you that's coming from the outside peripheral, not in separate little chunks and new images, but as one image, and it's pulling it into like a vortex, so to speak, and giving you that new data to let you zoom or move. Follow me?

Armstrong: Let me ask a clarifying question of Brian. When we transmit a file to a user, he gets the entire file into a .TMP file?

Bernstein: No, it's just hard drive.

Armstrong: Right onto a hard drive. Now, as he manipulates the image on his screen...as I zoom to level one and then to level two or level three, or I pan within it, what sort of access to that file is made inside the computer, let's say?

Utley: It varies.

Armstrong: Okay, but there is regular access back and forth to data points within the file?

Utley: Yeah. Part of the picture may be residing on the file; part of it may be in active RAM.

Bernstein: Doug?

Boehm: Um, hum?

<Utley and Armstrong continue their conversation in the background as Bernstein continues with Boehm.>

Bernstein: Let me ask you to try and help me define something. Take a frame...take a small piece of paper and make a frame, okay? You ready? You got a square piece of paper?

Boehm: You want me to cut it? Yeah, I've got a sticky yellow pad here.

Bernstein: Perfect. Use that on top of your patent application and put it in the center. In my thinking where I don't understand that, when we do the Prior Art, when we take that frame and we want to see the upper-left corner--now remember, our piece of sticky is in the center--we now want to go to the upper-left corner, we've got to move the frame over the upper-left corner and now we're seeing that part of the paper.

Boehm: Which means you're moving the viewing window over a huge image.

Bernstein: Right. Or, you're moving the image to fit in the frame.

Boehm: Right.

Bernstein: Okay. Now with mine, put that viewing window in the center again; and let's say you want to zoom in or go to the...zoom in, what you're really doing is sucking in this data, aren't you? You'd be almost pulling through the paper through that frame. That's why you have that attached.

Boehm: No, what you're doing is you're scaling the...

Utley: You're scaling the total image.

Boehm: Yeah, the total image specifically or to fit a reduced frame.

Utley: But they're leaving the image as it is.

Bernstein: Ah, then there is a defining difference.

Utley: I know, that's why you call it zooming. That's why the invention is described the way it is. That's why when I do all the pictures and show all those relationships, that's why it's designed...it's laid out that way.

Boehm: Can we define our zooming in...

Utley: In fact, there's a scaling...

Boehm: ...as a scaling mechanism?

Utley: ...viewing window.

Bernstein: That's the question...can you...

Boehm: Can we define our zooming as the scaling of the image to a different window, which is the normal way, I think, of zooming and scaling. I don't think of...

Utley: The effect of zooming is to rescale the target image into the viewing window, or some portion of the target image. What you're doing when you zoom in, you're now scaling the complete target image to a portion of the target image, and then what you're able to do is take that scaled portion and move it around to the entire image, but it's at its given scale level. You don't have to re-compute the for every portion of the image.

Boehm: Right. I think we're fine with what we're doing. I just think we've got to...there's this topic 14, to be cognizant of as we go through this, to make sure that we distinguish our zooming from hotspot zooming by zooming by grabbing another file.

Bernstein: Right.

Boehm: Our zooming is scaling.

Bernstein: It's also by grabbing another file because it would be our view that that set of hotspots could be combined into a single file, and it definitely could be designed that way. I mean, I could write the file to be that.

Utley: But it would be another file?

Bernstein: No. I could take all five hotspots and write them into one file.

Utley: So the [] will be in one file?

Bernstein: Right. Exactly.

Bernstein: So you've got to be very careful here of what the difference is. It's such a minute, yet it's such a profound difference what we do...

Utley: But it is another image.

Bernstein: It is another...right. Not another file. That's the difference, right.

Boehm: It's another image?

Utley: Yes.

Bernstein: Of course. A hotspot would be second shot of that image at a closer scale...at a closer view...but it could be combined in one file in the end, even though it's two separate images. And the hotspot could drive right through it in that single file source.

Boehm: I'm thinking that if the mechanism for our zoom is to do the scaling kind of on the fly as you're walking around, we never go grab for another file...

Bernstein: Or we never...

Boehm: Hotspot or not—I don't know how many you put in there—you see, what I'm worried about is, guys, don't you have hotspotting on your website?

Utley: No, here's what...

Boehm: Yeah, we've had them.

Boehm: You've had them, right.

Bernstein: Yeah.

Boehm: And that concept of zooming is grabbing another image file.

Bernstein: Well, but it has the same attributes as our current file, so it's just grabbing another enhanced digital image.

Utley: It's grabbing another image, and you don't have to define it as a separate file. Just grabbing another image. Let me tell you what I think differentiates between one of these systems and what we have. We have, if you think of the target image as the user interface, we have an encapsulated image. It is an encapsulated image that is [] into a file that is transported as a an encapsulated object, and it is manipulated as an object, and you zoom into that object. It is an object whereas in a mapping system, your object is really the whole map system, whatever that is, and...

Boehm: It's the system application for that.

Utley: Right. What happens with the mapping system is the application will create mapped objects according to what you...

<End Side 1, Tape 1; begin Side 2, Tape 1.>

Utley: ...which are then handled individually as you need them or as you request them. What we're talking about is an encapsulated image which has all these attributes contained within that encapsulation.

Boehm: And that would be true whether or not it's on a hard drive?

Utley: Right.

Boehm: I guess that's right...yeah.

Bernstein: And then, so we are striking downloading and additional data over the network connection.

Utley: Prior Art doesn't need that either.

Bernstein: Prior Art doesn't need that. To do Yahoo!'s Map, you don't need a network and you don't need more data over that network. You see, you'd never beat this argument. A network is just a hard drive because really in the end all you've done is like added a cable to your hard drive, and all you're talking about is the length of that cable, really. So networks are not applicable really to what we do. They are an added-value benefit that we can get through that cable quicker or whatever, but they are not the key. The network could be considered the cable between your hard drive and the display. You know what I mean, Brian? We don't need any...

Utley: No, but what you want to do is you want to make sure that you specifically address a network environment.

Bernstein: I wholly agree.

Utley: In addition. You absolutely want to make sure that the...

Bernstein: That's huge, as an additional wire, meaning it's got different...

Utley: Then that's the way to approach it.

Bernstein: Okay. You follow that, Doug?

Boehm: No. Slow it down.

Bernstein: Okay, it's all based on this. You can do our invention off a hard drive, and it's still cool. The fact that you can transmit it over a fat pipe or a small pipe or FedEx it has no bearing. It does what Brian says: it is more valuable in a network environment because it now has the attributes to give greater, richer data that you didn't think was possible in the shorter time. In the end, you see the network and the limited bandwidth, that never mattered because no matter, let's say your pipe was a toothpick, it would get there by tomorrow. Let's say your pipe is a direct line to the hard drive that's able to suck it up at 10,000 RPM or whatever...what's the term?

Boehm: RPM, yeah.

Bernstein: What's the term? Not RPM.

Boehm: Bits per second or...

Utley: BPMs.

Bernstein: Is that what you talk about a hard drive?

Utley: Well, RPMs.

Bernstein: Is it?

Utley: Well, yeah. Technically.

Boehm: The data transfer rate...

Bernstein: Yeah, I'm talking about how fast you can access your hard drive as a number that you buy hard drives based on 7200...

Utley: Oh, no, you buy millisecond access time.

Bernstein: Okay. So we're now 20 years into the future, and Brian invented a pipe that can suck down that speed he just said—hard drive speed. Well, there's no difference now, is there?

Boehm: Sell me on the concept that there's no difference between one hard drive and a network, and you're going to put the whole network industry out of business if you go there.

Bernstein: No, no, because it's a cabling system.

Boehm: I know, but...

Bernstein: It's just an accessed tour drive.

Boehm: And I think your point, and I think we've been there, that we're going to try and claim the broadest embodiment of your invention to be independent of any network or any hard drive or any...

Bernstein: And Prior Art also doesn't need any downloads or any networks. Prior Art, you can do Yahoo! zoom and pan, and Jim Armstrong just said it a minute ago, "I have it on my hard drive." And the program still operates by moving and grabbing this additional data. It has no network attached to it. He's doing it off his hard drive on a CD.

Utley: I thought we already covered that.

Bernstein: Well, I'm just saying one drawback of this type of system is that...and what it should say, if you want, is one drawback of this type of system in a network environment...

Boehm: I'd be happy to say that, but that says that over the network connection. The whole paragraph is to describe another example of prior systems.

Bernstein: But those prior systems don't require networks.

Armstrong: Let me suggest that...

Utley: Wait a minute, wait a minute. Come on. The first sentence says, "...over websites."

Bernstein: But all I'm saying is it doesn't have to.

Utley: Well, it's describing Prior Art, and this particular example is over Web sites.

Bernstein: Ah, versus Web CDs?

Utley: Yeah.

Bernstein: Or Jim's Yahoo! CD.

Bernstein: Okay, then I understand one example.

Boehm: And that's where we're going with the background. We're spinning our wheels here. Now if you want to add that to clarify, that's fine; but I don't want you to take away the distinguishing features that you have over networks because you may have to go run there some day.

Bernstein: Then do what Brian said: add it as an additional factor.

Boehm: Absolutely, but I guarantee you're going to have to argue this when we go to the foreign countries, like at the European office examiner, they're going to be really mean and nasty. I will bet you that they will find some very, very close art, and we will have to be throwing in all kinds...and my guess is that we're going to have to be throwing in all kinds of words that will have to be supported in the spec now to come up with something to survive a European examination if they find anything close, if we're not right that this is totally a broad concept. I'm just trying to...

Bernstein: Okay.

Boehm: We have to have a direction to run, and I need the ammo to do that; and I can't run to the network argument if you've either taken it out...

Bernstein: No, we're not taking it out, we're just...

Boehm: Or just minimized it.

Bernstein: We're not minimizing it. We're just saying you don't need it, but in that environment, it is also added value.

Utley: Let me point out one other thing why it's important...even more so. If you take the implementation like a Zif X, if it's local on your local system on your hard drive, you wouldn't care whether when you pan you reconstruct the piece that you're moving to.

Bernstein: Sure, that's different from what we do.

Utley: Because it moves very quickly.

Bernstein: But it still looks different from what we do.

Utley: But I'm not talking about that. I'm talking about when you move the magnifier, you reconstruct the piece that's coming into the window, but you would never see that. But over the network where you have elements which extend the response time of the system, it becomes a big deal, and therefore what you've got becomes more valuable...even more valuable over a network.

Bernstein: That's what I'm saying. Okay, I agree with that. So we're all hip on that.

Boehm: I think so.

Bernstein: Okay.

Bernstein: All right, let's move on.

Boehm: Where were we?

Bernstein: We're on page...

Boehm: Three, right?

Bernstein: We're through page 3. We're onto page 4.

Armstrong: Oh, and by the way, we also had a change on 21, if you noticed.

Boehm: Okay, let me run over the changes on page 3. <Reading out loud> "...additional map data" should read just "additional new images and sends it over..." that would be fine with me. Oh, how about "additional data as additional new images"?

Bernstein: "Additional source material"?

Boehm: That would be...

Bernstein: "Additional source data..."

Boehm: "...as additional map images"?

Bernstein: Yeah.

Armstrong: I don't think you need "new images." I think just "source data."

Boehm: But it's really getting a new image. It's getting a new map. You're looking to the file. You're going back every time.

Bernstein: Okay, "additional source data." Well, ours goes back and grabs more source data, too.

Boehm: Exactly. But we've got to be careful. But we're not going getting additional new images. I may have to argue that, so you've got to have that in there.

Bernstein: Yeah, okay.

Boehm: "...retrieves additional source data..." how about ", e.g., additional new map images"?

Bernstein: Right. That's fine.

Boehm: Okay, "...and sends it to the user computer." Wonderful. Okay. Next change.
<Reading out loud.>

Bernstein: We already dealt with that.

Boehm: So what do I do? Scratch it? Do I leave it in there, or what do I do?

Bernstein: Well, that's just saying our stuff, so you're still talking about the prior stuff.
Boehm: We're talking prior art.

Bernstein: Okay, so that's scratched.

Boehm: Okay. Next comment...

Bernstein: And that, again, scratch that one.

Boehm: Okay.

Bernstein: Because we're talking Prior Art here.

Boehm: I'm setting up the strawman, but now we're starting to knock him down.

Bernstein: Okay. Also, "there's a need for a system and method for providing a digital image suitable for sufficient file transfers." I don't care if it's hi, low, medium.

Utley: On 21.

Bernstein: 21.

Boehm: It says...I just think that "high-speed file transfers" is a pretty good term of art.

Bernstein: Well, but then somebody will say, "Is that high-speed cable or modem?"

Boehm: Oh, I see what you're saying.

Bernstein: Efficient.

Boehm: Higher speed?

Bernstein: No, we don't care about speed. You could do it at 2400 baud.

Boehm: We don't care. Whether...

Bernstein: The other system didn't care either.

Boehm: Okay, that's fine. I'll leave it, then get rid of high...

Bernstein: You're just stuck with whatever speed the guy's got.

Boehm: <Reading out loud.>..."to engage in long and slow conventional continuous file downloads..."

Armstrong: And that's fine.

Boehm: What's a continuous file versus a regular file?

Armstrong: Get rid of continuous. You don't need it.

Bernstein: Yeah, you don't. What we were trying to say is that additional data there, but we've already got that.

Boehm: As long as...yeah. And that's why I need that language up top to say, "...additional data," "additional new images..." Somewhere where I can go argue that this is what we meant, and that's what the Prior Art does. Okay. Whew! What's on the bottom?

Armstrong: What we've been talking about. It's all we just discussed.

Bernstein: Forget the top comment.

Boehm: I can't really...it's cut off at the top.

Bernstein: That's fine. It's not relevant here.

Boehm: Okay.

Bernstein: "At least twice greater than..."

Boehm: "At least greater than..." that's good.

Armstrong: Not "at least," just "an image size greater than..."

Bernstein: Right.

Boehm: Yeah, duh! Okay. <Laughter> I'll tell you why I'm kind of groggy here now, later.

Bernstein: We were groggy, too. We were doing pans 'til 4:00.

Boehm: Til 4:00?

Bernstein: Yes.

Boehm: And then...so how many hours sleep did you get?

Bernstein: None.

Armstrong: Four.

Bernstein: Well, Jim got four. I got none.

Boehm: Okay, I got ya beat. You got none?

Bernstein: No.

Boehm: I spent the night at O'Hare.

Bernstein: Oh! That's my favorite place to sleep on a bench.

Boehm: On the bench. You got it!

Bernstein: I've been there a bunch of times!

Boehm: Yep, I hear you. I think Doug's black cloud follows him when he travels. Every plane I got on was delayed or broken!

Bernstein: It just follows the travel industry.

Utley: You should have rented a car and driven home.

Bernstein: I almost...I was thinking about that, but I was worried about falling asleep too.

Armstrong: So we're into line 15, 16.

Boehm: Okay, and that's the one that's scratched.

Bernstein: No, and 15 I would say, "The enhanced digital image file replayed on a client viewing device..."

Armstrong: "...displayed on a client's display system."

Bernstein: Yeah. The viewing window having a pre-determined franchise.

Boehm: Do that again. On line 15...

Armstrong: "The enhanced digital image file is displayed on a client's displaying system..."

Boehm: Instead of just...

Bernstein: "...downloadable..."

Boehm: Oh, I see. "...is displayed." I'm sorry, the same sentence is up above. "...is displayed..."

Armstrong: "...on a client's display system, the viewing window..." and then the rest is fine. And then line 22, get rid of "at least two" and create "greater than."

Bernstein: Where?

Armstrong: Line 22: "...a magnification factor greater than..." Wait, what does it say. Hold on. <Reading out loud.> "...a magnification factor..."

Boehm: Oh, "...a magnification factor of at least two..."

Bernstein: No, "...greater than one."

Boehm: Okay.

Armstrong: "...greater than one without pixilization."

Bernstein: We don't mean without pixilization. No...

Armstrong: Yeah, that's right. It should be, "...a magnification factor greater than one." We haven't yet, I don't believe, defined a magnification factor yet, though.

Boehm: No.

Armstrong: It comes later.

Utley: It comes later, yes.

Bernstein: And you can use, where I was telling you, Doug, where it was built onto a frame size, so therefore there's not additional data to draw from, therefore your zoom is zoomed to expanding the fixed pixel set.

Armstrong: And the next sentence, "The enhanced digital file further includes control data to allow the user to control the magnification factor." The question we had here was it seems as though we might be talking about the applet here.

Boehm: Yes, we're talking about the applet.

Bernstein: Then it's two different files.

Utley: Yeah, but...

Boehm: Yeah, but the file...oh, I see, we're calling the enhanced digital image file the encapsulated [sloping? full thing?].

Bernstein: Yeah, and there are two separate files that go to the user.

Utley: But it's encapsulated. It's actually [copied]. They always travel together.

Bernstein: They travel together, separately.

Utley: Right. Then we shift.

Armstrong: They travel together, but they are two separate files.

Bernstein: Virtually, it's one, but really it's two.

Utley: And associated with each other.

Armstrong: But we're calling it "the enhanced digital image file," but that's not necessarily true, Brian?

Bernstein: No, he's saying...here's what the story is, Doug. You got one file above an image, and there's not a single drop of other data in that file. It's called a .JPG...we use it. There's also a file...there's two or three files actually that get downloaded to the computer--or he has it on his system already, it doesn't matter to us--that allow him to zoom and pan.

Armstrong: And those are transmitted simultaneously.

Utley: There is additional data that is required, whether you have a plug-in or not.

Armstrong: Really?

Utley: A plug-in by itself has no information relative to the size of the image, to the number of steps you're going to take to drive into it.

Armstrong: But that's all built in...

Utley: There's another file, like an index file.

Bernstein: Oh, there is. Okay.

Utley: That's what I'm saying.

Bernstein: Okay. I gotcha. The person could have pieces of the file, like the applet, already on his system. But what Brian's saying is there's control data that goes with the image that was based on the image specs that then tells that interface to operate according to a set of assumptions. Right, Brian?

Boehm: Okay. I agree with you. I think what we're...

Bernstein: No, not within the .JPG file. You've got to be very careful. So we're not talking the same thing. Those are additional files.

Bernstein: Okay. Look at page 24, claim 1. "A method of dividing a digital image file comprising two elements, a digital image file...having an image file..." and "2. A user interface for the digital image file."

Bernstein: But we don't have to provide that. That could already be on his system.

Boehm: Oh, my gosh.

Bernstein: He has to have one to view the image; we don't have to provide it.

Utley: But he has to have the control data.

Bernstein: He has to have the control data to tell him how to view the picture, and that could one day be part of the .JPG file, I don't know. But today how we do it is as three separate pieces: an applet, a control file that tells him certain things about the .JPG, and a .JPG. Those things come packaged together. Now, a guy might already have the applet on his machine; therefore, I don't need to send him that packet--the user interface.

Armstrong: If that's true, don't we send it anyway?

Bernstein: No.

Armstrong: We don't?

Utley: We do.

Bernstein: We don't have to, but like...

Utley: We always do.

Boehm: But that doesn't matter with your infringer. That's how you have to think when we're talking about the claims.

Bernstein: What do you mean?

Boehm: Would the infringer on your patent send it?

Bernstein: No.

Boehm: No, he'd send it to you once on the hard drive...

Bernstein: He'd Fed-ex it to you, and then not...

Boehm: He'd start sending you images, and each time he wouldn't be sending...but each time you would be sending some kind of control data?

Armstrong: Yeah.

Boehm: That's what I'm thinking, and that could be interpreted as the second element of the claim here.

Utley: And that control data really controls the motion of the zooming and panning.

Boehm: Right.

Bernstein: But that could even lie technically on his computer.

Boehm: Right.

Utley: The only case where that would actually work is if you knew that the...

Bernstein: The size of the .JPG.

Utley: The size of the .JPG and the size of the window.

Bernstein: And that could be for medical imaging where they give you the specs and say send me every image of this size, you don't have to send every single little thing.

Utley: If that was the only kind of image that everyone wanted.

Bernstein: Okay, we're doing x-rays. There's an X, Y, and Z size; here's our frame size; we never need to get that control data from you because it's built in.

Utley: <Inaudible comment.>

Bernstein: Okay, but let's say we're dealing with a bone doctor who takes strictly legs, and it's always the same. I'm just giving you the case.

Utley: I know, I'd <Inaudible comment.>

Bernstein: Right, and I don't want to get around that.

Utley: The fact that there's radiography is a little bit more than one image size. Theoretically, you're right. You could find an application where there's one and only one image size, then you could put everything in the system.

Bernstein: A size.

Armstrong: MRI always have the same size, don't they?

Bernstein: Right-2'x2'.

Boehm: We thought we had this one nailed down.

Armstrong: In MRIs you also...

Bernstein: You did have it nailed. We're missing...you just want to say "optionally provided."

Boehm: You can't use the word "optionally" in the claim.

Bernstein: We'll change that rule.

Boehm: No you won't. What we'll do is isn't the user interface provided from somewhere...we don't say where it's provided.

Bernstein: It could be any of four hundred of them.

Boehm: It could be provided from his hard drive.

Bernstein: Absolutely. It could be provided from somebody else's hard drive through a network.

Boehm: Exactly. That's why this covers it because the word "providing" is so broad it doesn't mean that we're sending it. See, we're providing a file...the digital image..we're fine.

Bernstein: Okay, I see exactly what you just said.

Boehm: We're providing a file for viewing.

Bernstein: Totally. I totally understand. Well, now we might not be providing the user interface...

Armstrong: Yeah, this still reads that it is "...a method comprising the providing of..."

Boehm: Yeah, you might be doing only step A at a time.

Bernstein: Yeah.

Boehm: Oh, damn. Okay.

Bernstein: Oh, yeah.

Boehm: Okay, that's a good...let's...boy. Let me think about that. What I want to do is make the element A that you're providing a digital image file having this and that, and you're also having control data to work with the user interface for the digital image.

Bernstein: But you might not need the control data. That's what I just said to Brian. What if a client says to you every one of my images is going to be a 2'x 2', and I want 50 time magnification. You never have to give him control data, you just have to...

Boehm: If we make the second part, B, a dependent claim. We can try it.

Bernstein: Do you see what we're saying?

Boehm: Yeah, absolutely. We don't...

Bernstein: And we don't want somebody to get around this.

Boehm: Absolutely. Great broadening work here. We've been through this claim, I thought we had it, everybody agreed to it! And that's where I'm going to run into a problem. I can't re-write this from scratch and get it on file today from working at half-speed here, you know what I mean?

Bernstein: Yeah, we've got to change that, though.

Boehm: These claims are not final.

Bernstein: No, I know, I know.

Boehm: We can file the claims as-is without one word. What we need to do is correct and amplify the specification because we can never add to the specification and keep the same priority date. I can go change the wording of the claims as long as that wording and explanation and interpretation is in the spec.

Bernstein: Okay.

Boehm: So I agree with you. This should be a dependent claim for the bottom half of claim one.

Bernstein: He's going to make that dependent because we don't have to do it but we do.

Boehm: Right. That's how you do optional.

Bernstein: Yeah. I like that. And then claim 1.

Boehm: Now does that read on the Prior Art? You provide a digital image file, having an image...

Bernstein: No, that's the invention right there.

Boehm: Right.

Bernstein: That if you ever looked at what I did back there, it was create a bigger picture for a small frame.

Armstrong: Now if we circle back to where this started on page 4, in the last sentence, that refers to "a digital image file, including control data," which is not correct.

Bernstein: Where?

Armstrong: The last sentence of page 4. It's not "the enhanced digital image file" that provides that, it's an additional option file...

Bernstein: Element.

Armstrong: Right...that would provide that.

Boehm: Okay. This is the summary. I can throw the word "optional" in here. So the "enhanced digital image file A..."

Armstrong: "...may be accompanied by..."

Boehm: I think just "...may further include..." most of the time, right?

Armstrong: Well, no, the file itself won't. It may be accompanied by additional files.

Bernstein: It could be in the file. We don't know. One day you could write [] that has a header inside it that says, "Here's your information." all bundled into...

Armstrong: But this is an exemplary embodiment, which means that today the enhanced digital image file may be accompanied by an additional file which...

Boehm: How about "associated with"?

Armstrong: That's fine, I think. Brian? "Associated with an additional file containing control data."

Utley: I think you should have a very general statement which will always be true, and then you could say, "The enhanced digital image file is associated with control data which allows the user to control the magnification factor."

Armstrong: And the control data...

Bernstein: That absolutely always has to be there, Brian.

Utley: Yeah, okay.

Armstrong: Otherwise you don't have our invention, so that's the right answer. Did you hear that, Doug? "The enhanced digital image file is associated with control data," and that's the only change right there. Strike "further includes" and replace it with...

Boehm: But I thought you said that once you've associated the first one, you never have to associate the rest of them.

Armstrong: When we said the associated was something that was on the hard drive, so we don't necessarily send it, but it will continue to be associated.

Boehm: Okay, okay.

Utley: Yeah, it's always associated. The data always has to be there to prevent zooming and panning.

Bernstein: Right, whether it's in the file, out of the file, with three files, nine files, however the hell you want.

Armstrong: So it will finally read, "The enhanced digital image file is associated with control data."

Bernstein: Hold it. "The enhanced digital image file is associated with control data to allow the user to..."

Armstrong: So "is associated with" replaces the two words "further includes".

Bernstein: Beautiful.

<Inaudible comments.>

Boehm: The rest of this is just comments?

Armstrong: Just on this page, and actually we struck this...5, we struck that. You have to put digital later.

Boehm: I'm still on page 4, guys. With the comments on the bottom, can I scratch them?

Armstrong: No, we took care of that.

Boehm: Yes, I think we've discussed this.

Bernstein: No, that seamless zoom, I love that word because everybody else isn't a seamless zoom, we are. We seamlessly zoom around an image. Everybody else has to grab and give you another frame and stop you and you have to remove to a different image in the picture. We're seamless. You can just go around and move and go, and it's in a virtual environment really.

Boehm: Now is not the place.

Bernstein: No, I know. I just want you to know.

Boehm: We can if you want.

Bernstein: No.

Boehm: "Seamless..." I like that. Let's...

Utley: Seamless may mean continuous motion and zooming is a step procedure. There's steps.

Bernstein: That's true.

Armstrong: It's not seamless.

Utley: The panning is seamless, but the zooming is not.

Bernstein: Right.

Boehm: But, in fact, what I'm trying to get at is Eliot is trying to claim and describe the invention in terms of what the user sees, which is great. As long as you can come up with good words and descriptions, we'll throw that in because we may have to run there if our technical description, which is what I've been trying to do to define the boundaries, fall because some bozo did this before and didn't really make it very public because he didn't know what the hell he was doing. We may have to say, "Oh, yeah, but try putting it on his. It doesn't do what ours does even though we couldn't figure out technically distinguish it in our..."

Bernstein: Right. It was a brand new phenomenon that was hard to...

Boehm: But in order to argue that, I have to have your concept of seamless zooming.

Bernstein: Well, let's use Brian's. It's seamless pan and...what kind of zoom? Continual? Flowing zoom?

Boehm: It appears to be seamlessly zooming...what do you mean "seamlessly zooming"? Do you mean panning?

Armstrong: Both. Both happen seamlessly in ours. When you increase your Adobe picture, you move in and grab a new frame of reference basically at that stage. You're kind of stuck there. In ours, you're not. You can seamlessly...you know what I mean? You can drive further and further and still have the rest of the peripheral view. When you do Adobe, the magnification...is that true, Brian? No? Because when you pull in the painting and you've got the signature... you see, it's not describing what I want to say, the seamless for zoom. It is for pan.

Boehm: The seamless zoom, right. The seamless panning, I like that.

Bernstein: But the zoom is different in look.

Boehm: I agree. Now how do we describe your zoom versus Adobe or...?

Armstrong: Why do you feel different when you zoom in our picture than when you put some magnification in Adobe?

Bernstein: It's not seamless, is it? It's fluid.

Boehm: I don't feel any different. Sorry, Eliot! <Laughter> The only difference that I feel is that I know I'm going to end up pixelating yours and all bitmapped images, whereas I know I'm not going to end up pixelating, I'm going to hit a brick wall, but it's going to be a clean brick wall, for Adobe, and that is...

Bernstein: No, it feels different. You're 100% wrong because you will be the only guy I've shown this to that's said that. Everybody found it unique and everybody who I showed it to said Adobe.

Boehm: For viewing an Adobe vector-based file?

Bernstein: Or a Corel pixel-based file.

Boehm: No, pixel based I'll give you, but yours is different. But when you're talking vector based, I think you can zoom vectors until the cows come home without pixelating.

Bernstein: But you can't...the perspective is different. When you take Adobe and zoom in on the image, you drive straight down to one point and then have to somehow have to move differently to get to other points than you do in ours.

Boehm: Yeah, generally you have to back up.

Bernstein: Right, or something.

Boehm: Zoom and then to go find out where the hell you are. But that's not always the case either, right Brian? Like Adobe PhotoShop or other...

Bernstein: No, I've been using all of these, and it's always been different. Our technique is different than all those. I've been using graphics programs.

Boehm: Yeah, I know, and haven't you seen a graphics program that shows you where you're zooming? I know what it is! On Adobe IV, when you zoom, the left window when you have it there with the bookmarks, it'll show you where you're zooming.

Armstrong: It has the box around that area? Kind of a miniaturized photo of it?

Boehm: Exactly.

Armstrong: Yeah, I've seen that too.

Bernstein: But that's just trying to give you what we give you in a pre-pack...ours encompasses that without having to need that. See, there's a difference that every engineer in graphics that's ever seen that has said "cool," not "oh, I can go over in Adobe and move around images."

Boehm: That's why I wish I were an expert in this graphics area. I would have figured this out...the difference.

Bernstein: Well, now that you say you're not, I need somebody to step in who can because I think that we should file with what we have here, but this area needs to be absolute, not less kind of vague. Because there is a critical difference. It is something that can be optically seen, so therefore it can be electrically defined.

Boehm: And we're trying to do that in the video side with Chris Taylor.

Bernstein: Maybe we do that with him on this. You want to ask him?

Boehm: I don't...he's going to have a kid this summer, and I think he's not even going to be around much in August.

Bernstein: Well, maybe he's got somebody.

Boehm: Yeah, maybe he knows of somebody.

Bernstein: Or go over to my old alumni at Madison, their graphics engineer.

Boehm: This is a...in order to protect our butts, we have to do that by September 1, and that's a big thing to do.

Bernstein: Why? I thought we could always go in and amend our claims on this stuff.

Boehm: You can amend the claims as long as it's supported in the spec. Now if we have to get down to the nitty-gritty of the definition of the technical excuse to amend your claims to distinguish over what has been done before...in other words, if we have to limit our claim to the histogram between a range of X frames per second and Y frames per second, that is our invention. If you incurred less than—I don't know what the histogram shows...17.6 frames per second—that is not our invention, and we may have to go there, to be that narrow to survive if somebody else has done it at 17.

Bernstein: Wow, wait a minute! I hope that's not correct because at lower bandwidth you might have only 17 frames, but you have greater data. But let's get to video later, right?

Boehm: But my point is that you want support in specification, including technical excuse language, because I made need that to put that in the claim to make your patent survive.

Bernstein: Well, let's put something in here that defines this.

Boehm: Yeah.

Bernstein: Something that defines the...

Boehm: But the point is that we can't hire a technical expert to get the...

Bernstein: Then let's get someone in then we'll get a technical expert to define later.

Boehm: If it's to be considered new subject matter...

Bernstein: No, it's never a new subject matter because the first image that did this, did this.

Boehm: No, no, no...new subject matter for the document on the day you file it. They don't care about what you did in your basement. The patent office doesn't care. They care about the words and figures that you put on this paper

when you file it. That's all the patent office cares about. You can't go back...

Bernstein: That's not what you told Chris the other day. Chris said, "What happens with the Mom-and-Pop inventor who later discovers the equation to what they did?"

Boehm: Finding who was the first inventor, that's in an interference. The question isn't whether the patent's valid or not in the scope of your claims, the question then is was Mom and Pop doing it a year before the other guy? But if Mom and Pop didn't describe their invention in the spec, they will never get to an interference or the interference will be blown away because it didn't meet the rule that you have to clearly and distinctly and accurately describe the invention.

Bernstein: Well, we clearly describe it, but we might not know the technical underpinnings, and I've got to go recheck my notes, but I think that's exactly what Chris Wheeler asked you.

Boehm: Absolutely, and I agree with you. We don't need to know the reason why.

Bernstein: But later we can put it in?

Boehm: If it does not add new subject matter.

Bernstein: But this wouldn't be new subject matter, this would just be an explanation of why.

Boehm: Yeah, but if we're up in the fog right now and we are using words that are so broad...let's say our claim said, "Our zoom and pan works really neat." That's our claim. There's no way we're going to be able to go back and say it really means having a frame rate between 30 and...

Bernstein: Then you know what? Put in the word "seamlessly" because I'll be able to argue that until the cows come home that there's a difference between what we do and what they do, and somebody will argue out what seamless meant.

Boehm: You won't get the chance to argue. If we put the word "seamlessly" in the claim and it's not supported in the spec, the court will determine by itself without ever talking to you what it thinks "seamlessly" is.

Armstrong: Do we have to then, in order to cover this particular issue, do we have to get into a description of Prior Art and the standard by which zooming and panning is occurring in Prior Art, and then distinguish as clearly as possible in words, how ours is differentiated from it?

Boehm: That's the ideal way to do it, Jim. That's why I'm saying, and if all of us knew that technical underpinnings, this would be a much more [] written document...

Armstrong: Is it necessary, Doug, to describe it in terms of technical underpinnings, or can we describe it in terms of a user's observation?

Boehm: You're halfway there. "User's observations" would probably give us sufficient...

Utley: "...allows you to seamlessly pan..." and all the <inaudible comment>

Boehm: The claim will be interpreted by the spec.

Bernstein: That's true. <Responding to Utley above.>

Utley: Now the only differentiation is the zoom without pixelating.

Bernstein: Okay. I'll agree with that.

Boehm: And then you saw that I went to umpteen degrees to define what the hell pixelation was because that's a word in my claim. Do you see that?

Bernstein: Yeah, that's fine, and I'm going to concede on that because Brian just made a good point.

<Everyone talking at once.>

Boehm: Because [] will know the reason why in terms of [], but you do have to know enough about what you're doing in order to convey to the average person skilled in the art so he can make and use it and he understands just what the hell it is.

Bernstein: You see, Brian, that's my question now. That comes back to what's different between our zoom without pixelating versus theirs, but we've already described it in the way we built the frame.

Utley: Right.

Bernstein: That's the difference.

Armstrong: Okay, let's stick with that.

Utley: No, we bounded how you prevent pixelation.

Bernstein: Okay, then that's the key.

Utley: We totally bounded it.

Boehm: Okay, I'm lost now.

Bernstein: We're fine.

Boehm: ..."Seamlessly..."

Bernstein: Forget "seamlessly."

Boehm: Okay.

Armstrong: Page 6...we're off of 6.

Bernstein: No, on page 5, I only had one more question. Figure 2, just print film is what it's showing...it can be digital, and we talk about that later, correct?

Utley: We separate it now.

Bernstein: That's where I'm confused.

Armstrong: Page 6, "24 to 32-mm lenses.."

Bernstein: Why? We can use any lens.

Boehm: It's a "such as"...it's an example.

Armstrong: Okay.

Bernstein: As long as it includes every lens.

Boehm: Oh, sure.

Bernstein: Okay.

Boehm: And it says, "may include," but then if we ever needed...you see the reason we get so specific on this, Eliot, is because if somebody else just happens to be doing it out there in the world with a 2mm lens and it doesn't haven anything to do...it doesn't come out looking like yours at all, but it just so happens our claim reads on what the hell he was doing, we can come back and say, "Oh, no, that's not really what we were doing. We really meant this; and if this is important enough, we'll put the words '24 to 32 mm' as a dependent claim."

Bernstein: But it's any lens, isn't it?

Boehm: Yeah. My point is if this 24-32 means anything...

Bernstein: But we can still say any? We are saying "any," but we've defined something.

Boehm: If that was your preferred embodiment, that's the other reason.

Bernstein: Okay, that's fine.

Boehm: It's not limiting.

Armstrong: As long as it's not limiting.

Bernstein: And then "the image of a scene..."

Armstrong: On 10.

Bernstein: Just strike it...."of a scene."

Boehm: Okay.

Bernstein: "...has utilized an image which is being photographed."

Boehm: Okay.

Bernstein: And then you see "The image may be a print film image, analog image, digital image, negative, TV signals..." Can that be, Brian?

Utley: No,

Bernstein: No? "The camera captures shoot..."

Utley: Well, yes, you can use TV signals to create an image, but you can't enlarge TV signals.

Bernstein: Okay.

Utley: But you can use TV signals to get an image.

Bernstein: Okay.

Boehm: Isn't an image just broader than that? It's what the eye perceives; and once it's digitized, then it's a signal...or it's analogized, once it's captured in some format. So an image isn't really captured. It's a captured image when it's analog or digital or negative or film or something, right?

Bernstein: Um, hum.

Boehm: So a TV signal is already captured.

Bernstein: Gotcha. Okay.

Boehm: So what I'm saying here is the image...that the camera is utilized to do the capture.

Bernstein: I've got you. I'm set with that point, actually. Okay?

Boehm: And again, this isn't really...as long as you're best-moded in there, we're fine. And we shouldn't use the wishy-washy language "may be." That's not restrictive.

Armstrong: In line 20, we inserted the word "may" only because it also may not include a developing device.

Boehm: That's fine. The next sentence says that, though.

Armstrong: Oh, it does?

Bernstein: Jim, I noticed that after the "may" came in. And we definitely talked about a digital file, although...

Boehm: Then should we leave the "may" out? Because it will include some...you've got to develop print. I think he was right.

Bernstein: Well, what if it did it all on one system?

Utley: Well, it doesn't matter. It's still developed. Like a Polaroid.

Bernstein: That's what I was thinking was Polaroid.

Utley: That's what I thought, but it does have a developing device.

Bernstein: Yeah, actual images developing device.

Utley: Well, it's self contained.

Bernstein: Right, but it's still...

Utley: Part of the film.

Bernstein: And it's still developing it.

Boehm: I think you better leave the word "may" out.

Bernstein: Yeah, that's what we're talking about. Now my bottom comment is wrong here, but it definitely comes in when we describe a digital image because I'm completely confused by some of the logic there.

Boehm: Where? At the bottom of the page?

Bernstein: Yeah. On a digital image, when we size it, we say we don't make a bigger target frame than we have sourcing for.

Utley: Because as soon as you do, you introduce pixelation.

Boehm: You don't want to enlarge anything unless it's not been digitized yet.

<Everyone talking at once.>

Armstrong: It's part of the shooting.

Utley: A digital image is a digital image. It has pixels, and it has a height and a width.

Bernstein: And it's just placing them all in the frame.

Utley: You see, you place it into...

Bernstein: We've gone over all the developing and scanning and art frame, Brian. Right, by picking "I want my limiting size to be four football fields.

Boehm: Exactly! Now you've got the...[] source image. <Everyone talking at once.> But you don't...usually you don't enlarge that because if you do...

Bernstein: You start pixelating...

Boehm: ...pixelating, and that's...

Utley: Because you're enlarging pixels.

Armstrong: We just create it large, we don't create it small and enlarge it.

Bernstein: But we don't create it to fit the frame, we create it to blow away the frame.

Boehm: Am I understanding correct, though, that you never enlarge a digital image before you process it? That's not a step for a digital image. You only enlarge a print-film image, correct?

Utley: Right.

Bernstein: But what you do do is set...

Armstrong: Set your...the image that you're taking, your target image, add a size so that when it is taken, it is already at a size that exceeds the view window.

Boehm: I see what you're saying, but I don't call that enlarging, I guess.

Bernstein: Okay.

Boehm: Good, good.

Armstrong: Okay.

Bernstein: But let's make this clear because I don't understand it still within the verbiage that's here.

Boehm: Okay, what line?

Bernstein: Well, we'll get to it. That's why I said it's there because I started to get confused, and then later we'll get into it...into the mathematics of it. Just wanted you to be aware of that.

Utley: Okay, page 7.

Armstrong: Page 7...

Boehm: I'm sorry, I want to back up. Did he get into the enlarger? The only enlarging is on page 6, line 24. "System can also include [] 16 for enlarging the image which is developed by developing ..."

Bernstein: Yeah, that's fine.

Boehm: 99.9% of the time, this is going to be a photographic enlarging device.

Armstrong: Right.

Boehm: Right?

Bernstein: Yeah.

Boehm: You may have to use that word someday. I've got to have it in here.

Bernstein: Okay, yeah, because we wouldn't call it a "pixel-enlarging device."

Boehm: Exactly. "...the image may be photographically enlarged from a print film image," okay?

Utley: We said earlier "non-digital image source," in this section, did we not?

Boehm: Yeah. I just want to get the word "photographically" in there.

Armstrong: Okay.

Bernstein: Yeah, and then...

Boehm: "...be photographically enlarged..."

Bernstein: Well, it doesn't have to be photograph. Is it negative of a photograph...?

Boehm: Okay, what's the word then? I think it is.

Utley: Yes, it is.

Bernstein: Yeah, you would say enlarging a negative is a photographic enlargement.

Utley: It's your choice whether you enlarge it as a positive or a negative.

Boehm: What we're really talking is analog enlargement as opposed to digital.

Utley: Right.

Bernstein: Correct.

Utley: Optical and analog.

Boehm: Optical analog, yeah. "Optically enlarged"? No. Yeah. Well, photographically...

Utley: I wouldn't be restrictive...we'll, you don't have to be restrictive in that.

Boehm: Right. And photographically is generic.

Bernstein: Cool.

Armstrong: Page 7, line 19. The question here was just to clarify really more for Brian than anybody is are we able to take our digital image and, and I think we talked about this earlier, but send it right to a set-top box or something else.

Utley: Absolutely.

Armstrong: We don't say set-top box, and I think we said earlier set-top box presupposes that it includes a computer element within a set-top box.

Utley: But Doug, we could externalize that. We could make it explicit that there'd be personal computer, laptop computer, so and so, and set-top box...we could include set-top box in that string of definitions.

Boehm: Right, and technically, this is a little bit goofy. The way we're supposed...and maybe he did it, I don't know, but the first time the number 22 appears in the spec, should be the definition. And the numbers, if you noticed, are in order. The number 10 is the first reference number; 12, 14...that's how you find the reference numbers in a well-drafted patent application.

Bernstein: Well, that confused the shit out of me. Where the 10 came from, why it was there...

Boehm: Well, you start at 10...look at page...and this isn't a big deal for you guys, but look at page 5. You want to go straight 10. System 10, boink! System 10 includes camera 12. We go on up 12, 14, 16, and on up.

Bernstein: Yeah, I followed that.

Boehm: So you never need to know where those reference numbers were defined. That's why you define them up front, and that's where he missed it because 22 hasn't been defined yet but he's using it-computer 22.

Armstrong: I first shows up in line 17?

Boehm: Exactly. So let's genericize that and define it later. <Reading out loud.> "Alternately, a digital image may be provided from camera 12...may be provided directly..."

Armstrong: ..."to the user." In line 17.

Boehm: Um, hm.

Armstrong: "...to the user," and then the first reference is in line 21, where we define computer 22. That's fine.

Utley: That's good.

Armstrong: And then add to that "set-top box."

Boehm: Yeah, down below.

Bernstein: Or TV.

Boehm: Or whatever. We're getting there. Hang on. So it's "...to the user via a communication link..." I'm getting rid of "or cable" because again he hasn't defined 23 yet. 23 will be defined later because he hasn't even introduced 22 yet. That's what happens when you edit a patent application.

Utley: Doug, how would you take care of the situation where the set-top box may be integrated into the display device?

Armstrong: I think that might be covered in the next thing, where we say, "Computer 22 includes the CPU, a ROM, a RAM, and a display device..."

Boehm: Exactly.

Armstrong: ..."or input device. It also may include any hardware device, peripheral device, or software necessary to perform the functions described herein."

Utley: Right.

Boehm: Yep. I guess we're there.

Armstrong: That does get us through that.

Boehm: That's the function of computer 22. Processes the digital image file, correct?

Bernstein: Yeah.

Boehm: We're talking about figure 1 still, right? You've got the figures pulled out to the side like I do, right? Sure.

Bernstein: Sure.

Boehm: Yeah, you're supposed to because when you're reading this, you're supposed to have the...

Bernstein: Mine are so bent up, it's not that hard to get to.

Boehm: Usually the pages are so out of order, you can't find the figures anymore. So "System 10..." see the number 10?

Bernstein: Yeah.

Boehm: "...includes computer 22"--that's his box 22- "...configured to process computer image file created by the above-mentioned devices." That's the definite of 22. Now we...so it's a processing device, right?

Utley: Right.

Boehm: It processes...right, okay. "Computer 22 may be a personal computer, a laptop computer, a mini-computer, a microprocessor, mainframe computer..." He's going bonkers here..."a network computer..."

Bernstein: That's good. A set-top box?

Boehm: Yeah, we can throw "a set-top box" in there.

Bernstein: You want these words.

Boehm: A toaster in there if you want!

Bernstein: Yeah, a toaster with a display.

Boehm: Right, and a processor.

Armstrong: The following sentence kind of wraps it all up or anything Doug has.

Boehm: Okay, so where am I putting set-top box?

Bernstein: Under...

Armstrong: After one of those things...after...

Boehm: But we haven't shown NTD yet.

Bernstein: Yeah, but set-top box should be TV, too. Well, a set-top box plays through a TV...well, no, it doesn't have to.

Armstrong: Let's put set-top box after server computer...

Bernstein: And TV...or TV.

Utley: You said set-top box goes between...

Armstrong: The TV.

Bernstein: Or if it does what you said and the TV comes...

Utley: But we have to take care of the case where it's built into the...

Bernstein: Right. TV.

Utley: But then you depend on the CPU, the read-only memory, the RAM.

Armstrong: Does all that need to be in the TV?

Utley: Yeah.

Armstrong: Okay.

Boehm: My question is if you define computer, 22, as the thing...oh, my gosh, 22 isn't the user's...is this...

Bernstein: No, isn't that our computer?

Boehm: This is our computer. 26 is the user's computer and display and set-top box...I mean, 28 and 30, that's what I was thinking about. Where it says later in the next page, and say, if you look at the figure 1, 28 and 30, could be combined to be a set-top box or a TV or you name it.

Utley: Yeah, user computer.

Boehm: Or a toaster with a display.

Utley: Right.

Boehm: The point is, what is computer 22? That's the one that puts it on the Internet. That's your server.

Utley: Right.

Boehm: So you don't put the set-tops...

Utley: That's the one that processes the source image. It creates the file.

Boehm: It's the digital image file.

Utley: And it may be the server.

Boehm: It may be the server, but no matter what, it would be a computer. To put it on a hard drive or to put it on a CD ROM, right?

Utley: Right.

Boehm: That's what we're getting at here. It's the processor. It's the encoder, isn't it?

Utley: Yes.

Bernstein: Yes.

Boehm: So could it be a personal computer? Sure. It could be any of these he's got.

Bernstein: Yep.

Boehm: So, he's correct so far without changing.

Bernstein: Right.

Boehm: "Computer 22 includes a CPU, a ROM, a RAM, a display device, input device..." I would...he's defining it there. I would say, "...typically includes."

Bernstein: Yeah.

Boehm: Because it may be missing one of those.

Bernstein: Yeah, absolutely.

Boehm: "...typically includes..." blah, blah, blah. Good. "... computer. It may also include any other hardware device..."

Bernstein: That covers it all.

Utley: I've got to go back to page 7, because we made a change I don't think we should have.

Boehm: I'm still on 7.

Utley: Okay. Line 17. "Computer" is correct—we shouldn't put "user" there.

Boehm: You're absolutely right, but I can't call it computer 22 yet.

Utley: You're defining the processing unit.

Boehm: But the whole point of the paragraph is to say print film versus digital, and this print film is going to be enlarged and scanned. Alternatively, digital file is provided directly without first creating a print image. It doesn't matter where it's housed.

Utley: Right, just say that.

Bernstein: Let me ask you this. Did you ever create a case where the analog camera takes the pictures according to the right specs and puts them on the film that way, or would you have to use larger film format?

Utley: No, you can't.

Bernstein: We can't go that way?

Utley: Well, but we do that with 4x5s and fill.

Bernstein: But it's still 4x5?

Utley: Right.

Bernstein: When you've shot the picture, it's 4x5. You can't tell the camera to shoot this 10 times bigger?

Utley: No, but what you do is you scan it at different density.

Bernstein: And that gets it the bigger...

Utley: That creates the...

Bernstein: That's where I'm probably getting confused on this digital image thing. Yeah.

Armstrong: What if you just moved...what if you left line 16 and 17 alone and just moved the whole paragraph, beginning with line 21, in front of that, where you defined computer 22 before it's used in that sentence in line 17?

Boehm: Because it doesn't really flow there. What you're trying to do in that paragraph, he's says, "If the images obtained are digital..." he's describing the printing device 20 there, and that has to be described...20 has to go before 22. That's where he's introducing what 20 is.

Armstrong: Yeah, although with line 15, the sentence starting with "alternatively," that actually does not talk about printing.

Boehm: Let me read it again. I think you're right. "...if the image is obtained with a digital camera, a print image may first be obtained..."

Armstrong: What he's saying, you took a digital picture and you want to print it and then enlarge it.

Boehm: Yeah, he sends it to a printer, 20. "In this manner, print image can then be enlarged and scanned."

Bernstein: Right. So even though you don't have to...

<End Side 2, Tape 1; begin Side 1, Tape 2>

Bernstein: Tape 2, Patent Meeting, Docket 57103-120. Let's start on page 12.

Boehm: Wherever you want to.

Armstrong: And I think a lot of this is going to be totally fixed up by this change that Brian's made, or this correction that he's made, but I just want to be certain of it.

Boehm: And I'm a lot colder on that, guys, than Steve was, so just do a dump on me, make me the corrections, and I'll just do it kind of cold without analyzing it; and then when I read it again tonight, I'll see if I can...

Armstrong: Okay, the first thing Brian, I just wanted to make sure what you meant here. You want that to be VWW?

Utley: No, VIH.

Armstrong: Or VWH?

Utley: It can be either one, but I want it to be BIH.

Armstrong: Okay, well then let's talk about it because then what we're doing in the first line of this page, we're saying, "The viewing image height and viewing image width within the viewing window can be determined by comparing the source and the aspect ratio of the viewing window application." So the unknowns are the height and the width of the viewing window.

Bernstein: Viewing image window.

Utley: Why should you add aspect ratio? What it says if you compare the aspect ratios—you know what those are—

Armstrong: For the source and the viewing window.

Utley: Right. If you know what the aspect ratios are, you all you need to know is determine whether you are going to use VWH as the basis or whether it's going to be VWW.

Armstrong: Okay, so let's just say in the first that the source image aspect ratio is greater than the viewing window aspect ratio.

Utley: Right.

Armstrong: Then we're going to set the viewing image height equal to the viewing window height.

Utley: Right.

Armstrong: And then the next line, in order to get the viewing image width, we need to divide the viewing image height, which we don't know.

Utley: We do know.

Armstrong: Okay, tell me.

Utley: That it's equal to VW and VWH.

Armstrong: Oh, okay. So we're really saying the same thing?

Utley: Yeah.

Armstrong: Right, we're saying the same thing.

Utley: Yeah, but this is mathematically correct.

Armstrong: Okay, so we are saying the same thing.

Boehm: How about grammatically, Brian?

Utley: Pardon?

Boehm: But I'm partially kidding on that, but when you use the phrase "target image size," go to...well, you don't have...

Utley: Let's come down...

Armstrong: Let's come down. Let's say if that's false.

Boehm: My question is the language. You say on line 23, 24..."a target image size TIS has a TIW and a TIH." Does that make sense to call the window a TIS or a VWS for size? It's the same concept-width times height equals something. You want to call it area? That's even clearer.

Utley: Yeah, size and area are interchangeable.

Boehm: Well, maybe we should say that the target image area-TIA. "Having a target image width times the height..." That's beautiful.

Utley: They're interchangeable, so it'll work either way.

Boehm: Okay.

Armstrong: Let's just continue.

Utley: Let's say we're defining size as area, size is total number of pixels, which is area.

Boehm: My only question would be can I make the...at the top of page 12 where you said, "...the viewing image height, gauge, and viewing image width (VIW) within the viewing window area..." VWA?

Bernstein: Yes, that would be very clear.

Boehm: Yeah. You're also consistent with the target image area, but am I doing the wrong thing here, Brian, because you used VW earlier. Are you using it consistently?

Utley: Yeah.

Armstrong: Yeah.

Utley: Yeah, it's consistent.

Armstrong: See, just continuing with my thought pattern in the [us?] statement, I would just reverse the order of these and put VIW.

Utley: It's right there.

Armstrong: Okay, okay.

Utley: So if you pick it up off the computer copies that I sent, it's correct.

Boehm: Oh, okay. Is that what he did? Just plugged it in?

Utley: Yeah, this is what I sent him last Thursday.

Boehm: I see.

Utley: I had written it. This is where it was transcribed.

Boehm: Okay, well clue me in where this started, Brian.

Utley: So you go down to...

Boehm: Is this page 11 on your sheet, or not?

Utley: Page 1 on the aging process.

Boehm: We're at page 11 of the text. The formula starts on figure 7.

Bernstein: Yeah, you've got to go back to 11 and start him at figure 7.

Boehm: Yeah, start me off here so I don't blow this.

Bernstein: Right, he wants to get every term.

Utley: Oh, okay. On page 11, we define the aspect ratio.

Boehm: Right, which is on page 1 of your new...

Utley: Right, got it.

Boehm: Okay, that's what I wasn't sure. Brian, you still want me to use his text because it looks like...

Utley: Yeah, his text is fine.

Boehm: Yeah, it looks like he added words to your...

Utley: Yeah, no, he expanded...

Boehm: He expanded to make it readable.

Utley: Right.

Boehm: I see what you're saying. But the formulas, let's go through each one of the formulas and make sure they're correct, right?

Armstrong: That's what I'd like to do now before I run out of time. Brian, down in...you're on 12?

Utley: Yeah, right.

Armstrong: On 12 when we, after line 25, when we start talk about these equations, the statement here I don't see as being expressed right. Now I could be wrong, but the $TIS = the TIW \times the TIH$, agreed; but that also equals $VIS \times the magnification \text{ factor}$.

Utley: That's correct.

Armstrong: When I re-do this formula, I understand that the magnification factor is VIS/TIS .

Utley: No. Not true. The magnification factor is TIS/VIS .

Armstrong: Actually I had it the other way- VIS/TIS .

Utley: TIS/VIS .

Armstrong: It's the ratio of the viewing image to the target image?

Utley: Right.

Armstrong: So it would be VIS/TIS .

Utley: What's the ratio?

Armstrong: It's got to be one over the other, so we express it right.

Utley: It's the TIS divided by the VIS .

Armstrong: Okay, let's go to line 19. Then this is stated wrong: "The magnification factor is defined as the ratio of the viewing image to the target image." So that needs to be reversed.

Boehm: Right, but that's word for word what you had on top of page...

Armstrong: So it's defined as the ratio of the target image to the viewing image. Okay, so those need to be reversed, in which case we've got $TIS/VIS = MF$. If I'm solving for TS, I've got $TS = VIS * MF$. Now you're right. So down below is fine.

Boehm: Yeah, because the target is going to generally greater than the viewing image window.

Bernstein: Yeah, I just couldn't reconcile the formulas because of that transposition, that's all.

Boehm: Brian, what are you rationing? The size? The area?

Utley: You're rationing the area.

Boehm: The area.

Armstrong: And I like that clarification because it's...

Boehm: Didn't we way it's the ratio of the areas, or of...you mean the ratio of the viewing image area to the target image area?

Utley: Yeah, because when you magnify, you magnify an area. Magnification [is an aerial?] a function.

Boehm: Excellent.

Armstrong: So height time width is area, which would be good every time we referred to target image or viewing image, we called it viewing image area or target image area.

Utley: Yeah. The only reason why I picked size instead of area is because we talk about aspect ratio, and you begin to use the A...the A shows up in a number of different forms, and therefore I didn't want to confuse you with A in one being A, aspect ration, being the same as A in area. That's the reason why I did that.

Armstrong: Okay.

Utley: But we understand that area and size are synonymous.

Boehm: Let's just get rid of the A in aspects and make it SIR. That solves your problem, and then everything else is also...

Armstrong: That's right.

Boehm: ...three digits, right?

Utley: That's okay because that would define aspect ratio as R.

Utley: Yeah, that's fine.

Armstrong: And it goes on line 4 as well.

Utley: Yeah, all the way through.

Armstrong: Again, Doug, just in the interest of time, I think what I'd like to do is apply the semantic changes to the text after we've made sure that some of my math questions...that Brian and I are on the same page before I have to leave.

Boehm: And I'm not even sure we'll have to do that because I have to go through it when I do the edits here, and I will do the same thing that you are doing and make sure it makes sense.

Armstrong: Okay. On the top of page 13, then, what I was able to determine from this and confirm with Brian is that the source image aspect ratio is equal to the target image aspect ratio. The question is was this intended because, and we started to have this conversation, is that we may not have...we may crop photographs, we may want to stretch a photograph...

Utley: Let me explain how that works. First of all, in the image sizing program, you have the ability to change the size of the source image from a standard image. In other words, if you are cropping, you can specify the crop, and it will give you the right dimensions and it will fit it into the viewing window. So a cropped image...

Armstrong: But it lost data. When you crop, don't you cut away a piece of data?

Utley: It's before you get data. It's while it's still an image.

Armstrong: So it just smushes it in right?

Utley: Yeah. It puts it into the viewing window properly. So you can specify a cropped image source without any problem. But the case that isn't covered yet...there are two cases that aren't covered yet. One is where you digitally crop an image, okay, which you can do. You can get there, but you have to know how to get there. The second is, we have not covered the case of the panorama or stitch images.

Bernstein: But it's all one image in the end.

Utley: I know, but we want to cover the case of the dimensions because it assumes that you always fit the image into the viewing window, but in the case of stitched images, you don't.

Bernstein: Why?

Utley: You let the...

Armstrong: The image flows beyond it.

Utley: The image flows beyond the edges of the viewing window.

Armstrong: It does?

Utley: Yeah.

Armstrong: When you first look at a Hyatt Hotel pool shot, you don't see the whole shot. You see one shot, and then you pan around it. So you're not fitting the whole image into the viewing window.

Utley: Right.

Bernstein: We never were. Prior Art does that.

Boehm: On a photo you are.

Armstrong: And a Prior Art also gave you the ability to do that.

Utley: Yeah.

Bernstein: But on a MAC standpoint, he's not creating that formula for fitting a panoramic image...

Armstrong: Into a viewing window because you don't do that.

Bernstein: Gotcha.

Boehm: What do you do in terms of actually doing the math, Brian?

Utley: When I get that built into the image sizing program, what it will do is it will size the panorama into the viewing window vertically, and then it will allow you to pan horizontally across the image.

Boehm: Or vice-versa.

Utley: Theoretically, yes, although we don't have any examples of that.

Boehm: What happens if you wanted to...well, panning bigger, if you want it bigger...

Bernstein: You could do what you're saying and pan vertically and horizontally, we just don't do it.

Utley: But if you did that, then what I'm saying is you size the image into the viewing window so always see one dimension completely until you start zooming.

Boehm: My suggestion is that we don't...of course, we're not going to worry about that today, we don't have the time to do that. When we get to the end of this, then we'll say, of course, when you stitch images together to do pick your pan, you would first do the small size, and then whatever.

Utley: Right.

Boehm: We'll just handle it because the point of this math is to give us a basis for putting technical definitions into the claims if we run into the problem that we need it during prosecution.

Utley: Not only that, but it's also very helpful when we're talking to...when we're doing due diligence and we're talking to people about how does it work. This is how we sit down with them and say here's how it works. This is not something that's off the seat of the pants. This is something that follows a disciplined structure.

Boehm: Absolutely, and that buys you credibility.

Utley: Right, and then when we license someone, this is part of the documentation.

Boehm: The biggest thing is is it the best mode? Remember, we have to disclose the best mode of making and using your invention.

Utley: Yeah, and this is the best mode.

Bernstein: This better than blowing up images.

Armstrong: Let me just further throw into this source image aspect ratio equaling the target image aspect ratio for a second. I've got just an example written on the side with those people in a box. If we start with the small image here, which is a 6x8, and we blow it up to an 8x10...that doesn't matter, we end up with a source image that's 4x5, and then we just make the target image 4x5, right?

Utley: Right.

Armstrong: So it's not that one is...because the little one is not the source image, it's the bigger one that's the source image after we've done the cropping.

Bernstein: No, that's the target image.

Armstrong: No, that's the source image that goes into the system. Then we create the target image.

Bernstein: No.

Armstrong: Yeah, this is before it goes in.

Utley: If the source image is, say, at 8x10, what the formula does is tell you how to scan it so that you arrive at the right target image. So if you go down further, it says, "And, by the way, if you follow the program, the program says the right scanned density for this is this many pixels per inch," and that will produce you a digital image which has a magnification factor...

Armstrong: That's the next step. I think I know the answer to this, but in this example, which of these two things is considered the source image?

Utley: The source image is the 8x6.

Armstrong: The target is the 8x10?

Boehm: We have to define that, guys.

Armstrong: Okay, hold on because we've got...let me just follow this math. I just want to understand why I'm wrong here. In the source image then, we have an aspect ratio of 3:4 on an 8x6.

Utley: Because it's a portrait.

Armstrong: It's a landscape.

Utley: Okay.

Armstrong: This is a picture of my kids on the beach, but I want to frame it in a portrait frame, so I'm going to go in and I'm going to crop the edges and turn it into an 8x10 and blow it up.

Utley: Where do you crop it?

Armstrong: I'm going to crop it on the scanning program, let's say. I've got a print image, and I'm going to throw it on the scanner. I'm going to throw this on the scanner. I'm going to crop the edges of, blow it up to an 8x10.

Utley: You don't do that on the scanner. You don't blow it up on the scanner.

Armstrong: Okay, well let's say then I blow it up on a...let's say I blow it up before I scan it.

Utley: Right.

Armstrong: And then I crop it. I end up with an 8x10, which is an aspect ratio of 4:5.

Utley: Right. It's not portrait.

Armstrong: It's not portrait?

Utley: Right. 5x4.

Armstrong: Exactly, right, 5x4. I did that backwards. So now I've got...

Utley: An aspect ratio of 1.25.

Armstrong: Right, I've got a three-quarter aspect ratio for what you're calling my source image.

Utley: No, you've got...I don't know anything about that. All I know is that is this.

Armstrong: This is the source image. That's why I asked you which one was the source. This ends up being the source. <Everyone talking at once.> ...the original picture...

Utley: I don't know anything about that.

Bernstein: Why?

Utley: Because what you put in the scanner, the system considers to be the source image.

Armstrong: Although there is a step here...

Bernstein: Well, this is what I was putting in the scanner.

Armstrong: There is a potential step here is not a part then...

Armstrong: Because then the enlarged image is the source image.

Utley: Right.

Armstrong: Because there's a step before digitizing that says we can take an image of any size, create the ultimate source image from that in any dimension you'd like via cropping and enlarging, and then we will end up with what we are calling in these formulas a source image. But we don't talk about this. I don't know if it's important, but it's a step that confused me.

Armstrong: Brian's saying it's not important.

Armstrong: It's not important to this formula; but what I'm wondering if it's important to our process.

Bernstein: Well, certainly it's part of the process.

Utley: Well, no, if you go back through and you understand this, what your controllables are, what your scan density is, what your aspect ratio is, how you fit it into the viewing window, what your target size is, and if you know all of that, you can determine the trade-off between your ultimate source, whatever that be, I know nothing about that, and what you put in your system.

Bernstein: I recognize that. I'm one step before that whole process, and now we're taking ourselves outside of the math, and then we can table this and you guys can talk about it later. You just told me that this lower image is the source image.

Utley: Right.

Bernstein: Yet it's not what the client gave me. The client gave me this picture. Greg Manning gave me a baseball card with a whole bunch of header information and said take the header out, give me just the picture of [Newell] Lowell or whatever his name was...just the picture. So, I don't know if we want to include anywhere, if it's important, the step that is our editing of an original image before it becomes what we are calling a source image. That's all. And let's leave it there for right now.

Boehm: That's the same problem I was confused with, and when I look at Brian's figure to say that the target image is surrounding the viewing image, I get confused as to what he means by the target image.

Utley: Well, the target image is the file...

Boehm: What's the word "target" mean?

Utley: Because what you are doing is you create a virtual image into which you zoom and pan. It is a virtual image.

Boehm: Oh, so you're targeting to the virtual image?

Utley: Yeah.

Bernstein: Or you're targeting that big [].

Armstrong: What you're talk about is semantics, and I had the same conceptual problem on my first read, understanding the difference between target, source, and viewing.

Boehm: And viewing, yeah.

Armstrong: And that's something you guys can talk about, and that's just really a global change in semantics if you decide to do that. But I'd like to move onto the next question I have that's formula driven, and it's the scan density.

Utley: Right. It's not in here, it's on the image sizing program.

Armstrong: This?

Utley: No, the other one that I have where you put in your parameters, and it automatically computes.

Boehm: You can use an Exel spreadsheet with macros to do that with code. We have not written an application on that yet.

Bernstein: Well, that should be here.

Armstrong: Yeah, because we reference it. We reference...

Boehm: You reference the program?

Bernstein: We reference the math.

Armstrong: In line 11, we're talking about how we determine a minimum scan density, and we actually have a formula here, which I don't understand.

Utley: The minimum scan density says that you will scan at that DPI or...

Armstrong: That's height, or is it area?

Utley: No, it's scan density.

Armstrong: Okay, let's look at this formula then.

Boehm: Where are you? What page?

Armstrong: I'm on page 13, line 13.

Utley: It's the ratio of the source image height to the target image height.

Armstrong: Just height? There's no width...

Utley: No.

Armstrong: ...in there at all?

Utley: No, because you've got a fixed aspect ratio. The two aspect ratios are the same, therefore it doesn't matter. And if you try to use area, it's a square function, so it doesn't give you the right answer.

Armstrong: And does this end up giving us the dots-per-inch result?

Utley: Yeah.

Armstrong: So if I've got a height, then you're saying we're expressing the height in terms of pixels?

Utley: It can be either in inches or in pixels. Typically it's in inches because when you want a...your scan density is when you're scanning, and you're scanning is in...

Armstrong: Okay, then let's use an example I put here. If we have a source image of an 8x10, and our target image is going to be...let's fix this and call it an 80x100 so we keep the same aspect ratio...

Utley: Right.

Armstrong: We then end up with an MSD of the height...

Utley: Your target's going to be in pixels.

Armstrong: Okay, well this is what I want to clarify, then, because that doesn't say it. So the target...

Utley: The target is always defined in pixels. It says area in there, but it's always pixels.

Armstrong: Okay. But we don't always use the TIH in a formula in a pixel form.

Utley: You always use it in pixel form.

Armstrong: We do?

Utley: Yeah. That's the only way it's ever expressed.

Armstrong: Even up in these formulas and everything?

Utley: Yeah.

Boehm: Does it have to be in pixel? Can it be units?

Utley: No, it has to be pixels.

Armstrong: And the viewing image width is always in pixels?

Utley: Yep.

Boehm: Viewing target but not source?

Utley: Well, the source is whatever medium the source is in. If it's a 4x5 piece of film or an 8x10 enlargement, or whatever.

Armstrong: Well, let's follow this through then. So...

Bernstein: Then that's not a source image. The source image is what you create by forming the 4x5.

Armstrong: That's something we need to clarify.

Boehm: Exactly.

Armstrong: We need to be able to say the target image in these formulas...or to calculate them, target image heights, widths, and sizes are all...

Utley: Viewing window is in pixels, height in pixels. Okay. Source image generally in inches. I mean, I laid that out.

Armstrong: Okay. It wasn't in this one. But let's just look at this for a second. What would the number of pixels be on something like this if I've got 80"x100"? What would 80" be in pixels?

Utley: That's probably around 8,000.

Armstrong: 8,000. So we've got 8,000 pixels divided by the height of the source image is 8, so we have a scan density of 1,000.

Utley: Right.

Armstrong: Okay. That works. Fine. Okay, example 1. Let's go to example 1. Your assumptions, for example, you want to change from this sheet to the next, Brian?

Utley: Right.

Boehm: Are we doing example 1 of the...

Armstrong: On page 13, beginning on line 17.

Boehm: Are there changes, Brian?

Armstrong: Perhaps. We're going to go through it.

Utley: I'll look at it and see.

Boehm: Why don't we just go to the example 1 in your new?

Utley: Okay.

Boehm: Unless it's the furthest.

Armstrong: It's not furthest. Okay. So we've got a source. Everything's the same here. 320x48 is 400 pixels. Viewing image size is equal to 128. Target image size is equal to 2560. Good, we've got the square root in the formula now. The 1789. Target image height is 1431. Minimum scan density, I think is wrong.

Utley: No, it's not.

Armstrong: The minimum scan density is said to be...

Utley: You multiply the minimum scan density...

Armstrong: Right, but let's just do the formula. The minimum scan density is what? Defined as the target image height, which is what? 1431, right?

Utley: Right.

Armstrong: Okay. You have 1789.

Utley: Oh, I'm sorry. The target image height...you start with the target image width...you can do it either way. It's 1431 is the target image height.

Armstrong: Right. That's the formula. So in order to use your formula, it's 1431 divided by what?

Utley: By 4.

Armstrong: Not by 5?

Utley: No.

Armstrong: Okay, so that's just a general correction. You actually end up with a very similar answer, mildly different by only, I think. .75, but it is different. Oh, no, you don't. You get...wait a minute. <reading to himself> ... is the target image height in example 1...it may just be a rounding function...

Utley: It is.

Armstrong: But as we show the math, we should show it consistent with the formula, right?

Utley: Yeah. What does it say?

Armstrong: 357.75.

Utley: Right. Just round it up to 358. There are no such things as fractions of pixel settings.

Armstrong: $1789/5 = 357.8$, so it's slightly different, so that's why...

Utley: It's not different. You can't have a fraction of a pixel.

Armstrong: Don't get upset about this. You have an error in the way you show this, and all I'm doing is pointing out that we can't have it in the patent that way. We have a formula that says it's height divided by...it should be 1431 divided by 4. We just went over that on the previous page. That's all I'm saying. Either way, we need to express it as 1431...that's all I'm saying.

Utley: I see what you're saying. I understand.

Armstrong: Do you have that, Doug?

Boehm: No, I'm still trying to figure out...

Armstrong: Okay, look on his new sheet.

Boehm: Yeah.

Armstrong: The only correction to his new sheet on page 1 is the second to the last line. "The minimum scan density equals 1431 divided by 4 equals 358." That's the only change.

Boehm: Okay.

Armstrong: Now, let's see...did I have anything on this one?

Boehm: Good catch, Jim. Thanks.

Bernstein: On 2, I think we have the same file [].

Boehm: What?

Bernstein: We're best friends for this very reason. I sucked in math.

Armstrong: This one's just the exact same thing on 2 where we're just using the wrong number. We get the same answer, but we're using the wrong number. The minimum scan density, second to the last line, should be 1431 divided by 4 equals 358.

Boehm: Which is the same...

Utley: It's the same number.

Boehm: The same fixes as...

Armstrong: Exactly. Same number, it's just the equation is expressed incorrectly.

Boehm: It's the same text...the same change we made to example 1.

Armstrong: Exactly, exactly. In the middle of that example 2 on page 4, there's a statement that says, "The target image size equals the viewing image size times twenty." I can't find where that relationship is defined in a previous example where we say that the target image size equals the magnification factor times the viewing image size. And if it's not, we need to just put it in because it's obviously right, it's just not stated.

Boehm: On the top of page 2, when you define magnification factor, and you're saying it's a ratio of the viewing image to the behind-the-scenes target image, so it's going to be a less-than-a-one number. See, we're getting targets and viewing screwed up. The terminology, I think, is screwing us up, right? Because weren't you using magnification factors of twenty? That would have a viewing image of twenty sizes larger than the target image.

Bernstein: That's what we found last night...

Utley: No, the magnification factor is the...the target image size is the viewing image size times the magnification factor.

Boehm: Right, how do you define the magnification factor...oh, that's what...the viewing size...

Armstrong: But in the patent pages, do we have that, Brian, somewhere? Because I looked for it, and I couldn't find it.

Boehm: It's page 12, the middle, it's where he defines magnification factor, and it's not where it should be.

Armstrong: Right, but I don't see it there.

Boehm: "...ratio of the target..." we're going to call it "...the target image area."

Utley: It's down on the bottom. "The target image size is the target image weight times the..." "...which is equal to the..."

Armstrong: There it is. "...viewing image size times magnification factor."

Boehm: Right.

Armstrong: Okay, so that's the one I had a problem with because we inverted those two things, so that explains that. That's fine. Let's move on. Now, did I have anything else on examples? Example 2...example 2...

Boehm: One more point. When you say the magnification factor, it's really the maximum desired, isn't it? Magnification factor, Brian?

Utley: Yeah.

Boehm: Because magnification factor is any zoom. What you're worried about is the maximum, your deepest, right?

Utley: Right.

Boehm: Okay. So I want to make this MMF for Maximum Magnification Factor, okay?

Armstrong: Okay.

Bernstein: Where was that?

Boehm: I'll fix it. Don't worry about it. It's really at...

Utley: The magnification factor is the maximum magnification factor.

Armstrong: Always?

Utley: Yeah.

Armstrong: What about the minimum?

Utley: The minimum is 1.

Armstrong: 1 plus something?

Utley: Right. Now, then, this is what you're designing it to.

Armstrong: Page 5 of Brian's new thing...page 5, example 3. This minimum scanned density, again, I think is wrong. We've got a target image...what is the formula again? I keep forgetting. Target image height of 1610, right?

Utley: Where?

Armstrong: Example 3. 1610 divided by the source image height, which is 5. So 1610 divided by 5 is 322. So it's just the expression is consistently just reversed.

Boehm: And you're on page 5, it's the minimum scan density?

Armstrong: Minimum scan density equals 1610 divided by 5, which equals 322.

Boehm: Okay.

Bernstein: What is that last? "The photos can be any scan density greater than 321"?

Utley: As long as you scan at a higher density than that, you will never pixilate.

Armstrong: Since we get to this answer here, that's his conclusion. You have to be at least 322...321.

Bernstein: For that particular example?

Armstrong: Yes. That's the answer to his equation.

Utley: What this is telling you is that when you scan this image in, you've got to do...you've got to start at least at this density.

Bernstein: To get that result of 20?

Utley: To get that result.

Bernstein: I finally understand.

Armstrong: Okay, let's go to page 20 in the patent file.

Boehm: Okay.

Armstrong: It was...actually, never mind. At the bottom of page 20 where I say, "really?" I already talked to Brian; I understand completely why that is now.

<Difficult to understand; Boehm and Armstrong having a side conversation.>

Boehm: Okay.

Armstrong: And as long as this one has the square root thing in it, which I'm sure it does, then we're fine on that example.

Utley: It does.

Armstrong: Okay.

Bernstein: Doug, you're supposed to be picking up these square root issues...

Boehm: Hey, you guys are supposed to be picking this up. Actually, I was hoping you could work closer with Steve than the timeframe we had; but I'm taking the last pass at it here, so I'm going to try and get another pass at it.

Bernstein: Cool.

Boehm: And I am trying to get another pass at it, and I would have done the same number exercise that you've done for us, Jim.

Utley: <As an aside to Jim and Eliot.> Can you meet me in Philadelphia on Friday morning?

Armstrong: I think so.

Bernstein: This Friday? I don't know.

Armstrong: Well, I need to check my calendar.

Bernstein: Other than just checking?

Armstrong: Yeah. What time?

Utley: Can you pick me up at the airport?

Armstrong: Yeah.

<Continued background conversation between Utley and Armstrong.>

Bernstein: Doug, why don't you make these changes?

Boehm: Yeah, I will.

Bernstein: Start with this because I think we can pick up our changes later, can't we?

Armstrong: Well, let me give you a few more that I wasn't real sure about.

Boehm: Well, what's the...what do you think is the extent? If we go through page by page, you're right, it's going to be forever.

Bernstein: No, I just want to go through my comments real quick. If Brian has any additional, that's fine.

Boehm: Okay, and remember we can change the wording of the claim as long as it's recorded.

Bernstein: No, no, this is the body. These are minor fixes.

<Everyone talking at once. Shuffling as Armstrong leaves the room.>

Boehm: Thanks, Jim, for leaving.

Utley: <Chuckles.> He's going to catch a plane.

Boehm: Hope you had better luck than I did.

Utley: Yeah, really, and the weather here right now is pretty bad.

Boehm: Yeah, that's what it was yesterday.

Utley: Where did you get stranded?

Boehm: It's a long story. Is now a good time?

Utley: How long is it going to take?

Boehm: What happened was I left about 6:00. Everybody said it's no problem to catch the 7:25. There was a terrific traffic jam just north of the airport, bumper to bumper for miles, and it got to be 7:10 before I was at the airport. I was flying around lost, trying to find the Avis. Got to the bus at 7:15.

Yelled at the driver and said, "I've got a 7:25 flight. Can we do it?" He goes, "I don't know!" So we got in and tried it. They dropped me off at the United gate. And I dropped up the Avis car without filling it with gas, you know, just get my butt over there. I get up to the drop-off, and thinking, oh, I gotta run, and so I run like crazy to get to the get and find out different. There's a whole bunch of people standing there, you don't have to run. It's been delayed. So my flight out of Ft. Lauderdale to Chicago was delayed first of all for storms, and then mechanical problems. I got switched all over the place. 7:30, 8:30, 9:30, and you wonder what's going on. Half the people bail out and go to Miami and fly out of there, and they keep saying, oh, we don't know when it's coming. I'm thinking, oh, crap, I'm going to miss my 10:30 connection in Chicago to go to Milwaukee, so I called and found that there was a bus. There was an 11:30 bus, and I thought, hey, I'm gonna make this, no problem. The stupid plane didn't leave until 10:00, got in Chicago at 12:30, missed the bus, missed the only connection out to Milwaukee. I'm thinking the next one's 8:00 in the morning, I'll just go get a hotel, and it should be on the airline, right? Because they made me miss my connection. So I stood in line 45 minutes with other people who had missed their connections to try and get the hotel or the baggage lost or some damn thing. Here it is 1:15, 1:30, and they say...and this guy in line behind me, he's in line for the second time because they sent him in a cab off to a suburban hotel--not the Hotel Hilton, no way--some suburban hotel--sent him out there, he got there and there was no room, so they brought him back, and now he's in line again! Talk about getting doubly screwed. Anyway, I get up to the counter, and she says, well, we can send you out to Arlington Heights--and I know the area, I grew up around there--a hotel, and we've got to get you a cab, and we'll bring you back, and we'll pay for the hotel. And I'm saying, when's my flight? 8:15. I've got to be in there by 7:30. You're going to get me out there, and I would have gotten maybe three hours of sleep. It was just ridiculous. So I said, what are my other options? I'm pissed. So she turns around and grabs a pillow and a blanket and says here's your other option. Everybody is kind of fuming, but we're all taking it with a grain of salt. The guy next to me says, oh, you get the Hotel O'Hare, and you're headed over to Gate B-20? That's Suite B-20!

- Bernstein: And it is. I've done that so many times. Slept there many a night. Slept on my bag.
- Boehm: I got in here this morning, landed at 9:00, and drove to work at 9:30. I haven't been home.
- Utley: And you are feeling the same.
- Boehm: Oh, yeah, really crunchy!
- Bernstein: Okay, let me whip through this real quick. Skip the comment on top of page 9. On the bottom of 9, why can't these images from videos be put back into video format and then zoomed on? Why can't you take the images you captured in video, enhance them, and then put the 29-per-second back in, thereby have zoomable video? And panable? You can because a video is simply 29 images. So if we've captured the ability to do this on an image, we can create video by creating a series of 29 images per second.
- Boehm: Okay.
- Bernstein: It can be easily done. Here's the change. On line 21, just add: "A single or all captured frames from the video camera may be further processed as a digital image, and then reassembled back to video." Take all the frames, do...
- Utley: What are you going to do with it?
- Bernstein: You're going to enlarge them, however you do that once you capture them. If you were just printing them, you could print the images, enlarge them, put them in a viewing window, and run that video through there and let somebody zoom in.
- Utley: How do you run the video through a viewing window?

Bernstein: Doesn't the video have its own viewing window?

Utley: You run it through a player.

Bernstein: And the player has a viewing window.

Utley: And the player has a viewing window.

Bernstein: Now, if the image is bigger than the viewing window, you'll be able to...if the picture is bigger than the set viewing image, you'll still be able to...

Utley: The picture will still be in the standard frame size of 320x240.

Bernstein: They'll be in a frame size, but the picture will be much bigger than 320x240.

Utley: No, the picture can't be bigger than the frame size.

Bernstein: On a video? Why?

Utley: Because that's what you cover.

Bernstein: I see what you're saying. But would you be able to take a 20...no...and play them through...okay, scratch it.

Boehm: All this stuff at the bottom of the page?

Bernstein: No, left side.

Boehm: Just the left side?

Bernstein: And then still make the change on 21: "A single or all captured frames from the video camera may be further processed."

Boehm: But we're only talking a single frame is processed as a digital image.

Bernstein: So it won't matter if you do it multiple?

Boehm: Yeah, but you're doing single, multiple times.

Bernstein: Yes, okay, fine.

Boehm: Maybe we should say...no, single is fine. I think...

Bernstein: Is a scanning a digital enlarger to me? To my thinking?

Utley: Yes.

Bernstein: I just don't understand why?

Utley: Yeah, it's a digital...well, yeah, the way it is is you change the scan density. That will give the effect of the enlargement.

Boehm: Is that said here, Brian?

Utley: Yeah.

Boehm: Does that say that in here? That changing the scan density is effectively enlarging it?

Utley: It's enlarging it because you're increasing the number of files.

Bernstein: What you said, sir, because it confuses me!

Boehm: And not only that, we may need it. If we're practicing that...are we practicing that?

Utley: That was the whole point of going through the magnification factor and creating a scan density because you've got to create a picture large enough to be what you want it to be as a target image.

Boehm: Never mind!

Bernstein: Okay, but you see it now, right?

Boehm: Yeah, absolutely. I just didn't...

Bernstein: And to me, who doesn't understand the math of all that, it seems very strange that you can take a digital image and it's achieved everything by blowing up...

Utley: Optically.

Bernstein: ...optically. And then you're still putting it in the frame and framing it right until it works in a zoom environment. If I could understand the math, I'd understand that. I understand the theory.

Boehm: Brian, I know what I'm talking about.

Utley: I never questioned that! <Laughter>

Boehm: I do, all the time! No, when I'm thinking enlarging, I'm thinking of analog development enlarging.

Utley: Optically.

Boehm: Optically enlarging, not digitally enlarging. Are you digitally enlarging the photo when you up the scan density? No.

Utley: Let me give you the ...

Boehm: You're upping the scan density.

Utley: Yeah. If you enlarge a photograph, you can set it at a lower scan density than if you don't, then you have to scan at the high density to get the same result.

Boehm: Exactly. That's why I don't think that a scanner is technically an enlarger.

Utley: It performs a function. Because it has a variable scan density...

Boehm: Yeah.

Utley: Enlarging is better [in] the size of the file that is produced. And the size of the file is proportional to the size of the image.

Bernstein: Oh, I see. I see it! It has to be. It effectively does the same thing.

Boehm: Yeah, I guess the scanner can do enlarging, yeah.

Utley: It can produce two different-sized files based on the same photograph being scanned at two different densities.

Bernstein: Which is two different sizes. You see, the brain doesn't think that. You just think 600 versus 900 just means more dots or something. Period. It doesn't mean that you have more area.

Utley: That's right.

Bernstein: But is it?

Utley: When you have more area, you scan at a lower density. You scan at 200 DPI versus 600 DPI.

Bernstein: But what if there's no scan, no density...the camera does that?

Utley: Then it's fixed by what the camera does.

Bernstein: Can you set the camera to be the enlarger?

Utley: No, you have very little control over that. When you go through the digital example, that's what happens.

Bernstein: What?

Utley: You say, well, I got this digital picture, and I want to get a 20-times magnification, and you go through the math and it says "stop!" You can't get 20 times; you can only get 11.1 times.

Bernstein: Why?

Utley: Because you can't get more pixels in the target image than you've got in the source.

Bernstein: So how do you achieve 20 times?

Utley: You have to have better digital equipment.

Bernstein: Okay, so you can buy a better digital camera that gives you more [pells?] for the shot?

Utley: Right.

Bernstein: And as that comes due, that's going to give us greater magnification.

Boehm: Brian, if you took a normal enlargement on a photo, you will keep enlarging until you get the grain level of the photo.

Utley: Right.

Boehm: On a scanner, you won't keep enlarging...I mean, you're going to hit the grain level of the photo, but it's going to be limited by the scanner.

Utley: Well, yes, there are some limitations. For instance, ...

Boehm: An optical one is never limited by the optics, right?

Utley: Yes, optics have limitations.

Boehm: Okay, but way far...

Utley: But what happens is the scanner can't put detail into a picture where it isn't in the picture. So you can take a snapshot, for instance, and try to scan it at 1000 DPI, but it won't look any better than if it was scanned at 150 DPI because that's all the information there is on the image that you can resolve. In other words, you have been destroyed by the processes that printed it. But if you take a transparency—the original source transparency, whether it be a positive or a negative—you can scan that at a very high density, and you can get every bit of information that there is to be obtained by increasing the scan density assuming that you have a scanner that is capable of that.

Boehm: Yeah, with no limitations. Yeah, you're right.

Bernstein: So, should we say all of that?

Boehm: The math is saying it, you just have to sit back and think about it.

Bernstein: Okay, that's good.

Boehm: But you're right, it would be a good thing to say. If you could...

Utley: That's why the math is there.

Boehm: But Brian, if you could say that in English, it would be even better. If, after we cut the phone call, if you wanted to jot a note...

Utley: My brain doesn't work very well in English. <Laughter>

Bernstein: Do you want English American or English British? Let's define that. Let's go right here and define that because that is important.

Boehm: Okay, so what we're saying is that by increasing the scan density, it effectively...well, first of all, what is it actually doing? It's more data or pixels per image which lets you magnify deeper or more...

Utley: Let's back it up. What we want is a large enough...our objective is to get a large enough digital image file to permit the zooming and panning at the desired magnification to take place. There are two ways to obtain that size file. One is by enlarging photographically and scanning at a relatively low density, or by that the source image is of sufficient precision to scan at a high density to create the same size file.

Boehm: But, wait, you don't scan, if it's digital. If you have a digital, you're not...

Bernstein: Wow, you see, you've got to clarify two things: scanning and digitally shooting the photograph with the right specs.

Utley: When you scan, you create a digital file. Alternatively, you have a digital camera which gives you a fixed file size.

Bernstein: Although later in the future, you should be able to do inside the digital camera what you're doing with the scanner, and create, when you get a good enough [pell] count, so to speak, right?

Boehm: But it's technically not scanning, it's the digital files coming directly from the camera is what he was trying to get across.

Bernstein: But it's creating a size.

Boehm: What?

Utley: The end result is to have a file which is sufficiently large...the file of an image when expressed in [pells?] has a large enough area to allow you to zoom into the image and obtain the desired level of magnification.

Boehm: Without pixelating.

Utley: Without pixelating.

Boehm: Okay, that makes perfect sense. Now, when we were talking about a scanner being essentially an enlarger, if you...you see, when I think of a scanner, I think of analog to digital. It's taking optical and digitizing it. It's doing the capturing.

Bernstein: Right, but...

Boehm: On a digital camera, the [CCD] is doing the capturing.

Utley: Which is an array.

Boehm: Which is a scanner. I see what you're saying.

Utley: Right. It is a scanner. Now, the...

Boehm: The scan density number you're spitting out for your HP scanner or for to go buy a new proper...

Utley: No, you can control the scan density of a scanner. You can determine what your scan ratio is.

Boehm: Of a scanner?

Utley: Yes.

Boehm: But not of a digital camera yet.

Utley: No.

Bernstein: Sure. You can go from 300 DPI to 600 DPI.

Utley: Not on digital cameras.

Bernstein: Sure. On my digital camera, I can set it to 300 for low resolution, to high of 600.

Utley: Yeah, but when you do that, you're getting a .JPG.

Bernstein: Right. Or bitmap.

Utley: It doesn't give you both bitmaps. I think it only gives you one bitmap, which is your maximum density.

Bernstein: Well, the highest, 600, is a bit map; the other one is...

Utley: Right. The other one is a .JPG. That's right. That's absolutely right. But there's only one bitmap. You can only go to one bitmap size now. Even the new Nikon 990, it only gives you one size bitmap.

Bernstein: It does?...

<End Side 1, Tape 2; begin Side 2, Tape 2.>

Missing huge section

Utley: You said in the compression step, there are a number of options that you have to tailor the compression process. You can give the compressor a target for how much compression you want. You can also specify to the compression program the size of the compressed image, and that's important because what you do with the image sizing program, the image sizing program will tell you what the size of the compressed image should be to create the target image. Therefore, you instruct the compressor to create a compressed image of that size. Remember you had a minimum scan density?

Boehm: Um, hum.

Utley: Typically, you will scan at a higher density than the minimum scan density, maybe 10%, maybe 20%. So now you have to take that digital file and create a file which is equal to the target image, and you do that by telling the compression program that's what you want. If you didn't have a compression program, then you would try to scan as close to the minimum scan density you could so as to not create a bigger target image file than you needed.

Bernstein: Okay, now, I didn't totally understand that. He then says compression serves to preserve image resolution. Is that a true statement?

Utley: Um, hum.

Bernstein: Thereby providing an optimum enhanced digital image. Optimal is no compression.

Utley: Well, it depends on what you mean.

Bernstein: Well, did you see the...17 going to 18?

Utley: You made the optimizing file size.

Bernstein: But then that needs to be defined here. Do you follow that, Doug?

Boehm: Yeah.

Utley: By optimum, we really mean optimum file size here.

Boehm: Yeah, since the number of pixels is not actually reduced.

Bernstein: No, actually if you size it, they are reduced.

Utley: If you specify a small number, yes. What you really try to do is optimize the file size at the appropriate number of pixels.

Boehm: But the number of pixels changes when you .JPG it...I mean, when you compress it or .JPG?

Bernstein: No, when you compress it and resize it.

Utley: It's optical.

Bernstein: If you're compressing by resizing, you've lowered the pixel count. If you're compressing 1:1, you haven't. Do you follow? So Brian's saying you might have a large image and the compressor says, what do you really need here? Let's get rid of some color. Do you need all this extra size and that height and width? And if not, it does all that for you. Lowest makes the smallest picture, thereby reducing pixel count and providing a less-than-optimum enhanced digital image.

Boehm: Help me figure out what that sentence should say.

Bernstein: I'd strike the whole sentence, to be honest with you.

Boehm: That sounds fine with me. Will we ever need the concept that we preserve the number of pixels, at least at the 1:1?

Bernstein: No.

Boehm: Through compression?

Bernstein: No. Compression is optional. Do you know what I mean?

Boehm: Okay, scratch the damn sentence.

Bernstein: Yeah, okay. Good. I see that we can explain all of this. I would just leave it right after "...be set to other compression factors..."

Boehm: Yes, absolutely. That's the end of the sentence, end of the paragraph.

Bernstein: Exactly. That "64 user interface or control data is associated with enhanced digital image file if necessary and may already be on the user computer."

Boehm: You got it.

Bernstein: It's still associated, even if it is on his computer, so that, in this sense, you might be right here, because you still need to associate the control data user interface with the picture. So that's true.

Boehm: So I'll move your comment down to clarify it later.

Bernstein: Okay. And the only other thing is right after you say on line 6: "...graphic user interface on display upon loading..." Forget "downloading" and just put "loading of the image."

Boehm: Okay.

Utley: Doug, I can give you the wording that I used. At the bottom of page 17, in place of that last sentence which spills over it, I said, "The target image dimensions can be set as parameters for compression thus ensuring an optimum enhanced digital image."

Bernstein: One more time?

Utley: "The target image dimensions can be set as parameters for compression, thus ensuring an optimum enhanced digital image."

Boehm: But what are we optimizing?

Utley: File size here.

Boehm: The file size?

Utley: We're getting the maximum image quality and minimum file size.

Bernstein: For what we need to achieve. That's right. That's fine. Because that's here...

Boehm: "...thus ensuring optimum quality and file size"?

Bernstein: You're not ensuring any optimum qualities by compressing. You're actually decreasing quality at that point.

Boehm: That's right. So, "...thus ensuring an optimum compressed file size"?

Bernstein: Yes. "...compressed file to image size," right?

Utley: No, file size.

Bernstein: And that does say it, by the way. Okay. Now, go down to line 8: "Image file []. The user interface program is associated with the enhanced digital image file such that the combined"...take "download" out...

Boehm: Okay.

Bernstein: "...the combined file or files..."

Boehm: Well, it's not combined if it's files.

Bernstein: Well, no, it could be three files, or it could be all packaged into the image file someday. We don't know.

Boehm: Well, I've got to define that better when we hit the claims because I'm thinking about not...we're claiming that we're...that the end product is a file, an enhanced file, and then we get lost in the mucky-muck when we say what we are really providing. We're providing a .JPG and an applet.

Bernstein: Well, we don't have to provide...they just need to combine somehow. We don't need to provide all the elements.

Boehm: Yeah. The ultimate thing that we provide may not be a file--an enhanced digital image file--does it have to be a file?

Bernstein: An enhanced digital signal?

Boehm: Data?

Bernstein: Data?

Boehm: Or signal.

Bernstein: Yeah, okay, so make that global change. That's fine. It doesn't have to be a file necessarily.

Utley: No.

Boehm: Well, it would have to be digital data, though.

Bernstein: Right.

Boehm: It doesn't have to be an analog signal.

Bernstein: Right. That's true.

Boehm: So I don't need the word "signal."

Bernstein: But you might not have to save it as a file at some point in life.

Boehm: Well, data incorporates if it's a signal or not because the data would be on the signal, right?

Bernstein: Perfect.

Boehm: So I don't need signal because I don't want to go analog on people.

Bernstein: No, I understand. "The combined files, like computer [], will automatically launch the graphic user interface.." It doesn't have to automatically, but it can.

Boehm: Okay, "can."

Bernstein: Right. "...decompress the digital image data and display a portion of the digital image data within a viewing window having a predetermined viewing size."

Boehm: Okay.

Bernstein: Correct? Putting in a portion of the data.

Utley: Actually, when it comes up, it tries to present the whole image.

Bernstein: But in those virtual tours.

Utley: That's right.

Bernstein: So we want to say "a portion of," or "the entire or a portion thereof."

Boehm: "...at least a portion..."

Utley: "...at least a portion..."

Bernstein: There you go. Okay. Skip now to the next page. You've got my seamless word there, but I don't want it.

Boehm: Don't want seamlessly, huh?

Bernstein: Doug, but you say "...to or from a host computer..." on line 11 "...a Web server, Web site, or a Web page...."

Boehm: Um, hum.

Utley: TV?

Bernstein: I don't know if you want to throw it in there.

Boehm: I'm lost where we are in terms of...

Bernstein: Page 19, 11.

Boehm: We're at figures 3, describing the flowchart of figure 3?

Bernstein: Right.

Boehm: Which is what...oh, great. Is that what that says? Oh, it's not a flowchart, it's an image...figure 3 is an image. <Reading out loud to himself; quickly and maybe not completely.> "Referring to figure 3, an exemplary screen print is this. Once the user interface...the resulting image is ready for uploading to a network server projection..."

Bernstein: Well, that was not my thing. "...the resulting image can be uploaded to a network server..."

Boehm: That whole thing, Eliot, on that, you kind of have to take it with a grain of salt because all of the...this is the description of the preferred embodiment.

Bernstein: Okay, okay.

Boehm: It's like the background.

Bernstein: That's what we did. That's fine, that's fine.

Boehm: This is really preferred.

Bernstein: I know, you see what I'm doing now?

Boehm: Yeah, and that's good because that makes me want to support it more so I can broaden the claims...go somewhere with the claims. So technically, Steve's correct by saying "uploading" because it's his-preferred embodiment.

Bernstein: Right.

Boehm: But I usually say "can be" or "is" or "may be," and he doesn't like to say "preferably," but I do. It's just a semantics.

Bernstein: No problem. Go down to line 19, "...and it should be the result of a download/upload..."

Boehm: What's being...

Bernstein: "...the results of loading the enhanced digital image to a user computer..." would be the right way to say it.

Boehm: Yeah.

Bernstein: So take out the "down" and trim it to "loading."

Boehm: Yeah. The same thing to the network server. If you load it to the computer 22, it's providing it to a network server. I don't like this loading...

Bernstein: Yeah, I don't. It's very tight on us.

Boehm: Yeah, and it infers uploading and downloading.

Bernstein: I agree.

Boehm: But, again, he's right because in the preferred embodiment...

Bernstein: That's fine as long as later we clarify and make sure we're protected on all of these issues.

Boehm: <Reading out loud to himself.> "...but download of the enhanced digital image file to a user computer..."

Bernstein: And that's true in the preferred embodiment...

Boehm: But that's for load over the Internet is what he means.

Bernstein: What?

Boehm: He means download off the Internet.

Bernstein: It could be an intranet. It could be...

Boehm: The network. Off the network is what he means.

Bernstein: Right.

Boehm: But isn't it a download off the network? Because when you put something on a network, you upload through the network and download from the network. So he's right, but...

Bernstein: Yeah, you see the issue.

Boehm: Okay, it doesn't have to be. I agree.

Bernstein: Okay, and I've got that next one covered. Go now to page 20. Okay, we've got a big problem here. "The program loads additional digital image data from the enhanced digital file..." Scratch "image stored in memory, for example hard drives," and just say, "program loads additional digital image data from the enhanced digital file to the display viewing window by providing additional data from the source to the viewing area seamlessly..." or something. Or just make it a period after "...display viewing window." You follow me?

Boehm: Uh, huh.

Bernstein: "...to the user display viewing window."

Boehm: "...viewing window." Period.

Bernstein: Okay, any of that other stuff. Okay.

Boehm: <Reading out loud to himself.> "...the user computer provides the zoom..." Oh, "to provide the zoom to view..."?

Bernstein: Excuse me?

Boehm: Holy smokes. Wow, the paragraph starts out in figure 4, which is figure 4, take a look at, we're about ready to zoom or we have zoomed. He has, "The user has actuated the zoom buttons to zoom in to the digital image data..."

Bernstein: What line are you on?

Boehm: Page 19 at the bottom.

Bernstein: Line what?

Utley: The bottom part.

Boehm: Figure 4. "The user has actuated zoom buttons 88 to zoom into the digital image." Period. I don't want to say "data," right?

Bernstein: Right.

Boehm: "In response, the user interface program, which is the applet, loads additional digital image data..." Eesh, I don't like the "loads" because that says it might be loading it off the network.

Utley: Yeah, I don't either.

Bernstein: "The digital program..."

Boehm: "Provides"?

Bernstein: Yeah, because it's providing it from the enhanced digital file.

Boehm: "From the enhanced digital image file..."

Bernstein: Right. "...to a user's display viewing window."

Boehm: And then, "2. Provide a magnified view of the digital image" or "zoomed visual..." I don't like the word "zoomed."

Bernstein: Yeah.

Boehm: What I would like to say is, "Provided additional image data from the enhanced digital image file, without..." I want to make the clarification there that...

Bernstein: "Without additional ..."

Boehm: "Without another download from the network"?

Bernstein: No.

Boehm: We may not need it here if it's there before, but that's my...I may have to...

Bernstein: Put a question mark there because I see it, too.

Utley: Why can't you say...why can't you relate it to your resolution: "Provides additional image resolution data" because you're improving, increasing the resolution of the image.

Bernstein: As you zoom.

Utley: As you are zooming.

Bernstein: That's actually a great way to start the whole damn thing!

Boehm: Now he tells me!

Bernstein: No, but what we've been looking to describe, he just...

Boehm: I agree. Steve and I have this battle too because you guys weren't...

Bernstein: Struggling.

Boehm: Consistent in the terminology either. No, I agree. If you're talking length times...numbers of pixels, that is resolution.

Utley: So you're providing additional resolution data.

Boehm: That doesn't sound right to me, Brian.

Utley: Well, what you're doing is you're taking a portion of the image and you're expanding it, really, with additional pixels. So that's additional resolution data.

Boehm: Oh, I see.

Bernstein: Right.

Boehm: What you're saying is it's an adjective...it's digital data that has an image encoded with enhanced resolution. What are you providing? You're not providing resolution, you're providing data.

Bernstein: Data evaluation, necessary for the resolution.

Utley: But it's pixel-based data.

Boehm: And since it's pixel-based data, it will...

Bernstein: Or additional data for higher resolutions.

Boehm: Yeah, you're getting warm.

Utley: See, what's happening is that, to put it in discrete terms, you're going from a case where you have many source pixels per viewing window pixel, and you're reducing that ratio as you zoom in.

Boehm: Right, until you hit the pixelation limit.

Utley: Until you hit 1:1.

Boehm: Yeah. Okay, let me see if I can patch that up.

Utley: That's why you are providing additional...

Boehm: We've got a lot of clean talking about to do, so let's move on. Line 15 now, page 20.

Utley: "...greater than two times."

Boehm: "...It is important that the digital camera is configured to acquire a digital image. In this step, the camera is..." I would say, "...preferably set to the highest resolution."

Utley: I think in principal, that's what we would intuitively do; but essentially, should be generalize on that?

Bernstein: Yeah, there'll be variations on that.

Utley: Because as technology evolves...

Boehm: Right. You set the camera to acquire at least enough pixels to magnify...

Bernstein: For the magnification process.

Boehm: But if it's high resolution.

Bernstein: Right, then you get more, even if there's higher resolution available.

Utley: You see, we don't have cameras that give us very much flexibility here today, but tomorrow we'll have more flexibility.

Boehm: "...In this step..." it's possible the camera is set to acquire? "...at least enough pixels..."

Utley: Well, you notice that the camera []. The camera has a storage device. It always takes the same number of pixels; it's what it stores that counts.

Boehm: Does a user have any clue of what that is? in other words, how would I know that my camera would do a magnification of 20 on this file?

Bernstein: You don't.

Utley: What it tells you is you create a high-resolution picture or a low-resolution picture, and if you set it to high, you'll only get a few pictures for whatever your storage medium is.

Bernstein: But I'll be you later, the camera will come out with a dial-in-your-zoom feature. Boom! It'll size it and appropriately....

Utley: In fact, they're already saying if you set it at this setting, it's equal to an 8x10; and if you set it to this setting, it's a 5x7.

Bernstein: Which is doing what we're doing.

Utley: That's already happening.

Bernstein: Right, well catch them, because I doubt it was happening in the past.

Utley: It wasn't.

Bernstein: Right. So it's new camera technology that might be infringing already. Which, you know, I see it going in the scanner...all these things.

Utley: You know, sooner or later, Brian, if what you said yesterday was correct, that this is all new, the ability to do it, we'll probably get every single facet of imaging that you know have a zoom factor. Why wouldn't you apply it to every facet?

Utley: Um, hm.

Bernstein: Okay.

Boehm: We could get tripped up, though, since I'm not an expert in the camera art. It might have been done on purpose; and if our claim reads on it, ...

Bernstein: Okay, but what if it was done for a different purpose, and we have a different purpose?

Boehm: If our claim reads on what was done, and it was...

Bernstein: So it wasn't done because I mean...

Boehm: Our camera will already have the capability of providing this file, and our claim says "providing this file," we're in trouble.

Bernstein: So optionally do it. Make it dependent.

Boehm: My secretary is saying we've got to get the checks today.

Bernstein: Okay, but definitely cover that because that's what's going to happen.

Boehm: In the future to set the camera.

Bernstein: No, it's happening. According to Brian, it's happening right now as we speak, so definitely get it in here.

Boehm: "...set the camera, if possible, to the desired magnification or scanned density."

Bernstein: Correct. "...to create that maximum zoom factor." Okay, claim 1, we dealt with.
Now "providing" on line 2, we're going to make this a dependent claim now?

Boehm: I'm sorry, I lost you again.

Bernstein: I'm on page 24, claim 1, third paragraph of it, "...providing..."

Boehm: Did he skip some more math, Brian?

Utley: Beg your pardon?

Boehm: Did he skip some more math?

Utley: We just skipped over it. We've already done it.

Bernstein: I've never had to grade Jim and his math. Nor Brian's. I've got to tell you, I'm
very impressed with Brian's whole grasp of the situation of the math here.

Boehm: Oh, the analysis is great.

Bernstein: It's incredible. It helps me understand it.

Boehm: Are we on 22, Eliot.

Bernstein: We're on 24.

Boehm: On 22, do we not worry about...oh, these aren't your scribbles, okay. I'll play
with that. 23?

Bernstein: 24.

Boehm: 24. Got it.

Bernstein: Get rid of the "...size at least twice..."

Boehm: Yep, we'll do the "...greater than..."

Bernstein: "Providing" on line 8 becomes a dependent claim.

Boehm: Right.

Bernstein: Why do we have 10 times 100 times?

Boehm: Because if, again, the Prior Art happens to do it at two times but they do it...

Bernstein: Well then you should do 10, 11, 12...

Boehm: Our claim 1 is gone.

Bernstein: But then you should do 10, 11, 12, 13, 14, up to an infinite number.

Boehm: No, and here's the theory, and this is how dependent claims work, and here's the
analysis that we go through. If claim 1 now says "greater than one," if
anybody is doing it at greater than one, then claim 1 will fall. It's
dead.

Bernstein: Okay.

Boehm: If anybody's done it before, your priority date's before you. Now we move to claim
2. Has anybody done it at least ten times or at least twice will be my
next claim.

Bernstein: Right. Ah, that's where you get your "at least twice" in here.

Boehm: Exactly. If the guy didn't do it at least twice, was there a good reason? Did he
really not have the same invention? Well, hell, yes, he didn't have the
same invention.

Bernstein: That's right.

Boehm: But it just so happened that he did more than one. My claim 1 is dead, and I can now jump to claim 2, which there are at least.

Bernstein: Got ya.

Boehm: That's how dependent claims work. That's why I have dependent claims there because you can't modify claims once they're issued.

Bernstein: Right.

Boehm: The reason why Steve had all those goofy 100s, and 200s and 300s in the spec...

Bernstein: Right?

Boehm: Is because during prosecution, we have them in the claims. And if the Prior Art comes out of the woodwork during prosecution, you might have to go say, oh, well, we didn't mean that, we meant above 100 or above 200.

Bernstein: Gotcha.

Boehm: It's pretty important.

Bernstein: Claim 6, "A single data file to be two files, three files, four files..."

Boehm: Right.

Bernstein: Why?

Boehm: Well, I like that claim.

Bernstein: Well, it could be in the digital image file, I like that, but it could be two, three, or four.

Boehm: But without the claim, ...

Utley: It says you have now to literally [] everything into a single file...

Bernstein: One file.

Utley: ...and you hold that patent.

Bernstein: Oh.

Boehm: And you see, claim 6...

Bernstein: <Talking in background to Utley.> He's got it in one file.

Utley: Right.

Bernstein: [] an image file with an applet built into each.

Utley: I'm on that path.

Bernstein: Beautiful.

Utley: If I had some time to work on it.

Bernstein: I got it. <Laughter.> Is the method of claim 6—we're in the user interface—a Java applet? Why limit it to Java? There are other forms that do this.

Utley: It's already in there.

Bernstein: Where?

Utley: It says in the first claim.

Bernstein: Okay, "...providing a..." which is now going to be a dependent claim.

Utley: It's "...providing the user interface continues to display..."

Bernstein: Okay, which is dependent on it.

Utley: It then further says, okay, and it may be a Java applet.

Bernstein: Right. Okay.

Boehm: Which sort of narrows it up.

Bernstein: Right. Okay. There are other things we could name there—plug-insurance, acrobats.

Boehm: It's only limited if you enforce that claim and if the guy infringes that claim.
If it's not a Java applet, this claim won't do you any good. If it is a
Java applet that the infringer uses, then you get to not only throw two
claims or three claims at him...

Bernstein: What if it's Active X?

Utley: Yeah, Eliot brings up a good point. There's another technology, which is called
Active X...

Boehm: Wonderful.

Utley: ...which already works with Windows, but...

Boehm: But the idea about...can you genericize that to say it's a data code segment?
What's an applet? It's a small applications program, right?

Bernstein: Right.

Boehm: Well, let's say that.

Bernstein: Okay.

Boehm: Or we could just say an applet.

Utley: You could say Active X...

Bernstein: Java applet, Active X applet, or other...

Utley: You want a separate claim. Each one should be a separate claim.

Bernstein: Right.

Boehm: What I have to say is "...when the user interface is one of the following, Java or
Active X."

Utley: Or "other."

Boehm: No, I can't do "other."

Bernstein: Can you do "other" in a new claim?

Boehm: Nope. The word "other" is invalid in a claim.

Utley: <Inaudible comment.>

Bernstein: In frame 1 because the [] user interface.

Boehm: Yeah, other claims have...

Bernstein: Okay, that's perfectly fine. In that "...further comprising, compressing...",
that's optional, right?

Utley: Yeah.

Boehm: Everything here that's dependent is optional.

Bernstein: Okay. "...to a network server..." how about "to a set-top box"?

Boehm: Is that worth a separate dependent...

Bernstein: Absolutely! It's one of the raging things coming down the pipes.

Boehm: Okay, "...set-top box." Can you give me an example of a today technology set-top box that this will work in, and then tell me on figure 1...

Utley: We just happen to know there's development activities going on in a number of different of companies, and they're heading in this direction.

Boehm: Yeah, but your claims have to be buildable by somebody with ordinary skill in the art. Set-top box...

Bernstein: That's just a display system.

Utley: Web TV in an example of a set-top box.

Boehm: Oh, okay, that's right.

Utley: A set-top box that takes streaming information and then presents it on a TV screen.

Boehm: So what's the cable box sitting on my mom's TV? It's just a cable box that goes to the VCR on your TV. That's not a set-top box?

Utley: That is a set-top box. A very simple one.

Boehm: Yeah, it doesn't have a display on it. It uses your TV.

Utley: It uses your TV, but the newer ones all have computers in them and memory and can convert different formats.

Boehm: Right, but the set-top box itself doesn't have a video display.

Utley: No, it uses the TV as the video.

Boehm: Yeah, which is Web TV.

Bernstein: So to put in a TV claim.

Boehm: I don't have time to go look at claims right now. We're going to be crunched to get this on file tonight.

Bernstein: Okay.

Boehm: Okay. So my question, again, can you give me an example...you did, Web TV. It's a set manufactured by who? Or is it in there already.

Utley: Microsoft has a Web TV. And Dell had a Web TV; they just pulled it off the market. But Web TV is a primitive form of what's coming.

Boehm: I know, but you can't patent what's coming unless you can give an example of what you can build today,.

Utley: Web TV.

Boehm: Good. And I wanted to find out where that was in. Do you remember? I'll find it later.

Bernstein: Okay. Page 26, lines...

Utley: I'm not through with this one.

Bernstein: Okay.

Utley: Back to the mid area again. "The advantage of claim 1 is it applies to enhanced digital files which are not compressed." We have to make a provision as a dependent claim for transmitting over a network because the one that provides for transmitting over a network is tied to a compressed file.

Boehm: True, but what Steve is doing here in claim 8, there's the compression hanging on claim 1. Now if you do a compression, you can throw claim 8 and claim 1

and them. And if you upload it to a network server, now you can throw claim 9 and 8...

Utley: As long as you don't...

Boehm: if it's on a network server, but it would have to be compressed then. Oh, this is the one you talked about before.

Utley: Right.

Boehm: I'm sorry. So you need number 9 dependent on 1.

Utley: Right.

Boehm: Thank you. That's what we talked about yesterday.

Bernstein: That was it? <to Utley> Okay. 26, line 6,

Boehm: Of what claim?

Bernstein: 13.

Boehm: Line 6 of claim 13...oh, the "...least twice...

Bernstein: ...greater than."

Boehm: Okay. I don't remember...do we have a picture claim, meaning an independent claim that's fairly narrow that reads on your preferred embodiment in your product? We should because that's maybe what we have to go with because now that we've...here's my thinking...and this, Steve and I discussed this ad nauseam here. We're going to go with claim 1 in the EPO. The reason is we're filing a PCT application now and a U.S. Claims are cheap and free—not free, but they're cheap—and they take multiple claims in the PCT and in the U.S. But when we split to Europe, they don't like multiple claims. They will give you one apparatus and one method only if they are related. So we basically pick our best independent claim, but not all the time your broadest, believe it or not because they may find something that is...since you can't...how do I explain this? If you have your best claim...our claim 1 now is kind of reaching over our product that we really know we can...that we're comfortable with what we can get, and your product with what you can get right now is too narrow because somebody can modify it. What I usually do in Europe is go somewhere in the middle to get something that's broad enough to cover your product but still in a real-world application and not trying to claim the world because you don't get that much leeway to amend in Europe.

Bernstein: Is this to the "...least twice versus greater than one"?

Boehm: If there's little or no chance that an infringer is not going to do at least two, that will buy you...

Bernstein: There are chances that it might be.

Boehm: But what's the chance that Prior Art is going to come out of the woodwork...

Bernstein: None because...

Boehm: No, there's very good chance that Prior Art's going to come out of the woodwork and blow all of it...

Bernstein: Between 1 and 2?

Boehm: It's possible.

Bernstein: Well, that's what I'm saying, if that's the case and somebody else beat us to the punch, we should have a claim that takes us all the way from "greater than one." You don't want to box me into that statement; just make it as a claim.

Boehm: Okay, so you're saying that we would file the broadest idea in Europe? Well, we'll discuss that later when Europe rolls around.

Bernstein: Okay.

Boehm: That was why I did...the practice is to do different claims of varying scope and different formats.

Bernstein: Okay, on 15-claim 15-"moving"...is that panning?

Boehm: Yes.

Bernstein: Okay. [Plurality] Jim didn't like that because it means at least two.

Boehm: Jim didn't like it?

Bernstein: Yeah, that's his note. Yeah, absolutely, and that's what it means. That's the whole point of claim 16, which is dependent on 14, which is dependent on 13. Are you with me?

Bernstein: Yes.

Boehm: You're down in the mud now, and plurality may be thing that saves your butt.

Bernstein: Okay.

Boehm: Because your product does these, right?

Utley: Yes.

Boehm: Your preferred embodiment product does these.

Bernstein: Okay. Then my only last question was, can you throw something in to cover the game world? That specifically relates to gaming and flight simulation?

Boehm: How would we do this? In figure 1.

Bernstein: You'd be able to now use games differently, and you differently can use flight simulators differently.

Boehm: Okay, look at figure 1, Eliot.

Bernstein: Yep.

Boehm: What changes? Just the definition of what 28 is, right?

Bernstein: Figure 21, the display monitor, the display system is what you're saying?

Boehm: No, no, no. Figure 1. What changes when you go to games and flight simulators?

Bernstein: Because in those, the displays become now dependent of parameters of the game or the flight simulator that drive the display window.

Boehm: That's fine, but there's nothing structurally here that changes other than the user computer. It has now the flight program or the game program on it, right?

Utley: What happens is the user interface actually becomes an application-driven interface.

Bernstein: Right.

Utley: That's probably the key difference. And the question was, can we convert that user-driven interface to an application-driven interface?

Boehm: Meaning like a flight simulator program?

Bernstein: Absolutely.

Utley: So that what is displayed is under control of the program and not under control of the user.

Bernstein: Right. Because, you see, you don't want the pilot maybe to be able to do a nosedive. You might want him to be flying along and have a program that says...shock him, make him dive...

Utley: Well, with all the graphics, that the program knows where he is, and therefore moves the display according to where he is and what he's doing.

Bernstein: Right.

Utley: So it's...

Boehm: But under the control of the computer application of its own as opposed to...

Utley: Right.

Boehm: I see. So basically, it's not a network anymore. It basically doesn't fall into figure 1.

Utley: Well, it...

Bernstein: Figure 1 better not tie me to a network.

Boehm: Figure 1 ties you to a network as your preferred embodiment. This'll be probably what's on your...

Utley: It doesn't matter whether it's on a network or not.

Bernstein: Okay, as long as that's true, that's fine.

Utley: What we want is to make sure that what we call the user interface in here can also be a computer-based application interface.

Boehm: Okay, in order to do that, we've got to stick a claim on it or we have to put support in the spec now to do that. So what would we do? All I see that we'd do is...

Bernstein: You could broaden user interface.

Boehm: Yeah, we'll broaden the definition of user interface in the claim.

Bernstein: And then I'd throw in a quick claim that says those two things as examples of it.

Boehm: Good idea.

Bernstein: And we'll let you get to re-writing.

Boehm: Hang on a second...don't go away. "...broaden the user interface to have a control of either the server competitor or the user computer." Right?

Utley: Right.

Utley: And when we do that, that really then lays right on top of that disclosure that I made that we had talked about because what one of the items that I wanted to accomplish was to be able to control the display from the computer itself, or from an application, rather than from the user. Remember that?

Boehm: Yeah, sure. And in this example, the flight simulator application program would control the zoom and pan of the display?

Bernstein: Yes.

Boehm: That means you still provided a digital...claim 1 would still say that somebody at sometime provided digital image files for viewing on a computer...

Utley: Yes, right.

Boehm: So claim 1 would catch that.

Utley: Claim 1, as long as the user interface can be expanded to include a...

Boehm: Either a downloaded applet.

Utley: A program interface.

Boehm: Any program.

Bernstein: Right.

Utley: Right. And we won't have to say where the program resides.

Boehm: Yeah.

Bernstein: Yeah, because definitely in this world, gaming wouldn't know where to put it because now multiple users can access one central game.

Boehm: Great thought, guys.

Armstrong: Always save some of it for your last-minute work.

Boehm: Yeah, yeah. Well, I've got an hour. That's all. Brian, let's talk about the definition of force target and all that other garbage because I got confused in there, Jim got confused. It's in the specs...Steve did that. Do you know what page it's on because it's all over my desk.

Utley: Yeah, it starts at...

Bernstein: Okay, Doug, I'm done, right?

Utley: Yep.

Bernstein: Can you send me a copy of that? When do you think you'll be sending out a final copy?

Boehm: What is your...it's going to take me hours now.

Bernstein: I know.

Boehm: Worse case, I would say I could send you a draft at 8:00...something like that.

Bernstein: Okay, perfect.

Boehm: Now, are you going to be there today? Mail it or what? I could email it to you if you want. That would be easiest.

Armstrong: Then we're going to need some prints, right? Some signed copies?

Boehm: No, all you have to do...

Bernstein: Is verbally.

Boehm: All you have to do is [] that this is your invention; and when you go to read it the second time and sign the declaration, that you won't make any changes to the spec, and that was your invention the date that we filed it.

Utley: You can send one to me at my home.

Bernstein: And send one to Jim.

Boehm: But do you guys want another pass tonight.

Bernstein: Another what?

Boehm: Another pass at it. Do you want to re-read it?

Bernstein: I do. I absolutely will re-read the changes. I'll have Jim re-read them, and by 9:30 hopefully we'll be done reading it and be done.

Boehm: Okay, I'll see what I can do to push this through then.

Bernstein: Cool. Hopefully it'll just be a re-read and we'll say it's right.

Boehm: Yeah.

Bernstein: Because if something jumps at us...

Boehm: How do I get it to you? Do you want me to fax it? I want to email it. That's quicker for me.

Bernstein: Great, email it.

Boehm: To whom? Where? When?

Bernstein: Eliot@iviewit.com, brian@iviewit.com, and jim@iviewit.com.

Utley: No, send it to me at...<end of tape>

Transcription of Patent Meeting
Conducted August 4, 2000
Participants:
Eliot Bernstein, Jim Armstrong,
Brian Utley, Steven Becker, Simon Bernstein
Docket 57103-120

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified.

Armstrong: Are we aware of all the important dates I know you probably are, but are we +
+Brian made aware of all of our deadlines and contingencies relative to
those deadlines + that we that we're not left with...I was a little
surprised that a final pack that's been in the works for a year, and I
know you weren't involved for a year, but in the works for a year required
that Eliot and I spent the entire night and morning reviewing it in order
to get it done.

Bernstein: What bothered me about that as well is that we'd go through the math, and then
suddenly you have a document Brian sent you several days earlier regarding
the math that has a bunch of changes in it, and none of that's in there. I
mean, I don't understand that.

~~Becker~~Armstrong: ...was changed from that document anyway.

Boehm: Yeah, it was changed from that document anyway. I was working with Brian, who I
thought was the master of that math, but...

Bernstein: But he had sent you an updated ~~map~~ math three days earlier that didn't appear in
the final document that we were trying to...

Boehm: Okay, I don't know. Steve was handling that. I don't know whether...you know,
Steve says he did put it in there, but then I don't...

Bernstein: But then we go through the document that we're filing, and it's not there.

Boehm: Okay, but we were on the third draft when I took it over. You guys had
opportunities like crazy to...

Bernstein: But that's the thing. Brian had sent it to you earlier, and it still wasn't
appearing in final drafts.

Boehm: If that's true, then something crossed in the email because Steve said he put it
in there, and maybe there's a piece of the math missing between the
crossing the emails. You're right in terms of...

Bernstein: Is Steve there?

Boehm: I don't know. He probably is.

Bernstein: And then my other question is quite a simple question my dad asked about
electrical engineers being mathematicians and said, "Didn't they sit and
pencil out the math of all this themselves?"

Boehm: Uh, huh. Here's what happened on that. Steve was filling the application. We
worked with Brian and you, Eliot, on the application. In some of the
letters and emails he said that he doesn't understand the math.

Bernstein: I'm not getting any of those.

Boehm: Huh?

Bernstein: I'm not getting any of those emails.

Boehm: Well, then, talk to Brian because we were corresponding with Brian on that, and I don't know why you weren't getting it if that was the case, and I don't know which letter went to who, blah, blah, blah, but I do know that we mentioned that we didn't understand the math, and we were up to the third draft, if I recall; and you're right, Jim, that it shouldn't have taken...it shouldn't have been last minute and you should have had time to do it. I totally agree, but I can't take total blame for that...

Bernstein: But wait a minute. Steve has fundamental errors on understanding the math, and yet we're going to file it with him having math problems?

Boehm: It's your duty to either help us to understand...

Bernstein: But then I've got a point. We did help you. We sat on the phone for an entire day, walked through this...

Boehm: The day of the filing you mean?

Bernstein: And if this math is still wrong, I mean, there's something really fundamentally wrong here.

Armstrong: Let me check it again.

Bernstein: Yeah, let us call you back in a while. Is Steve in today, too?

Armstrong: I didn't get involved until Wednesday.

Boehm: Right.

Armstrong: I'll tell you one thing, Doug, that you should do as just a matter of course going forward. Eliot being the owner of the company and the person that Brian reports to is any future email correspondence should always be copied to him. That's kind of just a standard practice we all do in the company.

Boehm: To copy?

Armstrong: Yeah.

Boehm: Okay. I didn't know that.

Bernstein: You ask me to review and sign these patents, and you're not sending me information. What do you mean.

Armstrong: I think had we known that there was a question of validating Brian's math, Eliot would have brought me in a lot earlier.

Bernstein: I would have brought a mathematician in. I mean, this is ridiculous.

Armstrong: Yeah, I'm just a friend that's good at math, not a mathematician.

Boehm: Right, well.

Armstrong: Go to your meeting. We're going to check this patent ~~stats~~-out, and we'll talk to you letter.

Boehm: Well, you've got to talk to Brian, too.

Armstrong: Yeah.

Bernstein: I think because I now seriously have to report a lot of things to a board of people that we're going to have to have a meeting at some point either today or Monday with a few of the key people in the company who are investors, etc., so that they understand what they are investing or not investing in.

~~Becker~~Armstrong: Don't jump to conclusions.

Bernstein: No, I'm not, but if this is correct, we've got some fundamental things that need to be discussed.

Boehm: If what's correct?

Armstrong: If he's correct about the math being wrong, but let's check it...

Boehm: No, I'll bet we could get a good patent if the math is totally wrong. I think we're barking up a tree here that's not a big wall.

Bernstein: But wait a minute. The question is if it still remains wrong and we gave you the right changes, it should have been filed right. All the sudden I'm left with a patent that...

Boehm: Okay, talk to Brian.

Bernstein: I will.

Boehm: Brian gave me the right changes. I filed what Brian gave me.

Bernstein: Okay.

Armstrong: Okay.

Boehm: And I don't mean to...you know...yell out of that, but that's what happened.

Bernstein: That's no problem. I totally hear that.

Armstrong: Thanks, Doug.

Boehm: Okay. Talk to you Monday.

<Hang up phones.>

Bernstein: 8/4/2000. 8:30 Doug Boehm conference call. Jim Armstrong, Eliot Bernstein. Steve, Jim, everybody, I'm taping the conversation, 8/4/ patent discussion regarding Docket 57103-120 with Brian Utley, Steve Becker, Jim Armstrong, Si Bernstein, and Eliot. Okay, guys.

Becker: [], too, if that's all right with everybody.

Bernstein: Yeah, did you get the fax from Jim?

Becker: I haven't received it yet.

Armstrong: It was sent actually to Doug on the "cc" line, but to a machine at 297-4900.

Becker: That's right. It'll go to our central fax department, and I just phoned up there and asked them to deliver that to me when it comes in.

Bernstein: Okay, but you've got the patent in front of you?

Becker: I don't. I don't, but I can get it.

Bernstein: Okay, well, let's do that.

Becker: Okay. I'll need a minute. I've got to go over the Doug's office.

Bernstein: Okay.

Armstrong: The fax is on its way to you now.

~~Becker~~Simon: It's on the way to me? |

Armstrong: Yeah.

~~Becker~~Simon: Okay, then I'm going to put you guys on hold... |

Armstrong: It's not done yet.

Becker: Well, I've got to go upstairs and get it, so hold on.

Armstrong: Never a dull moment.

UtleyBernstein:----- They didn't put...they didn't put in what we corrected them on... |

Bernstein:-----~~Inaudible comment.~~ |

Utley: And I did it again on Wednesday night.

Bernstein: And he said to me all these changes were in when I went through them at 11:15 at night with them. That all the math has been changed. I was looking at him and said these haven't been changed. He said, "No, I'm working on a copy that's been changed. I'm going to send it to Brian, and sign off..." So, well, now, again, we're back at this same thing. How do we change things? What effects does it have on us?

Utley: This has no effect. Mathematically, that's...

S. Bernstein: Were those faxed?

Bernstein: YeahYes. |

~~S. Bernstein~~Armstrong: Okay. Nine pages. |

Utley: But obviously this has an effect.

Bernstein: A huge effect because you have completely altered numbers.

Utley: Well, you could explain it; but the only way you could derive this is by having that be the square root.

Bernstein: But this is wrong that he missed this, and isn't that on your current math? Do you have your sheet that you did...current math...that he said he didn't have, had, whatever? Brian, do you have the patent book?

Utley: Yes.

Bernstein: Okay. I need to borrow that.

Armstrong: I would think that in a patent document being as important to us as it is, there's not an acceptable level of error. It's either got to be all right, or it's not acceptable.

Bernstein: Oh, and that's what we heard from Doug this morning. So, I mean it's hard to fathom this.

S. Bernstein: You know what guys? I don't understand. Why doesn't somebody... take five minutes, and tell me what...because I sat~~u~~ it in a meeting with all the lawyers, and... |

Bernstein: Here, Dad, let me give you an example. Is 2,560,000 times .8 the same as 2,560,000 times 1.25? Yes or no?

S. Bernstein: I doubt it!

Bernstein: Okay, well, that's the fuckin issue. That's how far off these are. |

S. Bernstein: Okay.

Becker: This is Steve. I'm back, and I can't seem to find that file. Doug is out today. You guys may know. So, I don't know how much help I'm going to be.

Bernstein: Okay, well, do you have the fax? Hey, ~~DP~~Man, you've got the file right there. Just email it to him. |

Becker: Here it is. I've got the fax now.

Bernstein: ~~Okay~~Steve, Doug also mentioned that you had emailed some correspondence to us that you didn't think the math was right earlier? I have no records of any of that. |

Becker: No, what I did was I faxed the draft over on Monday night, which incorporated some additional disclosure that Brian had sent. Basically, it was examples. It had the equations set out for both print film and digital examples, and then he had three examples for print film and one example for digital, and I essentially...I exactly basically cut and pasted that into the application.

Bernstein: Well, the application we got from Doug didn't have any of that. cut and paste because what it had was the old stuff and Brian referred to having sent this to you several days earlier and yet it wasn't in there.

MISSING SECTION GO BACK

Becker: I don't really know because at that point Doug was down there with you guys, and I presumed you were reviewing it on like Tuesday and Wednesday. And the Doug said he would take care of just...because we figured there would just be some minor changes after we'd incorporate all of that.

Bernstein: Well, it wasn't incorporated, so there were huge changes.

Becker: Oh.

Bernstein: And it would have been filed completely wrong had it not been for Jim Armstrong reviewing it. Everybody would have nodded off on this and accepted wrong, completely wrong, filings.

Becker: Maybe he should be part of this conversation.

Bernstein: He's on this conversation.

Becker: Oh, good. Hi, Brian.

Utley: Hi, Steve.

Bernstein: Brian's here and Jim Armstrong's here.

Becker: Okay. Well, the only link we're missing here is Doug because Doug took the last few steps of incorporating comments and actually filing the application on Wednesday.

Bernstein: Hey, ~~EB~~...~~EB~~-man, forward him a copy of the final draft, would you?

Armstrong: And that, Steve, I think the most important question to have answered is what are our rights and obligations and opportunities relative to correcting this without any ill effects to us?

Becker: Yeah. There's plenty of opportunity essentially. We can file...if there are substantial errors in the application as it was filed, we can simply file a new application as soon as we get those fixed either on Monday or Tuesday or what have you. The goal of filing on Wednesday was to maintain priority back to the provisional application, which was filed a year ago.

Bernstein: So, did we lose that if they're wrong?

Becker: No, because we can only claim priority back to the extent that the subject matter was originally disclosed in the provisional filing of August 2nd of last year, and none of these equations were filed back then.

Bernstein: But the original process was.

Becker: Right. And the original process is ~~the~~ preserved in the application. We're just talking about the details of the math examples that are in here. So we haven't lost anything.

Bernstein: Will we lose claiming back to the priority of the original provisional? So we did lose something, or am I incorrect in what I'm hearing.

Becker: Yeah, No, we didn't lose...the original provisional can only provide priority for what was originally disclosed, and the math was not originally disclosed, right?

Bernstein: Well, no, but the math is a subject of the invention, not vice-versa.

Becker: The reason I'm putting the math in there is essentially to provide concrete examples...

Bernstein: Of the invention.

Becker: Right.

Bernstein: But the invention was in there as of the priority date, and we had already talked with Chris Wheeler and everything regarding this. Were you on that conversation?

Becker: I don't remember.

Bernstein: Well, Brian, you were on that conversation. It's the conversation where we were going back to try to get the soonest date on the filing and correcting the provisional to encompass all of these things.

Utley: Well, you can't correct the provisional, but you can...what it does is it claims back for everything that references back to the original, but then incorporates all the new elements to bring it into...to make it into more of a complete statement.

Bernstein: I'm not sure I understand this. It was my understanding that we were going back to Ray [Joao's] patent and fixing it by inserting what we have here. When I talked to Doug, that was what he was under the impression we were going to do, and now that's all changed as of today.

Becker: You really can't fix a provisional application.

Bernstein: Not the provisional-the ~~regular~~-Ray Joao filing of August whatever-whatever day it was.

Utley: No, in March. March 24th.

Becker: Oh, okay. Yeah.

Bernstein: And that way, if that patent gets approved with all this in it, that's what we were doing, and we wanted that one to be approved first correctly because it obviously expedites our life by a long way.

Becker: This is the PCT application file of March 23rd. Is that what we're talking about?

Utley: Yeah, but the way that I recall the conversation, the spec cannot be changed...

Becker: Right.

Utley: ...but the claims can be.

Becker: Right, and they can be changed as long as they're supported by teachings that are in that specification.

Utley: Right.

Becker: Which is why you really...

Bernstein: And the specification can't change?

Becker: Right.

Bernstein: Why?

Becker: Because it would be kind of like...

Bernstein: I thought that was based on new matter.

Becker: That's exactly why it can't be changed.

Bernstein: So it can be changed if it's still the same matter?

Becker: The claims can be amended as long as they are still fully supported by the matter that's in the specification that's originally filed. Now, if you want to change your claims and they're not supported by the specification as originally filed, then you have to file a whole new application adding new matter to your specification that will support those claims.

Armstrong: Does the fact that a direct interpretation of what in general amounts to typos and oversights, but a direct interpretation of that affect our ability to change that supporting matter of that matter? Because if we directly interpret the math in the certain circumstances here, it will bring you to a wrong conclusion if it's a direct interpretation without having to reverse ~~such an error but~~ engineer what was meant to occur.

Becker: Well, I see. Then we need to get the math right, but it doesn't affect our priority. Only by a few days essentially.

Bernstein: Well, do we lose the ability to claim priority to what we were trying to claim here...

Becker: No.

Bernstein: ...by that date? So you can go back in and change the matter of this?

Becker: You don't go back and change the matter, you just file a new application which claims priority back to a prior application only for the subject matter that was...

Bernstein: But we missed that application.

Becker: No, we've got it in the form of this continuation, or this PCT, that we filed claiming priority back to that patent application. So we've preserved that chain of priority.

Armstrong: Are you then completely confident that errors that we need to correct right now then are not going to hurt us in any way, shape, or form as being able to claim as part of our invention all of the correct things that we want in there?

S. Bernstein: That's what I heard at that meeting, that we could go back and re-do that at a later date without having any implication.

Bernstein: As long as it wasn't new subject matter.

S. Bernstein: Exactly right. These are just corrections to the...

Bernstein: They're corrections, they're math, whatever.

S. Bernstein: Okay, but we're not saying this is a new way to get to that.

Bernstein: No.

S. Bernstein: Okay, that's what I heard. That's the notes I took. Eliot, you should have that on the tape recorder so that we know that.

Armstrong: Well, we do, and that would also support, I think, another issue, which is that we now have to go through the refiling of something else which was originally corrected several days ago and was somehow ignored so that this whole refiling shouldn't even cost us anything.

Bernstein: Well, and beyond that, Doug <sic>, what I'd like to really get down to is a letter from you, in writing, explaining all of my, you know, both from the Ray [Joa] patent forward, and I think you need to talk to Doug about it, of what our potential pitfalls are here with these filing errors, what our potential pitfalls are, what it caused to happen with that priority, priority equals, and if there's any harm to us. Because we keep just slipping back by these things. This should have been right. I mean, we have well documented, and Brian's well documented, that these changes were sent, and now we've missed a priority claim to that by not being able to go back and change our last filing. I need to know the liability here.

Becker: You know, I was not there on Wednesday night. Brian talked to Doug on this and then made final changes, and then...

Utley: Yeah, Doug sent me a next-to-last copy, which I went through and there were a number of errors—I have my notes on each one of those at home—and then I reviewed each one of those with Doug, agreed on what they were, and then Doug was going to send me the last copy, which apparently he didn't because I never received it. At that point in time, it was, I guess, about 11:30 or 11:45 our time.

Bernstein: And these were also discussed in great length with him for a whole day on the phone.

S. Bernstein: Yes, well, how about in the...

Bernstein: No, no, Dad, this is separate. But at great length this was discussed, every one of these changes.

Becker: The changes you sent me here, is this Brian's handwriting?

Utley: No, some of it isn't. Isn't correct.

Bernstein: Well, let's go through it because I'd like to...

Armstrong: Yeah, let's go through it.

Becker: I don't know if that's going to help that much because it's a question of what actually was filed and whether it incorporated the changes that Brian asked for the last minute.

Bernstein: It didn't.

Armstrong: We know that. This is what was filed.

Becker: Brian, didn't you just say that Doug didn't send you the final draft of what was filed?

Bernstein: He did it the next day.

Becker: Oh, he did the next day?

~~Armstrong~~Bernstein: Yeah, Jim, can you forward that to Steve real quick?

Armstrong: What?

Bernstein: Email it to him...the final draft?

Armstrong: Yeah.

Becker: Well, I'm not going to question...

Bernstein: Okay, but we need to go through and get the changes acknowledged, accepted, have you put it into the next whatever you're going to do to solve this, with a letter explaining what we've lost here.

Becker: All right.

Bernstein: Okay. Any liability, potential liability where we're exposed to from this.

Becker: Oh, I wouldn't worry about it. You guys are making a mountain...

Bernstein: Well, you know, I gotta tell you, I worry a lot about it from what Doug told us. So, you know what I mean? You tell me not to worry, but then you tell me it's very important that we're accurate in this filing; and then we're very inaccurate in the filing, and then we're not supposed to worry. I'll feel much better not worrying with a letter from you explaining why I shouldn't worry.

Armstrong: Steve, what's at your email?

Becker: Sbecker@foleylaw.com.

Armstrong: Sbecker?

Becker: Yeah, "S" as in Steven, "becker."

Armstrong: Got it.

Bernstein: Okay. Let's just go through this with you, Steve, so we can get the next step done.

Becker: All right.

Bernstein: Which is correcting the issues. Are you with us on page 13?

Becker: Right.

Bernstein: Okay. Jim?

Armstrong: On page 13, line 19, the expression of VWH should follow the way we express it in our definitions, which is VIH. Even though the two are equal, let's just follow the way that we have it expressed in our definitions on page 12.

Becker: Oh, I see. Okay.

Armstrong: Then on line 23, each of those expressions is not congruent with the way we've defined them. Despite the fact that we arrive at the same results, it doesn't apply the formula in exactly the same way. So for a reader, it ought to be the same. So for line 23, it should be the "square root of 2,560,000 times 1.25."

Becker: All right.

Armstrong: Okay. Not "2560 divided by .8."

Becker: Okay.

Armstrong: On line 24, it ought to be "1789 divided by 1.25."

Becker: I see. Okay.

Armstrong: Then on line 25, it ought to be "1441 divided by 4." Again, the results are the same; the expressions are not.

Utley: Now, on that last one, Jim, it's correct. |

Armstrong: It's what?

Utley: The scan density is 1789 divided by 5.

Armstrong: Okay, hold on. Scan density is defined by us as being...where the heck is it...oh, it's right up above..."target image height..." right up above on line 7..."minimum scan density is target image height," which in this case we just defined to be 1431...

Utley: Where are you reading from?

Armstrong: Line 7 of the same page. Line 7, page 13. So target image height is 1431 divided by the source image height, which is 4, so it should be 1431 divided by 4.

Utley: Well, the...yeah I guess that that equation, "MSD equals TIH/SIH," did not come from my documentation. |

~~Becker~~Armstrong: Hold on, let me look at this documentation. I've got it right here, |
too.

Bernstein: Well, Steve, you have copies of this, too, that were sent to you...

Becker: Right.

Bernstein: ...of what Brian's looking at, several days ago. So how isn't this stuff flowing forward into the patents, especially when we pointed it out two times before filing? I mean, I'm just dumbfounded at this.

Utley: There was a change, Steve, which you were not involved...

Becker: The proper equations, ~~that I~~ wasn't there the last night when the last changes were put in, so I can't really speak to it.

Bernstein: No, but he sent you his changes several days ago.

Utley: Steve, there was a change that we decided on uh on uh Wednesday afternoon, which was to reflect aspect ratio as width divided by height, which uh I uh made, and that was created by the desire to reflect aspect ratio the way that displays are uh uh expressed as opposed to the way photographic images are expressed. Photographic images are expressed the opposite way, and that's the way the documentation uh uh had been originally prepared. But it was thought that it was uh perhaps more consistent with current technology to express it the way that displays are expressed. So I went through and changed...

Becker: You mean from that change in ~~invention? convention?~~ convention?

Utley: Yes. So that caused the equations to be reconstructed to reflect the uh uh inverse of what was there before because the affect ratio now is inverted.

Becker: I see.

Utley: And what happened was Doug apparently did not pick up all of those changes, even though I went through them very methodically the last thing uh Wednesday night when he sent me ~~his~~ uh uh his uh almost-final draft.

Becker: I see.

Utley: Uh And uh, Jim, just for your uh edification, that also affected the MSD shifting from a height to a width orientation. The number is the same, but it changed it from a height to a width.

Armstrong: So what's the correct formula for MSD?

Utley: It's TIW/SIW.

Armstrong: Okay.

Bernstein: So, you made this change with Doug, and it's still wrong in the patent?

Utley: Right

S. Bernstein: I'm a little concerned about the proficiency of the legal aspect of this. We sat there for hours, and then Brian stayed late into the night with this guy, and then he comes back and we don't file it right anyway? It seems like there's something wrong here. I mean, ...

Bernstein: I mean this is, yeah...

S. Bernstein: I mean, I'm just budding in because I have little or no knowledge as to what the numbers mean, I'm just listening to a conversation in which I'm hearing is that after four or five hours in a room locked together with lawyers and everybody else, we reach an agreement that those changes will be made. Now, my understanding is Brian stayed and made those changes, and then the lawyer didn't file the changes? What's the sense of that?

Bernstein: These are good points. Let's move forward, Jim.

S. Bernstein: These are points that have to go back to stockholders with money invested.

Bernstein: That's why I've asked Steve to send us a letter of what's happening, what our exposure is, by Monday or Tuesday, explaining how this didn't occur, get in, and what we're going to do to resolve it, and what that resolve initiates in the chain of events.

S. Bernstein: Well, the other side of it is this. If after all of this precaution has been taken—and Brian, you can correct me if you think different—but after all of this precaution has been taken, it appears that the fallacy of worrying about it ever gets accomplished. Brian stays, everybody works on it, it's still filed wrong. Now what if Jim Armstrong hadn't caught it. Brian was on a plane today...

Bernstein: Then none of Brian's changes even sent several days ago even would have even been in there. Math would have been wrong, equations would have been wrong, verbiage would have been wrong.

S. Bernstein: Am I right, Brian, in having this concern?

Utley: Uh Well, yeah, obviously it's uh clearly uh uh a major concern because there's nothing more disciplined than the uh uh mathematical expressions.

S. Bernstein: And you're comfortable that what you did, even if some of them were wrong, that we could have later corrected...

Bernstein: No, Dad, we sat here with Brian and Jim and Doug, and we went through it, and we all agreed it was right, and those changes do not appear.

Utley: No, we...uh uh

S. Bernstein: That makes me very nervous. Well, it makes me nervous to the extent that are all of the other patents done right?

Bernstein: Well, that's what I'm...I'm going to start having somebody review all of this. I mean, obviously there's...it opens up a whole can of worms.

S. Bernstein: Well, the other thing that I heard was—and not negatively or anything else—but I heard that perhaps Ray [Joac] did this work and he was either concerned about it being a bit sloppy, blah, blah, blah, blah. What is the excuse for this law firm?

Bernstein: Well, let them write us what's happened here. I mean, I definitely need to see on paper, Steve, some kind of report on this. That it describes what occurred, why it's not reflected in the patent filings, and what our exposures are, and that'll tell us what we're dealing with in firm, etc., liabilities. I mean, we don't know that.

Armstrong: We should continue to look at the changes so that he's copy that reflects everything.

S. Bernstein: Well, even if there is no liability, what I'm still concerned about, even if it can be corrected, it's the exact same position—Brian, am I right?—that we found ourselves in with the last lawyer who did it. Okay, thank God we can make changes, but that isn't the answer. Why not just get it right, get it filed...

Bernstein: No, don't just say thank God we can make changes, Dad, because all of that brings additional liability to you. You miss dates, you miss claiming, you miss this and that—words that are very tricky and confusing, and only these guys can understand. So that's why I need it to be put in writing so I can have it analyzed...

S. Bernstein: Absolutely, I want it definitely, because I need to take it...you know, I need to have board member approval...

Bernstein: Oh, I think our board is going to be disastrous with this stuff about several things when we take this to them. And we need to know from the Ray [Joac] level to the Foley-[Lardner] level, how this is going to be cleared up and what the problems were that occurred.

S. Bernstein: Okay, let's get that part in process; and it's unfortunate that Doug's not here because maybe it's something he could explain.

Bernstein: No, I talked to him this morning; and as a matter of fact, he said Steve had the math from Brian days before and by the time he got it, he thought it was all input correctly, and that was his excuse.

S. Bernstein: Well, what was he doing here with Brian?

Bernstein: Well, then we spent a whole day with him correcting it all so that it was right; and then by filing time, none of it was right. So, let's go forward. Let's just stay on track. We'll deal with all of these issues on Monday.

Utley: Uh I just say one thing. Uh Fortunately, uh I don't know The most important part of the math is all of the definitions. The examples are examples; but the most important part of the math is the are the definitions.

~~S. Becker~~Bernstein: Okay, are those right?

Armstrong: No. Well, there's one that's not ~~, we just found out which is []~~. Line 7 of page 13...

Bernstein: Is wrong.

Armstrong: Is wrong. It should read...

Bernstein: ..."[] equals TIW/SIW."

Utley: They are mathematically uh uh equal. Both will give the same results. So It's a uh consistency question as opposed to an accuracy question.

S. Bernstein: And for a reader, it would probably be easier to be consistent.

Utley: Absolutely.

S. Bernstein: That's what we want. As long as we're spending all of this money and everybody's devoting their time to it, we want it to right-as right as you can possibly get it at any rate.

Bernstein: Okay, Dad, let's move forward.

Armstrong: That changes one thing on line 25. The expression on line 25 is now correct as it was typed, so scratch out my handwriting. Okay? All the other corrections stand as I explained them earlier. Now, on the last line of this page, that should read: "480 X 320."

Utley: That's correct.

Armstrong: Okay. Then on line 6 of page 14, I think we should consistently state which is width and which number is height because it's such an important distinction in the calculations. We did it on the previous example, but not on this one.

Bernstein: This then is width height

Armstrong: Width is [] height is 4

Utley: And that is what we had agreed upon on Wednesday afternoon.

Bernstein: Right. That changes again in a minute

Armstrong: Okay. Line 17, again we're just missing that square root symbol in order to make that equation work. Without the square root, it's millions instead of thousands. Now, in line 19, I had originally indicated this was correct; it's now incorrect because of our change in the formula for the density for the maximum scan density.

Bernstein: Steve, are you getting all of these?

Becker: Yep.

Armstrong: This should now read in line 19: "1789 divided by 5 equals 358."

Becker: "1789 divided by 5 equals 358?"

Armstrong: Yes.

Becker: All right.

S. Bernstein: Steve, I have a question to ask you.

Becker: Yes.

S. Bernstein: When Jim or Brian or anybody gives you these numbers, are they checked out by anybody, or do you just copy what we say and that's it?

Bernstein: No, they definitely don't copy what we say. That's an initial problem here, Dad.

S. Bernstein: Okay, I don't mean to be sarcastic.

Bernstein: No, but they would normally as mathematical people add up the equations.

S. Bernstein: Yeah, because your partner was telling me that most patent lawyers are engineers, which would lead me to believe that somebody would say, "well, I better check the math to make sure that guys who are not engineers know what the hell they're talking about." Is that done by your firm, or is it just accepted as gospel what we give you?

Becker: We don't have engineers or technical people check the math that you provide us.

S. Bernstein: Okay, so what we provide you, then, we live and die by?

Becker: Okay. Your job is to get that right.

Bernstein: Right, but what we did give you, you didn't provide in the patent.

S. Bernstein: Okay, we're trying to say the same thing.

Bernstein: Okay.

Armstrong: Let's just get it right.

S. Bernstein: At this point we're only interested in getting it right.

Armstrong: Line 27, that should be "36@H" for the height.

Bernstein: Which page?

Armstrong: Line 14, third-to-last line of the page.

Bernstein: Okay.

Armstrong: Now we're onto page 15. Again, we just need that square root symbol as indicated there.

Becker: Okay.

Armstrong: Then there is nothing on the next few pages until we get to page 18, this is an important omission for our calculation standpoint, but we need that square root symbol.

Becker: Okay.

Armstrong: Then I'm going to skip for a second this discussion on minimum scan density here because I want to talk to...go with Brian's comments, too, but on line 10, the correct figure is "1.33 equals 1.33."

Becker: Okay.

Utley: Yeah, that wasn't picked up from the other...from above, the aspect ratio.

Armstrong: Line 15, the square root symbol again is missing from that same equation. And then finally, I don't see why, in this example, or any digital example where we have no scanning to do, why we should even include any reference to minimum scan density because the only application of scanning in a digital world is if we were to print a digital photograph and later scan it, in which case we'd follow the print formulas, not the digital formulas. So, my suggestion here is that we change the sentence, beginning on line one, to end after the word "dimensions"...actually, strike the words "and minimum scan density" and also to eliminate line 23. Do you agree, Brian, that there's no reason to have that there?

Utley: It certainly doesn't add anything. Uh It doesn't uh uh subtract anything.

Armstrong: It just added confusion to me as a reader when I thought, "How do I calculate that?" and then realized it's not...we're not scanning anyway. Why ask someone to determine something that is not included as a step of the process? So I think if everyone agrees, we should strike the words "...and minimum scan density" in line 1 and 2...

Utley: No, what I would do, I wouldn't do that. What I would do is simply say, "...image size and dimensions" and then add a new sentence which says, "Minimum scan density is not required since we are dealing with a digital image."

Armstrong: That's fine, too. Then let's strike line 23.

Utley: No, I'd leave that in.

Armstrong: It's redundant, but that's okay. Do you see any other problems with the formulas? Did you review all of this again today, Brian?

Utley: Uh I've just uh uh I have not reviewed anything today. I wasn't aware of the problems until about three minutes ago.

Armstrong: Okay. So that covers my comments on that.

Bernstein: And, Steve, do me a favor. When you guys draft this letter, draft it to Si and Brian. Okay? I'd like to be cc'd on...and by the way, I'd like to be cc'd on any correspondence of anybody to do with the patents.

Becker: Okay.

Bernstein: One last thing. Doug mentioned that you had a file from Brian, a spreadsheet that part of the spreadsheet matter is not incorporated in here. He didn't know why...he couldn't explain why. I was wondering what that matter is, and where is it? Are you aware of that? Because he referred to you.

Becker: Did heTo me?

Bernstein: Yes.

Utley: Uh uh That's probably the image sizing spreadsheet.

Becker: Image sizing?

Utley: Yeah, I sent you two files on Monday.

Becker: Okay. Actually, you sent three all together. Oh, you sent three emails, and then the last one had two of them.

Utley: Right, the last one had two files: both the image sizing and the process.

Becker: Oh, you've got the macro, and then you've also got the description of the math. Now, what did you want included that wasn't?

Bernstein: Well, Doug said it should have been included, but it wasn't...the rest of that sheet.

Becker: What?

Bernstein: I don't know. Whichever half's missing.

Armstrong: Hold on one second...I don't want to confuse Steve. We do not want you to cut and paste out of those documents into these patent filing. Those documents do not reflect the way we want to express the math.

Bernstein: Right, but we might want them in there, B, correctly.

Armstrong: What?

Bernstein: We might want them in their correctly...

Armstrong: ~~They're not in there correctly.~~ We just went through it. It's now correct. If he employs all of the changes we just all agreed to...

Bernstein: No, but there's another sheet that's not reflected here.

Armstrong: Well, yes, I do want to talk about that. The macro, right?

Bernstein: Right. Can you forward that file to us--the Excel sheet--to Jim, me.

Armstrong: Just have Steve forwarded the whole email back to you.

Bernstein: Well, he doesn't have it in front of him, and Brian's got it right here.

Utley: No, I sent it to you. You were copied on it.

Bernstein: Okay. Let's just get the most up to date...any changes.

Becker: Yeah, Brian, remember, we made a decision not to file the claims directed to your macro--we made that decision last...a week before the...

Bernstein: Why?

Becker: Because it was going to involve some additional work, and we didn't have time at that point; and it was all new matter that wasn't going to claim priority to anything, so...

Bernstein: Well, what's new matter? If the math is part of describing the invention, then it's not new matter, according to what Doug's told me four times now.

Becker: Well, Eliot, as you recall, you always have to look at the claims of the application, and that defines the scope of your protection. The claims will also define...also have to be supported by the specifications. We were going to direct claims to the idea of using...of having a macro program, which is useful as a tool, to do these calculations in a rather simple process.

Bernstein: Okay, that's fine if you want to just claim a macro. That does it as a simplified process and add that as an additional patent for us, but the underlying math of it should all be applicable to the invention since it's just derived off the invention.

Becker: Yeah, math...

Bernstein: So it's not new matter, it's just an understanding of the matter. I mean, I swear we went through this four times the other day with that conclusion.

Becker: There are two files that Brian sent me. One of them was an Excel spreadsheet having six pages, and all of that material was included in the application in pretty much cut-and-paste format. His pages 2, 3, 4, and 6 were the examples, which I just cut and pasted as soon as I got them from Brian because they defined it all very particularly.

Bernstein: Okay, now you need to get back your record of that because 2, 3, 4, 5, and 6 that Brian is sitting here showing me, were never in these patents yesterday. So cutting and paste, you must have put them in the wrong document.

Utley: Those are the examples.

Bernstein: But those weren't...that's not what ended up in there.

Utley: They pulled these pictures out and put them as a uh uh uh figure sheet on the back, uh and then uh uh we ~~re-~~entered...

Bernstein: Wrong math.

Utley: ...the formulas in the body of the...

Armstrong: Hey, right. B, are those images...are you looking at the figures? Are all of these figures in the patent application.

Utley: We should be on figure 7.

Bernstein: Steve, figure 7?

Becker: Okay.

Bernstein: Are you looking at it?

Becker: Not in front of me, but I recall writing it.

Bernstein: Jim, figure 7, what do you see?

Armstrong: I don't have a figure 7...because that was part of...that didn't come in the patent application, that I was mailed~~but []~~.

Bernstein: It's not part of that final patent?

Armstrong: I don't know about that, but it didn't come as part of that Word document.

Bernstein: That's what I just sent you, ~~that's~~ supposed to be the final revision of the patent.

Becker: We have to scan the drawings into a Word document; so if you just mailed the Word document, you probably didn't get any figures yet.

~~Armstrong:~~ Probably the figures were left off of that Ei-

Bernstein: Okay, do you have your patent application?

Armstrong: I've got the one we reviewed on Tuesday Wednesday.

Bernstein: And what's in there?

Armstrong: All the figures.

Bernstein: Right or wrong?

Armstrong: You know, I don't know. I didn't...Brian, was figure 7 changed at all with the restatement of our aspect ratio?

Utley: Yeah There were some additions that I made for clarification purposes. Uh If you look at the first page of the imaging process, where it says, uh uh the third box down, it says "viewing image," uh I inserted uh "SIR less than DWR" to tie it to the equation above it. And then in the one, the bottom, uh uh it has the expression "SIR greater than BWR," again, that is to tie it to the equation above it.

Armstrong: Yeah, because those two don't have a distinction, figure 7 as it is now.

Utley: Right. So that simply ties the image to the equation.

Armstrong: So do they have...have you sent them an updated amendment?

Utley: Yeah, that went out uh uh late Wednesday afternoon.

Armstrong: Okay, we've just got to make sure that the corrected figure 7...

Bernstein: Steve, can you fax us the filed patent?

Becker: No, I can't find it. I guess Doug took care of this from...

Bernstein: Does his secretary have a copy?

Becker: ...Monday night on. I spoke with her, and she wasn't clear...she wasn't able to find it.

Bernstein: Do we have a filed patent?

Becker: How certain would you like me to answer that question? I mean, Doug sent me an email saying we filed the patent.

Bernstein: Well, what he sent me that he said he filed is missing the diagrams. So, I have a final patent document missing...

S. Bernstein: When is Doug available?

Bernstein: Yeah, does he got a cell phone or something?

Becker: I don't know. I don't know. Maybe I can help clarify this...I mean, Eliot, you sound like you're really upset at us.

Bernstein: You know, I'm not a person to get upset until I see that I spend a lot hours going through this, Brian spends a lot of hours, we make all of these global changes...

Becker: Eliot, I've heard that a couple times already. Let me try to explain a little bit about patent law and maybe help everyone understand what has or has not happened. Okay, there's a lot of rhetoric being thrown on there, but there's...

Bernstein: Yeah, because we're blind.

Becker: I don't think all of it has a lot of basis in patent law.

S. Bernstein: That's good to hear, so let's hear that.

Becker: Okay, and Si, I thought you in particular might be interested to hear that.

S. Bernstein: Yeah, that's, you know, I'm not sure that adds any comfort because maybe what you're saying is it's not an exact science and then you move along...

Becker: Well, I'm going to go well beyond that.

S. Bernstein: Okay.

Becker: Does anyone have a copy of claim one they can read off of?

Bernstein: Yes.

Utley: Uh uh This is only a piece of it, right? |

Bernstein: Yeah.

Armstrong: It's Page 22. |

Becker: I'm working off what you emailed me, Jim, and I see page 24, lines 1 through 7. I guess they could have repaginated, but...

Armstrong: Oh, but Eliot had mailed you...or faxed you...

Becker: I'm sorry, what you emailed me.

Armstrong: Oh, okay. So it's changed then. I don't know why, though.

Becker: On the top of the page says "What this claim is."

Armstrong: "What this claim is"...

Becker: Do you have that?

Armstrong: Yes, page 22 in my printed on.

Becker: Okay.

Bernstein: Okay, hold on one second because I want to get my notes.

~~Utley~~S. Bernstein: What page is that, Jim?

Armstrong: Page 22 You don't have it, BrianSi.

S. Bernstein: Because I don't have 22.

Armstrong: Want me to fax it... email it to you?

S. Bernstein: No, that's okay, he's going to explain it to me. I want to see if I can't understand this.

Becker: Sure. It's very sort claims, seven lines long. It actually defines the scope of the patent protection that we are trying to obtain in this filing.

Armstrong: Who are we waiting for, Eliot?

Becker: I ~~think~~believe so.

Bernstein: Yeah I'm up front. We're waiting for Brian again.

Becker: Let me know when you're ready.

Bernstein: Okay, Steve, Brian stepped out for a minute, but I still want to address this issue. We invent something. I hire a mathematician. The mathematician solves the X, Y, and Z of the invention. Does he claim a new patent for himself?

Becker: Probably not. [Inventorship] typically follows with the conception of invention. If somebody else figures out how it was done, generally speaking that would.

Bernstein: Well, I want to be very ~~clear~~clear on this because Doug's thinking...I don't even know if then the next statement is correct or incorrect, but if a macro was created using the math that comes from the invention, where does it follow? Brian, I just asked him, if I hired a mathematician to do the math, put all of this into a thing, where does this follow. He says the invention, the inventor, etc. The guy you hired to do math wouldn't claim a new patent or a new invention, which is confusing to me because Doug now, as of this morning, told me that you're planning on filing a separate patent as inventor of a macro that just spawns off the math entitled to this invention. So I'm confused, and I want to be very specific on this of what our strategy is here on all of these peripheral pieces.

<End Side 1; begin Side 2>

Bernstein: Why don't you explain that to me again.

Becker: Can we go ahead with describing the claims?

Bernstein: Well, do you want to just finish that real quick, and then we'll go right back to the claims?

Becker: Okay, now what was the question you posed me, Eliot?

Bernstein: I hired a mathematician to solve for what I did. He comes up with an equation. Where does that equation belong? Does it belong filed as another patent? What's the inventorship, so to speak? And then, I design from that math a macro that solves that math with input formula. How should we be protecting that the whole way through, because I seem to be very confused about what I'm being told each day.

S. Bernstein: Okay, let him answer the question.

Becker: Inventorship follows whoever conceived the invention as claimed, and that's why the claim is so important because when you set forth in your claim what it exactly is that you're claiming, you have to ask who conceived of that idea—who was the first one to come up with it. So, typically if somebody really reduces your idea to equations that describe why it works or how it works, typically they would not be named as a co-inventor because they really didn't invent the idea. Now if you wanted to claim a macro which has user-input displays for receiving certain data that can be used by, say, a technician to determine the scan density of a print film image that would allow for the desired enlargement ratios and the desired target image size, that kind of is a separate idea, and that's why we thought it would be useful to claim that as a tool as well.

Bernstein: Okay, and I understand that part. I don't mind claiming that all day long.

Becker: Brian really was the one that built that and came up with it. It's based on principles that you learned, you know, a few years ago that maybe you didn't understand the math behind them, but certainly, I would think, be named an inventor on that.

Utley: I think that would probably claim both Eliot and myself as it relates to both aspects.

Becker: Right. But the important thing with the patent office is that it is...the patent office realizes that it is a bit of a grey issue in terms of who conceived what, so the important thing is not to have any deceptive intent.

~~S. Bernstein~~Armstrong: I think the most important thing is the distinction between inventorship and ownership. As I understand, all of this, every one of the patents that we have filed, all rights, title, and interests are iviewit's, regardless of who the author/inventor is; and any revenue stream derived therefrom are iviewit's, and that's the important thing. Is that true, despite and in light of the [__]?

S. Bernstein: Well Jim that's ~~May~~ very next question

Armstrong: ~~r~~ because we could put anybody as an inventor; but as long as that doesn't entitle them to a disproportionate share of any revenues derived therefrom, then I don't care.

Becker: Yeah, inventorship or ownership initially vests in the inventor or inventors who are named in the application; but typically, inventors are under some obligation to assign to a corporate entity, either written or by cause of their employment—and you can get into the issues of shop right...you know, if somebody invented something on the corporate time and then went and...you know, it wasn't really part of his job description, I know this issue's going to be a little more tricky. But I think in this case...what we do typically as a practice to confirm ownership is to have the inventors sign a written assignment document over to whichever corporate entity they want to...

S. Bernstein: But haven't we followed that?

Becker: We've got those documents. I don't think we have them all signed and filed yet.

~~S. Bernstein~~Armstrong: Let's get them.

Utley: Well, Doug was doing that on Tuesday while he was here.

Becker: Okay. Did you do some signing of documents, Jim and Eliot?

Bernstein: Yeah. Right.

Becker: Okay, so that's in process.

Bernstein: Okay, and wasn't really the intent of my question. The intent of my question is to define, for my understanding, what should claim back to Ray [Joao's] patent, and that means that everything other than a macro shell should define back to the original patent and be filed, corrected, amended, however we get it in to the original patent documents since none of it's

new matter, it's just an explanation mathematically on every equation of what happens.

S. Bernstein: That's what I heard at the meeting.

Bernstein: And that is exactly what I've heard, repeated; and then this morning, it was completely opposite, and yesterday it was a little opposite—a little—and, you know, I've become very confused about which strategy we're taking, which road, because we decide something, and then it's changed, and we're doing something else, and I'm completely lost.

Becker: I think I can make this very clear for you if you'll give me an opportunity.

Bernstein: I will.

Becker: Let's take a look at claim one. Claim one states that what you're claiming is a method of providing a digital image file for viewing on a user display in a viewing window that has a predetermined size, and the method includes one step. The step is, very broadly stated—so bear with me here—providing a digital image file having a image size comprising a fixed number of pixels representative of an image wherein that image size is greater than that of the viewing window size. Now the broad concept that we're trying to claim here is being the first ones to provide a digital image file that has more data than is needed for the window size. And why are we trying to claim that? Because that allows you to zoom into the image without pixelation, and it allows you to pan around the image to corners that maybe are not shown in the original viewing window. Does everybody understand that?

Ullery S. Bernstein: I think so.

Armstrong: Yes.

S. Bernstein: I think we're on the same line.

Becker: Okay. So now the question becomes: Did we support that claim with relevant descriptions in the specifications. And what's our standard? Our standard is that we have to provide enough disclosure in the specifications to enable somebody to make and use that invention as claimed. This person needs to be somebody of ordinary skill in the art—in other words, somebody who can read this document and maybe has some technical background in imaging or image processing, for example, and can read what we've put in our document and can perform our methods claimed. Okay? Everyone with me so far?

Bernstein: Um, hm.

Becker: So we look back into the document that was filed on Wednesday and we say to ourselves, "Did we provide enough information in that document to allow somebody to teach somebody how to make and use a digital image file that has an image size greater than the viewing window size?" And one might argue that stating the solution in itself almost provides enough information to one of ordinary skill in the art to actually reduce this to practice and to make and use one. However, we've provided not only a description of several different ways of doing it, but also some examples, including math, that should make it abundantly clear to one of ordinary skill in the art how to do it. The test is whether it would require undue experimentation on the part of this fictitious person of ordinary skill in the art to make and use a digital image file having these characteristics. So the question you need to ask yourself with respect to this application is: "Okay, maybe there was an error or two in how it was expressed in examples or the number of pixels counted or division here or subtraction there, but was there enough in there to enable somebody, based on those teachings alone and, of course, their background, to make and use an image file having those characteristics?"

Ullery S. Bernstein: Okay.

Becker: And I think, based on a reading of it and based on what Jim just walked me through in these corrections that need to be made, that there probably was enough

in there. That there probably is. I mean, we've described in several different ways how to do it with print film images or with digital images. We described in generally, and then we went and described it specifically.

S. Bernstein: Okay. Can I ask you a question?

Bernstein: Wait, Dad, because that still doesn't answer my question. That answers this issue here.

S. Bernstein: Let him finish with it.

Bernstein: Okay. Are you going to take this back to Ray's original filing on our...

Becker: Let me do that next, okay? Now, with respect to Ray's original filing on August 2nd of last year, we asked the exact same inquiry when we review the specification that we filed on Wednesday: Did Ray's filing back on August 2nd of 1999 provide enough disclosure and enough teaching to enable one of ordinary skill in the art to make this file?

Bernstein: And we have a lot of disputes on that because it doesn't even cover zooming.

Becker: Right, but what it does describe, if I recall correctly, is it does describe that you want to enlarge a print film image to a certain size and then scan it at a high density. Now it doesn't tell what density, it doesn't give a number of pixels,

Bernstein: It doesn't talk about zooming in on the image.

Becker: It doesn't tell the number of pixels, but it does show one way of doing it with a print film image. It doesn't talk about digital images...doing it specifically with digital images. It may refer to it generally, I don't know. But that is the inquiry.

~~S. Bernstein~~Armstrong: If I hear you correctly, it is less important in the claim to say anything relative to zooming was in the claim to illustrate or to claim that the target image size is larger than the viewing image window because that is, in itself, your ability to have the zoom capability.

Becker: You're right. You can claim it all different kinds of ways. This was one way that we worked out in conjunction with Eliot and Brian two weeks ago. This is one of the ways we worked out claiming the invention.

~~S. Bernstein~~Armstrong: Because ultimately zooming is simply a feature of the invention.

Bernstein: Okay, hold on one second. Steve?

Becker: Yeah.

Bernstein: When I look at Ray's claim one, "What is claimed: An apparatus for producing a digital image comprising a device for generating a digital signal file from a print film image and a processor for processing said digital signal file and for generating an image file wherein said processor generates a first signal file from said digital signal file, and further wherein said processor processes said first signal file and generates set image file."

Becker: Okay.

Bernstein: Okay, we all agreed that that is completely insane...to describe anything about our invention...whatever.

Becker: I know it's all completely insane; but I think that with the claim that we drafted, ...

Bernstein: Yeah, he missed the point.

Becker: Okay.

Bernstein: Well, then, the claim we drafted, this was my question. It should be right here, in this claim, in the patent he filed to date back as far as I can to protect our dates, should be changed to the claim we just created.

Becker: Oh, no, this application died on Wednesday, and it doesn't proceed to a patent. A provisional application...

Bernstein: No, no, this isn't provisional. This is a filed patent. I'm ~~dealing~~ dealing with ~~one~~

Utley: This is the one that was filed March 24th.

Becker: Oh, okay.

Bernstein: By Ray [Joac].

Utley: So this was the PCT filing on March 24th.

Becker: Okay, thanks.

Bernstein: And my question is shouldn't the claims in this patent we just filed be exactly, if not identical, to the one...or should they be transposed to Ray [Joac's]? And it was my understanding from Doug that for speed and if the patent gets through, etc., that we would rather have it be based on that first patent filing.

Becker: That could be a recommended course of action.

Bernstein: And this is going to get dejected.

Utley: What we discussed on Tuesday...no, on Monday afternoon, was that uh one of our action items was to go back and review the uh March 24th filing and decide exactly how we were going to integrate into that filing the uh the uh claims that are that should be in there vis-á-vis the specification.

Becker: Okay.

Utley: That was one of the action items that we uh uh covered on Monday afternoon.

Bernstein: And now my question further goes to say that once we amend the claims, is there any way to amend the body?

Becker: No.

Bernstein: Even if we're not adding new subject matter?

Becker: You can amend the body if you don't add new subject matter.

Bernstein: Okay, so we can fix Ray's mess.

Becker: You can't add what we added in this application.

Bernstein: Which part? The math is just a description of the old matter, so therefore we should be able to add it.

Becker: It's not supported. It's not suggested in the prior applications.

Bernstein: Oh, it's all suggested because by the nature of the invention it's suggested.

Becker: I think the patent office will never allow us to add all of that matter into the application.

Bernstein: Okay, but we should add as much matter as we feel comfortable with to buff up Ray's original filing.

Becker: Sometimes if you change a word or a sentence in a specification...

Bernstein: Yeah?

Becker: The examiner will outright reject it for new matter.

Bernstein: Well, who cares? He's going to reject this for insanity in the first place. I mean, he's going to reject this for "what did you patent? Nothing?"

S. Bernstein: If I'm hearing Steve right, there's very little we can do to change the language and content of that particular patent...

Bernstein: No, you're not hearing him right because he just said you could change all of the claims whenever you want as long as the examiner hasn't approved them. And right now before the examiner starts approving...looking at this and saying it's nonsense, I'd rather get the right stuff in there. Now, we can get most of this stuff in there, albeit I'm going to need good argumentation as to why we can't get it all in there.

~~S. Bernstein~~ Armstrong: Steve, is that correct?

Becker: We can change the scope of the claims of the prior application...I mean, that's a good action item, a good thing to do. You know, as I mentioned, it's unlikely we'll be able to change the specification substantially; and if we don't quite...

Bernstein: Well, we should throw in the word "zoom" if we can.

Becker: At some point it becomes a question of language and what language you've used. If we come in and start saying, "Well, what we really were talking about is zoom and pan," Yeah, it's possible we could get some of those arguments through the examiner, but...

Bernstein: Well, we sure as shit should try.

~~Uteley~~ Bernstein Well, it looks like Ray took all of this out of here.

Becker: It's not as critical as getting one good filing on like we did on Wednesday.

~~S. Bernstein~~ Armstrong: Yeah, but the date's what's important.

Bernstein: Right.

~~S. Bernstein~~ Armstrong: If this March one...we have one good filing, but it's dated August 2nd. That's the difference.

Becker: But it claims priority back to...

Bernstein: The original provisional.

Becker: The original provisional, which is before this date, again to the extent that it's...

Bernstein: Right, and that's the strategy I have been hearing is the correct approach here, is that we should be cleaning up Ray's filed patent as best as we can without adding subject matter--and I don't think we really have any new subject matter other than a macro shell to re-widget our math, which is okay, we'll leave that out. But I definitely want the underlying math, because that's just not new subject matter, that's just old subject matter defined, and try to get as much of this in that examiner's hands as fast as we can because that is our first patent and we'd like it to approve. And then you know what? Leave the macro in this one, and then you've got a reason that you've got new matter in this one that doesn't conflict with your old matter. I mean, the math, I sat through with Doug, went through this with Chris Wheeler, my father, I heard all of those things, and then I'm hearing that that's not our strategy. So I just want to be very specific on this so that we get that completed in time. I know there are issues to timing, etc., that we don't want to wastewait.

Now, I'm also confused of how we particularly predicted our date as well on when this was first exhibited. According to my last notes of when you guys were down here originally, we kind of went through a timeline; and that timeline has now been changed to September, when, in fact, we felt it was more like April or something as the first commercial advantage. Now Doug's talking to me about September dates, and I can list you fifty things that occur before then that will be detrimental. As a matter of fact, the first one really being something like 8/10, which only gives us six days, if my numbers are correct. We signed a license contract with

[Centrec? Centrack?] to use and distribute your product. So that's well before 9/1; and these are some real critical things that depend on that date, if I'm not mistaken.

Utley: What contract?

Bernstein: [Centrec? Centrack?]. The license agreement was signed on 8/10.

Utley: The only thing we signed was a demo.

Bernstein: A demo license, yeah. Well, you were putting it up to commercialize on their site-- on a public site.

Utley: But there was no charge.

Bernstein: But it's not a question of charge, according to Doug. Correct, Steve?

Becker: I need to have some facts.

Bernstein: Okay. We signed a demo to put up on a company's Web site, and we did, our materials for public viewing so that they could identify customer response.

Becker: Oh. When was this?

Bernstein: 8/10.

Becker: Okay.

Bernstein: Now, there were conversations prior to that.

Becker: Well, the upside is that we've got an application on file as of this past Wednesday.

Bernstein: Well, what about changes?

~~S. Bernstein~~Armstrong: We have to deal with that one year of commercialization.

Bernstein: If we're not wrong, and I hate to preach to a lawyer, but that seems to be my understanding. So I'd like to get what is claimed in this one into Ray [Joao's] immediately, if not, somehow sooner.

Armstrong: Well, hold on, let him answer the question about commercialization. Would that be considered the first date of commercialization or a date of commercialization if there's one prior to it?

Bernstein: There's not, but...

Becker: Again, we have to start with the claimed invention...

Armstrong: This was ~~+~~zoom & pan imagery that we did for him.

Becker: Okay. And the inquiry is whether or not...

Bernstein: No, it's video, too, B, that we did.

Armstrong: There was video, too?

Bernstein: Sure.

Becker: The inquiry was whether or not the claimed invention was on sale more than one year before the filing date of the application.

Utley: This was a test program to determine feasibility.

Becker: That actually works in our favor. The laws recognize sort of experimental use as sort of being a mitigating factor in some types of public disclosure. Typically if it's a commercialization use, or to test the commercialization of the invention, they're less likely to find it to be...

Bernstein: Well, then, that's definitely what it was.

Becker: ...commercial use.

Utley: Is there any difference, Steve, between...we signed an agreement to do that.

Becker: Okay.

Utley: There was no public visibility for another month. So which date will be the reference date?

Becker: Would you call that a sale, that agreement?

Utley: No.

Becker: Okay.

Armstrong: Were we ever paid anything by [Centrec? Centrack?]?

Bernstein: No.

Utley: No.

Armstrong: Never.

Becker: Okay, that certainly works in our favor if it wasn't an actual sale of your product. In that case, you look more at the public disclosure date.

Bernstein: Well, that was the public disclosure date.

Utley: No, that was September.

Bernstein: No, it was this date because...well, whenever you put it up on the site publicly.

Becker: When did you put it up on the site publicly?

Utley: It was in September. It took us awhile to get there.

Becker: Okay. No problem, then, right?

Bernstein: If that's...I'm hanging my hat on a lot of things right there.

Utley: If that's the date of reference...

Bernstein: You know, I want to beat the 8/10 day of signing a license agreement because I don't know how that's going to be construed in court, nor do I care, when I can beat it right now.

Becker: Let me ask the question again, Eliot, do you think that the application that we filed on Wednesday does not provide enough information to enable somebody of ordinary skill in the art to practice or to make and use what we claim in claim one?

Armstrong: I could argue it doesn't.

Becker: Go ahead.

Armstrong: I might just simply because the actual deployment of it...or employment of it...does require the correct execution of those formulas; and other than one particular error that is very, very difficult to understand unless you have been part of one of these conversations about the formulas. I mean, that you have to reverse-engineer the formulas to find out that the square root in that definition is missing, otherwise you'll end up with target image areas of an enormous size and be totally lost. You'll end up just having a goofy result. I mean, I think it could be argued, that you need to be able to apply the math to create the image. It could be argued that you can conceptually create what it is that we are conceptually defining, but it's more difficult to do that without a precise understanding of the relationship of targets of subject images and viewing windows.

Becker: Well, let me turn it against you, Jim. That's a good analysis. I think it's interesting, but let me turn it against you and say if that's true, then our August 2, 1999, filing doesn't provide enough disclosure to enable one of ordinary skill in the art to make this claim.

Bernstein: On Ray [Joa's]?

Becker: ~~CONNECT~~Right, what he...

Bernstein: Yeah, that's why we want to change it before August 10th.

Armstrong: You said the August 2nd filing. This is the one we just did.

Bernstein: No, the March 3rd filing you mean.

Utley: March 24th.

Bernstein: March 24th, whatever.

Becker: Well, I guess I'm going as early as I can, which is why we tried to file on Wednesday...which is why we filed on Wednesday, so we could get the priority on the provisional application which, if I recall, read very much like the March 2000 application.

~~S. Bernstein~~Armstrong: The one you're referring to is the original provisional from August of 1999.

Becker: Yeah.

~~S. Bernstein~~Armstrong: Saying that if my argument holds, we have nothing of solid validity in that particular document.

Becker: No, what I'm telling you is that that document won't provide priority to this claim. In other words, our priority date will be Wednesday of this year, not Wednesday of last year...or not...

S. Bernstein: Because that provisional didn't provide somebody with ordinary skill in the art the ability to replicate what we did?

Becker: That's exactly right.

~~Bernstein~~Utley: March 24th

~~Bernstein~~...isn't that the one we're looking for?

Utley: March 24th?

Bernstein: Oh, no, that's the...

Utley: We're looking for the August one.

Bernstein: No, I'm looking for the provisional this claims to.
<Two separate conversations going on at once; difficult to hear and follow...>

Becker: Let me ask you this...

S. Bernstein: Then that's to say--and maybe I'll question my own logic now--is it enough to say that somebody understands that in the viewing window that you create zoom and then create [] ability?

Becker: As long as we just...

Armstrong: That optimized the particular...

~~S. Bernstein~~Armstrong: And all we did was help to clarify...

Becker: I think that's pretty convincing. You know, you don't have to enable all the ways of doing it; you just have to enable essentially one way of doing it.

Bernstein: Okay. Despite all of this, I still want a firm yes or no.

Becker: I think was actually critically really finally getting to the issue.

Bernstein: No, yeah, we are.

Becker: Away from the rhetoric of accusations and...

Bernstein: Okay, okay, right, but...

Becker: And fear-mongering and calling the investors. I think we've gotten to...

Bernstein: Well, I mean, we've got to deal with things. These are real fears meaning we definitely have real issues. But looking beyond that, which is fine, I've got still an unanswered question: Does Ray [Joao's] set of claims change tomorrow, Monday, whatever, so that we can protect ourselves? Now you've agreed that's a good strategy, Doug's agreed that's a good strategy, but yet I hear no execution strategy, and that's what I want to make 100% sure that I can get as much of what we've discovered into Ray's incompetent work, and I will call it that, as possible. And your work is far more superior. These are some issues, but, you know, there's issues...it's a large thing to grasp, and we'll get through it. But I want to change what Ray [Joao's] done, and that was my understanding that we're going to take the claims that we've discovered in this application you just filed and put them into that one, and that the worst that's going to happen is that the examiner will approve the earlier one of Ray and yours will fall away, the second one.

Armstrong: Did somebody just join this call?

Bernstein: No.

Armstrong: Did you hear that beep, beep, beep?

Becker: I did. I don't know if anyone has joined.

Bernstein: Si? Si?

Armstrong: Maybe he got off.

Bernstein: Yeah.

Armstrong: Okay.

Becker: Well, let's do this, Eliot. Let's say that...I know you are concerned about the August 10th date, why don't we say that we will make some amendments to the claims in the prior filings you're referring to, and we'll clean that up as best we can and make sure that we have the claim amendments...

Bernstein: <Aside to Utley> This is the one we filed?

Utley: <To Bernstein> That's the provisional.

Bernstein: <To Utley> That's the provisional?

Utley: <To Bernstein> Right.

Armstrong: What about correcting the math in the one from two days ago?

Becker: Yeah, then again, I don't know what was filed; and again it appears...I really need to consult with Doug on that.

Armstrong: Yeah, but if we're of understanding what we talked about today is what he filed, and I believe that's it, then what do we do to correct that? We should probably correct that by the 10th as well.

Becker: Okay. Right. That actually was more important with the 8/10 date because these changes are considered to be better, then we need to get a filing out by that date.

Armstrong: Okay.

Bernstein: And Steve, just to remind you on this point, I still definitely for a comfort level and to keep accusations at bay, just a letter of what's occurred, what my risks are, and what our strategies for execution are on this filing relating to as well fixing this one as well as relating it to Ray [Joao's]. If you could write that clearly to us, that gives us a lot of comfort level.

Becker: All right. Hopefully what I explained today about priority will help.

Bernstein: Well, this gives it the final touch of you can rest assured, I've got it in writing. That's what I need to comfort me that I've got a strategy, that everybody's on the same page, so to speak, so that page doesn't shift, so that we don't get off that strategy and we all stay focused on that one sheet. So that would be critical. And what is our next due date? Is that on the 10th or the 8th or something, or am I missing...

Utley: Well, the only reason the 10th has any potential bearing is because that's when the test license...

Bernstein: I'd like to beat that here, on this claim, because if we can beat the 10th here on Ray [Joao's] filing, that's what we need to do there, right?

~~Becker~~Armstrong: That's actually not an important date for Ray [Joao's] filing.

Bernstein: Yes, it is.

~~Becker~~Armstrong: An important date for the filing that we did a few [weeks? days?] ago.

Bernstein: No, no, it's the same date. Commercialization is commercialization, and how it relates is the same here to us.

~~Becker~~Armstrong: Okay.

Bernstein: You know what I mean?

Becker: Yeah, I guess I do.

Armstrong: I'll make just one other general comment, Steve. Everyone else knows this, but you don't. I was just brought into this process Tuesday as the first time I've ever reviewed any patents. I've held them for Eliot in the past but never reviewed them; and was probably surprised with what I found was that it was an extremely important and at least, to my understanding, we had very little time to get it right, and we're now paying the price, of course. To the extent that that can be avoided in the future through careful planning, updates, and contingencies, I suggest we have a plan for that.

Becker: Yep.

Armstrong: So. Just an overall comment.

Becker: That's a good comment. I think it's important to get things done as early as possible, and we certainly have tried to do that throughout the process.

Bernstein: Steve, can you do me one last favor?

Becker: Yes?

Bernstein: Shoot over to Jim the three video patents we filed. He's signed a disclosure on it—the one you gave us—encompassing him for all patents.

Becker: All right. Jim, what's your role?

Armstrong: I'm the Director of Sales and Marketing.

Bernstein: But he's also a shareholder.

Becker: Okay.

Armstrong: I've been with this since before anybody else.

Becker: I see.

Armstrong: It was just basically me and Eliot and Guy before anybody else started, but I've never been involved in the patent review.

Becker: Now you want me to send a copy of the filings...the video filings?

Bernstein: Yeah. Can you just fax them to him?

Becker: Sure. Let me make sure I've got this right. Okay. We've got three...no, five applications, about 100 pages. Is that fine?

Armstrong: Yes.

Bernstein: We have four. Sorry.

Armstrong: Are they emailable, or no?

Becker: Yeah, they are emailable.

Armstrong: Let's do that instead.

Becker: But then you don't have the figures. We can email....

Armstrong: Email those, and then just fax the figures?

Becker: Yeah.

Armstrong: Okay, cool. The fax number is 732-747-5569. Email is jim@iviewit.com.

Bernstein: And there's five video patents now. Correct, Steve?

Becker: I'm looking at my chart here: three US and three corresponding PCT [] applications that we wrote, and then there's a PCT video playback—that was the video playback invention—

Bernstein: Right.

Becker: And I think that's all.

Bernstein: Great. Let's get those out to Jim real quick. I'd like him reviewing those by the 8/10 date. Any changes, we're obviously going to try to revert to keep our 8/10 day as our commercialization day, giving us a little buffer if we're wrong.

Becker: All right.

Bernstein: You know what I mean? I mean because we don't know how people will interpret in the end what [Centrec? Centrack?] was, but to beat it would definitely give us a greater argument.

Becker: Yep.

Bernstein: So, all right, we'll pick this up...you're going to make those changes on this patent, correct?

Becker: I'm going to wait until I speak with Doug.

Bernstein: Okay, great.

Becker: To find out what was actually filed, and then we'll decide how best to proceed with amending that.

Armstrong: Steve, one more clarification. Did you say we have or have not had successful closure on the signing over of inventors' patents to the company?

Becker: I can't speak to that; Doug is working on that.

Armstrong: Okay, will you put that in our list of things to do...or your strategy that that gets completed?

Becker: Yeah.

Bernstein: Yeah, and B, I just signed as well as Brian and Jude and everybody. It's a large, thick document, so Doug should have an update, Steve, as to what is exactly signed. I think it was everything, correct? And we've got everybody here.

Armstrong: I've got emails that indicate that that was all done nine months ago.

Bernstein: No, it was, B, but then we filed patents; and then we thought the past was done, and now these new ones had to be done, so he came here, there was notaries here...it was, you know, it was a lot, but let's get an update on it.

Armstrong: I just want to see it in writing

Utley: In addition to that, everyone has individually signed a separate agreement with the company, conveying assigning to the company any intellectual property that's created as a result of their employment.

Armstrong: That I know. The key inventions, I just want to see that they've signed over because that's the value of the company right there. That's what I own stock in.

Bernstein: Correct. Okay. So let's get an update, and I think we're pretty close.

Armstrong: Okay.

Becker: Eliot, why don't we go through the list of things that you've asked me to do so we can be perfectly clear on this?

Bernstein: Okay.

Becker: The first is to amend Ray's PCT application, at least the claims, so that we have a good filing there, at least based on whatever Ray has in his specification. That's task #1.

Bernstein: Claims plus any additional language that's not new matter.

Becker: All right.

Bernstein: Okay.

Becker: You want a letter describing the...what was omitted or what was incorrect in this application filed Wednesday and to what extent that may have any bearing on rights.

Bernstein: Correct.

Becker: And also a course of action we feel is necessary to file new applications to amend these, make these corrections, or if there's something we feel we can do in an amendment that would not introduce new matter.

Bernstein: And our strategy going forward on this. By the way, that would mean our strategy as well on the video, correct? Because if there needs to be changes and the date did stick at 8/10, we need to make any changes we find by 8/10, correct?

Becker: Only if the changes are so substantial that they would jeopardize the ability of one skilled in the art to understand.

Bernstein: Okay, so critical errors. Okay. If we find them.

Becker: And that's why I think, you know...and if you're describing in your specifications how to make one, how to do it, provide most of the details. I mean, we've done a very detailed job of ...

Bernstein: No, I agree. I'm not...I agree. I see all that here.

Becker: Any time whatever we can get out of you guys in terms of describing how it works...that, in there when you describe a claim and there's an error, you know, there's an error in the math, will that dramatically affect and make it so somebody can't practice the invention at all, I don't know.

Bernstein: Right. So if it's critical by 8/10, it should be resolved. Correct?

Becker: With the video application, it doesn't help for us to go back and look at those. You guys go back and look at those and see if there's anything in there that you don't like.

Bernstein: Right. And if we find something in the claim, for example, that we don't like, we need to amend it by 8/10, right?

Becker: No.

Bernstein: Why?

Becker: Because the claims have to be supported by the specification as filed back on those dates, which were sometime in June...

Bernstein: Okay, but let's say all that fits, we also have the commercialization date.

Becker: The commercialization date...

Utley: I though <inaudible comment to Bernstein>

Bernstein: So we can go change the claims.

Becker: Typically [] prosecutions, as long as they're still supported by the specifications filed...

Bernstein: Right. So if we find any mistakes, we should change them, correct? In the video patents?

Becker: Yeah, as a general principle, that's a good idea.

Bernstein: Okay, good. All right. I think that sums up what we need. Send the letter to Si, myself, and Brian.

Becker: That's not a complete list of what you asked for me to do.

Bernstein: What else have we got? Sorry?

Becker: You've asked me to email to Jim Armstrong the three video applications and the playback application--the one playback application--

Bernstein: Right.

Becker: Now with respect to the video application, we have both PCT and US filings. Do you want us to send both of those? They've essentially identical--in fact, they are identical except the...

Bernstein: No. Just one.

Utley: Send the US.

Becker: All right, we'll send the US versions of those two. And we'll fax the figures. And element #4...Item #4 is to provide a written letter to Jim Armstrong regarding the assignment status of...

Bernstein: Well, that's to everybody. That's to Brian, Si, myself, Jim.

Becker: Brian, Si, Eliot, and Jim.

Bernstein: Right. Just giving us the update of where we are.

Armstrong: I think it's helpful to communicate to the shareholders.

Bernstein: Well, let's get it first, then we'll communicate at discretion, but I think we're there.

Becker: Okay, then, in terms of general things going forward: Eliot needs to be cc:'d on all correspondence relating to patents. Should we continue our practice of sending things to Brian?

Bernstein: Yeah.

Becker: All right, we'll continue our practice of sending things to Brian and cc:ing Eliot with copies.

Bernstein: Right, and I'd appreciate if all that email comes to iviewit.com. Therefore, I have copied records.

Becker: Are you saying you only want us to correspond with you via email, not letters? Not...

Bernstein: No, but if it is emails, iviewit.com emails because that gives me complete copied records on tape backups.

Armstrong: ~~De~~—don't send anything to any of us at a domain name other than iviewit.com, if you send it in email. |

Becker: That's the instructions?

Bernstein: Right.

Armstrong: Correct.

Becker: Don't send to any other email address besides one of your names at iviewit.com.

Bernstein: Correct.

Becker: Okay. Anything else in addition to those items?

Bernstein: Nope. Steve, I appreciate your taking the blunt end of this, I really do.

Becker: Well, I just wish you would not...

Bernstein: Well, we freaked out a little bit. You can understand that there's a reason to freak...I'm not just making this up. So based on that, let's try to resolve and move forward. |

Becker: Anything else?

Bernstein: Nope. Thanks very much.

disagreement as to ownership of the intellectual property.

By MR. SELZ:

Q. There was a dispute?

A. Yes.

Q. Did you ever advise the owner of Diamond Turf that you were going to patent these intellectual properties under your own name?

A. I did.

Q. Did you do that prior to patenting those or after?

A. They were never, they were not patented.

Q. Okay. They were not patented. Was the application for patent made?

A. No.

Q. Since your employment with Iviewit.com or Iviewit, yeah, dotcom, LLC, what patents have you taken out in your name, sir?

A. I have not taken out any patents in my name, other than what has been appended to patents filed by Iviewit and assigned to Iviewit.

Q. Okay. So they're all patents held by Iviewit and you're named as a co-inventor; is

that what it is?

A. Yes.

Q. And Iviewit would be listed as a primary patent holder; is that how it would be?

A. They were assigned to Iviewit.

Q. They were assigned to Iviewit. Are you aware of any police report that was ever filed involving Mr. Mike Real and yourself?

MR. PRUSASKI: Objection, relevance.

By MR. SELZ:

Q. Go ahead and answer the question, if you can, sir.

A. There was a dispute over the nature of the equipment that I bought from Iviewit as --

Q. Well, that really wasn't my question. My question was are you aware of a police report? And it's really a yes or no type of answer.

MR. PRUSASKI: Objection, relevance.

THE WITNESS: I believe there was a report.

By MR. SELZ:

Q. Okay. Do you know who filed that report?

A. Iviewit filed that report as far as

Dear Eliot:

Being e-mailed (and enclosed herewith) are six (6) Powers of Attorney for the subject PCT Patent Applications, one Power for each inventor named in any one or more of the PCT patent applications, and one Power for the corporation, Iviewit Holdings, Inc. Three of the Powers require your signature, as follows: (i) one by you in your individual capacity; (ii) a second by you in your capacity as designee of the corporation to sign on behalf of Brian Utley (we hope the PCT Office will recognize Utley's having granted a Power of Attorney to his corporate employer); and (iii) a third by you for the corporation in your capacity as its Secretary. Kindly sign where your

signature is indicated on the three Powers of Attorney and return the original executed Powers to our office via mail (we need to have each Power with an original signature). Also fax each Power to us at (310) 820-5988, to expedite the process.

As we discussed, we request that you also forward each of the three remaining Powers to Jude R. Rosario, Jeffrey S. Friedstein and Zakirul A. Shirajee, respectively, for their signatures. Kindly instruct each of them to execute the Powers and to return the originals to our office by mail. In order to expedite the matter, request each of them to fax a copy to us, if possible.

If you have any questions, please feel free to contact my Assistant, Jan Gass. We appreciate your attention to getting the subject Powers executed and returned to us. We will then attend to their filing with the PCT Office.

Best personal regards,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN, LLP

Enclosures

cc: Ross Miller (w/Enclosures via E-Mail) ✓

P.S. to Ross Miller:

Ross, please attend to getting a Board Resolution appointing Eliot as the corporation's designee for signing the subject Power on behalf of Brian Utley. We talked about this in the context of giving Eliot comfort; however, the PCT Office may well request such a Resolution (in addition to a copy of Utley's Employment Agreement, which we already have).

Re: Provisional Patent Application No. 60/233,341
(Our File No. 57103/0123)

Dear Mr. Utley:

I sent you an e-mail message concerning the referenced application. As stated in that message, on September 18, 2000 a provisional patent application was filed on your behalf. The title of the application is "Zoom and Pan Imaging Design Tool". The application number is 60/233,341. Our file number is 57103/123. Mr. Boehm informed you of the filing of the provisional application in a letter dated September 22.

The application was filed without paying a filing fee in accordance with Patent Office rules that permit this procedure. In my letter of February 26, 2001, I advised you that the filing fee must be paid in order to maintain the pendency of this application. I received no response to my letter.

The time for paying the filing fee may be extended until June 4 at the latest by paying substantial extension fees to the Patent and Trademark Office. If you choose to send in the fees, I am forwarding to you a copy of the form that must be returned with your reply to the Patent Office, the Notice to File Missing Parts.

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION
FILED UNDER 37 CFR 1.53(c)
Filing Date Granted

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- **The balance due by applicant is \$ 200.**

*A copy of this notice **MUST** be returned with the reply.*

Re: U.S. Patent Application No.: 60/233,341
Filing Date: 8/02/2000
Title: Zoom and Pan Imaging Design Tool
Inventor(s): Utley, Brian G.
Our Ref.: 57103/123

Dear Mr. Utley:

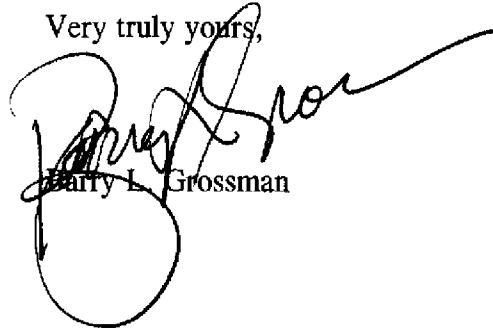

A payment is due to the Patent Office in order to keep the referenced application pending. In order to expedite filing of the application and to defer payment of the filing fee, the referenced application was filed in the Patent Office without paying the filing fee. Patent Office rules permit this procedure. The filing fee is now due. In order to avoid abandonment of the application, we will need to file the executed Declaration with the necessary fees on or before **April 04, 2001**. If you want to maintain this application, please send us a **certified check** in the amount of **\$420.00** as soon as possible so we can get this taken care of in an orderly fashion.

Because of the long overdue status of your account, we cannot pay the fees on your behalf without advance payment in full. We will require a certified check or if you prefer you may wire transfer the payment. I will send you account information if you want to use a wire transfer.

Mr. Brian G. Utley
February 26, 2001

DECL FEE

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 200.

A copy of this notice MUST be returned with the reply.

FILING RECEIPT

OC00000005592299

Date Mailed: 12/04/2000

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Continuing Data as Claimed by Applicant

Foreign Applications

If Required, Foreign Filing License Granted 12/01/2000

Title

Zoom and pan imaging design tool

Preliminary Class

Data entry by : WASHINGTON, JAMES

Team : OIPE

Date: 12/04/2000

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15 (b).

PLEASE NOTE the following information about the Filing Receipt:

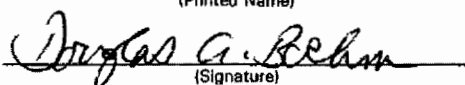

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

PROVISIONAL PATENT APPLICATION
TRANSMITTAL

Assistant Commissioner for Patents
Box PROVISIONAL PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(c) is the provisional patent application of:

→ Brian G. Utley
 1930 S.W. 8th Street
 Boca Raton, Florida 33486

Enclosed are:

- Specification, Claim(s), Abstract, and Figures(¹¹²~~105~~ pages).
- Assignment of the invention to lviewit.com, Inc..
- Small Entity statement.

The filing fee is calculated below:

	Rate	Fee Totals
Basic Fee	\$150.00	\$150.00
[X] Small Entity Fees Apply (subtract 1/2 of above):	=	\$75.00
TOTAL FILING FEE: =		\$75.00

- [] A check in the amount of \$75.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

Date 9/18/00

U.S. Provisional Patent Application
Title: Zoom and Pan Imaging Design Tool
Inventor(s): Utley, Brian G.
Our Ref.: 57103/123

Dear Brian:

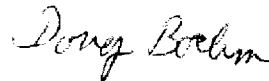

Enclosed for your information and files are copies of the above-referenced patent applications that were filed with the U.S. Patent and Trademark Office on September 18, 2000. As soon as we receive the application numbers and confirmed filing dates, we will forward this information to you.

If you have any questions regarding this application, please do not hesitate to contact me.

eliot
Line

No carbon copy to ANYONE, despite repeated requests in the transcripts to send cc to others. Company cannot verify this as it was not in the Company files until transfer of files from Foley

Very truly yours,

Douglas A. Boehm

Enclosure(s)

Boehm: Well, then, talk to Brian because we were corresponding with Brian on that, and I don't know why you weren't getting it if that was the case, and I don't know which letter went to who, blah, blah, blah, but I do know that we mentioned that we didn't understand the math, and we were up to the third draft, if I recall; and you're right, Jim, that it shouldn't have taken...it shouldn't have been last minute and you should have had time to do it. I totally agree, but I can't take total blame for that...

Bernstein: But wait a minute. Steve has fundamental errors on understanding the math, and yet we're going to file it with him having math problems?

Boehm: It's your duty to either help us to understand...

Bernstein: But then I've got a point. We did help you. We sat on the phone for an entire day, walked through this...

Boehm: The day of the filing you mean?

Bernstein: And if this math is still wrong, I mean, there's something really fundamentally wrong here.

Armstrong: Let me check it again.

Bernstein: Yeah, let us call you back in a while. Is Steve in today, too?

Armstrong: I didn't get involved until Wednesday.

Boehm: Right.

Armstrong: I'll tell you one thing, Doug, that you should do as just a matter of course going forward. Eliot being the owner of the company and the person that Brian reports to is any future email correspondence should always be copied to him. That's kind of just a standard practice we all do in the company.

Boehm: To copy?

eliot Note	3/10/2004 2:19:24 AM
Boehm directed to copy company on patents and other matters	

Armstrong: Yeah.

Boehm: Okay. I didn't know that.

Bernstein: You ask me to review and sign these patents, and you're not sending me information. What do you mean.

Armstrong: I think had we known that there was a question of validating Brian's math, Eliot would have brought me in a lot earlier.

Bernstein: I would have brought a mathematician in. I mean, this is ridiculous.

Armstrong: Yeah, I'm just a friend that's good at math, not a mathematician.

Boehm: Right, well.

Armstrong: Go to your meeting. We're going to check this patent ~~stats~~-out, and we'll talk to you letter.

Boehm: Well, you've got to talk to Brian, too.

Armstrong: Yeah.

Bernstein: I think because I now seriously have to report a lot of things to a board of people that we're going to have to have a meeting at some point either today or Monday with a few of the key people in the company who are investors, etc., so that they understand what they are investing or not investing in.

~~Becker~~Armstrong: Don't jump to conclusions.

Bernstein: No, I'm not, but if this is correct, we've got some fundamental things that need to be discussed.

1 training that you've had or maybe you -- you did 113

2 indicate that you had any degree in mathematics.

3 Is that something that you have some experience

4 from from some other portion of your employment

5 or background?

6 A. I have training and experience in

7 mathematics.

8 Q. I'm sorry.

9 A. I say I have training and experience

10 in mathematics.

11 Q. How about in the scaling video

12 invention; is that part of what you've already

13 described?

14 A. That is readily derived from a

15 mathematical background.

16 Q. How about the remote control video

17 applications?

18 A. That's different.

19 Q. Okay. Now going back to --

20 A. What --

21 Q. -- the patent dealing specifically

22 with remote control applications.

23 A. What I did there was I established

24 the fact that the design point that Eliot had

25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Eliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

1 Q. Okay. And the correlation was for 115
2 development of future cameras or was that simply
3 an observation that was made?

4 A. It was an observation that current
5 camera technology incorporates zoom and pan
6 technology.

7 Q. Okay. How about any patent or
8 patent applications dealing with scales video or
9 zoom video imaging applications other than what
10 we've already discussed?

11 A. Without looking, and I apologize for
12 this, without looking at the specific patent
13 filings by name and number, I think, you know,
14 we're not really going to be able to get much
15 further on this discussion.

16 Q. Okay.

17 A. I don't want to put you off at all,
18 but I just want to say that to pursue a detailed
19 questioning in this specific area, I need to be
20 able to refresh my mind with what is in the
21 record.

22 Q. Okay. And are those documents that
23 you have in your possession someplace?

24 A. No.

25 Q. You don't have any of the paperwork

NOTICE TO FILE MISSING PARTS OF PROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(c)

MP
RESPONSE DUE 02/01/2001
DECL FEE

Filing Date Granted

An application number and filing date have been accorded to this provisional application. The items indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 150 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$50 for a non-small entity, must be submitted with the missing items identified in this letter.
- Small Entity Statement is missing.
- The balance due by applicant is \$ 200.

*A copy of this notice **MUST** be returned with the reply.*

Re: Transfer of IP files for IVIEWIT.COM

Dear Mr. Meltzer:

As you may recall, I am the patent attorney at Foley & Lardner that is currently handling the Iviewit.com IP matters that were previously handled by Ray Joao of your firm.

I recently received the following correspondence from your firm: (1) the original Assignment recorded in the United States Patent and Trademark Office (USPTO) for your Docket No. 5865-8 (U.S. Provisional Patent Application No. 60/169,559); and (2) the USPTO Filing Receipt (copy attached) for your Docket No. 5865-1 for Application No. 09/522,721. Although I sincerely appreciate your firm's diligence in continuing to forward Iviewit materials to me, this latest correspondence raises some very serious issues with respect to the Iviewit.com IP matters that were supposed to have been transferred to Foley & Lardner.

I was not previously told about this U.S. Non-Provisional Application being filed (item 2 above). It does not appear in any of the correspondence previously sent to Foley & Lardner. This raises the question of exactly what was filed in the U.S. Patent and Trademark Office, since I do not have a copy of any filing papers for this application. Was a U.S. Declaration filed? What specification and claims were filed? Was an Assignment filed for this application? I must have this information in order to take over prosecution of this application.

More importantly, however, this raises the question of whether any other provisional or non-provisional applications have been filed in the United States or any other country. Both the client, Brian Utley, President of Iviewit.com, and myself have previously asked your firm to transfer all of the Iviewit.com Intellectual Property files to me. (See attached letter to you dated April 28, 2000.) When the files that were sent to me were incomplete, I sent an e-mail (copy attached) to Dawn Laffin of your firm, asking her to look for other Iviewit matters. I subsequently requested that Nicole, Ray's former secretary,

FOLEY & LARDNER

Mr. Lewis S. Meltzer
June 6, 2000
Page 2

double-check that there were no other miscellaneous files that were not on the list of applications (also attached). Now I find out that, after three or four separate requests, all of the Iviewit patent matters were not transferred to us.

I formally request that you have your firm's Docket Administration Department review all of Ray Joao's files to ensure that all of the Iviewit.com materials have been transferred to me. Please forward all letters, memorandums, faxes, e-mails, notes, CD's, disks, and other correspondence between Iviewit.com and your firm, and between any third parties and your firm on behalf of Iviewit.com. It is particularly important that I know which patent applications were filed and what correspondence was submitted to the U.S. Patent & Trademark Office before the expiration of a critical date. Otherwise, the client could possibly lose patent rights. Please confirm that the attached "Iviewit.com Patent Portfolio" table, which lists the patent applications filed for Iviewit.com by your firm, is accurate and complete.

I also request that you contact Ray Joao to confirm which applications were filed in what countries and whether or not Ray has any additional Iviewit correspondence or materials that were not transferred to Foley & Lardner.

Furthermore, the client requests that I obtain a written confirmation from both you and Ray that all files, materials, and correspondence have been transferred to Foley & Lardner.

Please confirm receipt of this facsimile and let me know that these matters will be handled promptly and appropriately.

Very truly yours,

Douglas A. Boehm

Re: Transfer of IP files for IVIEWIT.COM

Dear Mr. Meltzer:

As you are aware, Mr. Brian Utley, President of IVIEWIT.COM, LLC, has requested in a previous letter that all Intellectual Property files for IVIEWIT.COM be transferred from Meltzer, Lippe to Foley & Lardner. Please have the files forwarded to me at the above address as soon as possible. Upon receipt of the IVIEWIT.COM files, Foley & Lardner will be responsible for taking action in these matters.

These Intellectual Property files include the eight provisional patent application matters listed on the attached sheet, as well as any other Intellectual Property matters that may be missing from this list. Furthermore, I would sincerely appreciate it if you could include copies on disk of the electronic word processing files for these matters, so the eight patent applications won't have to be retyped. Any electronic word processor format will suffice.

Of course, if any questions or problems arise, please do not hesitate to contact me. I thank you in advance for your cooperation.

Very truly yours,

Douglas A. Boehm

Subject: lviewit.com Files

Dawn --

As I mentioned on the telephone this afternoon, I received your Federal Express package this morning containing the Meltzer, Lippe files for lviewit.com. The package contained 7 folders corresponding to your docket numbers 5865-1,3,4,4.1,5,6, and 7. However, the file folder for your docket no. 5865-8 is missing. Furthermore, not all of the paperwork for the PCT application (your docket no. 5865-10) was included in the first file 5865-1 (which is the PCT's parent case). Is there a 5865-10 file also?

During our phone conversation, you agreed to review your docket and files for 5865-8, 5865-10, and any other 5865 matters for lviewit.com tomorrow, and forward these files to me right away.

Thanks for your assistance.

--Doug

Ray Joao

Ray, there are major missing items in docket's 1+6:

1. Claims do not reference stitching
2. Process is amended as shown on the diagram
3. The relationship between the enhanced digital image and the zoom and pan function together with controls is not clear
4. The description and claims stop at the production and loading of the image.

5. Object model Brian

Never saw this till all these books

Re: PCT Patent Application for System and Method for Providing an Enhanced Digital Image File
Inventor: Bernstein
Our Ref. No.: 57103/120

Brian:

During our brief telephone conversation today, you provided a few comments in response to my letter to you dated July 21, 2000. These comments were based on your review of the prior provisional applications, and are summarized below.

1. The step of "enlarging" is not essential for all embodiments of the invention.
2. The aspects of zooming and panning, and the function of the applet must be described in greater detail. ←
3. The disclosure relating to acquiring a photograph of a film video should be removed. However, the disclosure relating to processing one frame of a video according to the process steps of the invention should be retained.
4. In the provisional patent application having our reference number 57103/108, the flowchart in FIG. 2A does not match the corresponding description in the specification. Correction is needed.

5. Again, in the application for 57103/108, the claims in their current form may not be of the proper scope and should be revised.
6. You commented that the prior-filed PCT applications relating to enhanced video files did not specifically mention potential applications in radiographic images, X-rays, MRIs, etc. Regardless of whether these specific applications are supported, additional subject matter cannot be introduced to the prior-filed PCT applications unless additional patent applications are filed. Please advise if you would like us to file patent applications directed to these specific applications. *IMAGE / and a video but we will process*

We discussed the possibility that the provisional applications currently on file may not provide sufficient disclosure to support all of the claims we may eventually want to file in the PCT patent application we are currently preparing, and, therefore, the sale of images using this process in September, 1999 may bar patentability in some foreign countries. You instructed us to proceed with the PCT filing to preserve whichever foreign filing rights are available. ←

Accordingly, comments 1-5 will be incorporated in the above-referenced PCT patent application. If you have any further questions or comments, please do not hesitate to contact me.

CORRECTED VERSION - CORRECTED ON 5/14/2003
Transcription of Telephone Conference
Conducted July 31, 2000

Participants:

Simon Bernstein, Eliot Bernstein, Maurice Buchsbaum,
Brian Utley, Doug Boehm, Chris Wheeler

Note: Square brackets [] are used to indicate inaudible or indecipherable text. Text found inside brackets indicates transcriptionist's best guess. Since speaker names are not specifically identified, transcriptionist has made an attempt to identify based upon comments made in conversation but cannot guarantee that each speaker has been accurately identified. Note also that this recording has numerous instances of participants speaking at once or carrying on simultaneous side conversations that make it difficult to follow and transcribe the entire line of discussion.

Utley: <begins midstream>...status of the original digital image filings, and basically the fact that the original filings do not cover the full subject matter of the imaging technology; and to wit, one of the omissions, in particular in reading the claims section of the provisional and the formal filing, relates to the zooming and panning capability that is inherent in the technology. This has become a topic due to the fact that we are currently in the second phase of filing imaging patent protection which is driven by the provisionals that were filed later last year, between August and December of last year. So the concern that were expressed by Eliot in reviewing this is that this omission of the zooming and panning capability was attributable to a failure, for whatever reason, on the part of Ray Joao, the patent attorney of record, in constructing and putting together the provisional and formal filing<tape cuts out here> did I say it is that right Eliot

E Bernstein I believe so

Utley Is that your understanding

E Bernstein Correct

Utley The purpose of this meeting is to review the facts and I think there are two particular points that are ...that are important to moving ahead. The first is: "Given that the filings are what they are, and given what we know about the filing which is scheduled to take place this week on Wednesday, what means do we have to correct the situation; and given whatever corrections we find, what then is the impact or exposure to iviewit based upon what actions we can take. Then, lastly, what, if any, recourse might iviewit have vi sa vi the omissions in the original filings Are there any other issues, Doug?

Bernstein: Yeah, just correcting back to Ray Joao's work of the formal filing that he filed. Do we have a copy of that?

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PLAYING
A DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,297, filed June 3, 1999, U.S. Provisional Application No. 60/155,404, filed September 22, 1999, U.S. Provisional Application No. 60/169,559, filed December 8, 1999 and PCT International Application No. _____, filed June 2, 2000.

FIELD OF THE INVENTION

The present invention relates generally to video imaging. More specifically, the present invention relates to a system and method for providing high quality digital video files for streaming across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file first. A video player decompresses and plays the data as it is transferred to a user computer over the World-Wide Web. Streaming video avoids the delay entailed in downloading an entire file and then playing it with a plug-in application. Streaming video requires a communications connection (e.g., a network, Internet, etc.) and a computer powerful enough to execute the decompression algorithm in real time.

TRANSMITTAL

Assistant Commissioner for Patents
Box PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(b) is the nonprovisional utility patent application of:

Eliot I. Bernstein
Zakirul A. Shirajee

eliot Note
Jude Rosario is missing

Enclosed are:

- [X] Specification, Claim(s), and Abstract (29 pages).
- [X] Informal drawings (3 sheets, Figures 1-3).
- [X] Unexecuted Declaration and Power of Attorney (4 pages).
- [] Assignment of the invention to lviewit.com, Inc..
- [] Assignment Recordation Cover Sheet.
- [] Check in the amount of \$40.00 for Assignment recordation.
- [] Small Entity statement.
- [] Information Disclosure Statement.
- [] Form PTO-1449 with copies of ___ listed reference(s).

The filing fee is calculated below:

	Claims as Filed	Included in Basic Fee	Extra Claims	Rate	Fee Totals
Basic Fee				\$690.00	\$690.00
Total Claims:	26	- 20	= 6	x \$18.00	= \$108.00
Independents:	3	- 3	= 0	x \$78.00	= \$0.00
If any Multiple Dependent Claim(s) present:				+ \$260.00	= \$0.00
				SUBTOTAL:	= \$798.00
[]	Small Entity Fees Apply (subtract 1/2 of above):				= \$0.00
	TOTAL FILING FEE:				= \$798.00

- [] A check in the amount of \$798.00 to cover the filing fee is enclosed.
- [X] The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- [] The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System And Method For Playing A Digital Video File

(Attorney Docket No. 57103/115)

the specification of which (check one)

X is attached hereto.

___ was filed on _____ as United States Application Number or PCT International Application Number _____ and was amended on _____ (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code §119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or §365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date

I HEREBY CLAIM the benefit under Title 35, United States Code, §120 of any United States application(s), or § 365(c) of any PCT international application designating the United States of America, listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT International application in the manner provided by the first paragraph of Title 35, United States Code, § 112, I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date of the prior application and the national or PCT international filing date of this application.

U.S. Parent Application Number	PCT Parent Application Number	Parent Filing Date	Parent Patent Number

I HEREBY APPOINT the following registered attorneys and agents of the law firm of FOLEY & LARDNER to have full power to prosecute this application and any continuations, divisions, reissues, and reexaminations thereof, to receive the patent, and to transact all business in the United States Patent and Trademark Office connected therewith:

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PLAYING
A DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,297, filed June 3, 1999, U.S. Provisional Application No. 60/155,404, filed September 22, 1999, U.S. Provisional Application No. 60/169,559, filed December 8, 1999 and PCT International Application No. _____, filed June 2, 2000.

FIELD OF THE INVENTION

The present invention relates generally to video imaging. More specifically, the present invention relates to a system and method for providing high quality digital video files for streaming across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file first. A video player decompresses and plays the data as it is transferred to a user computer over the World-Wide Web. Streaming video avoids the delay entailed in downloading an entire file and then playing it with a plug-in application. Streaming video requires a communications connection (e.g., a network, Internet, etc.) and a computer powerful enough to execute the decompression algorithm in real time.

Our Ref.: 57103/11

eliot
Note

This sent months after filing for review by inventors of first draft? Dicks VA Bar response said all inventors had time to review and sign.

Review of Drafting a Digital Video File

Dear Brian:

Enclosed please find the final draft of the above-referenced patent application which was filed with the U. S. Patent and Trademark Office on June 5, 2000 as Application No. 09/587,026. I have also enclosed various formal papers which require the inventors' signatures.

Please have the inventors thoroughly read the patent application, including the specification, claims, and drawings, to ensure that it provides an accurate and complete description of the invention. The written description should be sufficiently complete to enable someone of ordinary skill in the art to make and use the invention. The application must describe the "best mode" contemplated by the inventors for carrying out the invention, i.e., in order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret. If, after review of the application, the inventors find that anything in the application is incomplete, inaccurate, untrue, or possibly misleading, please contact me immediately so we can discuss the matter. If any typographical, grammatical, or other minor formal errors are found, please have them noted in a separate memo to me such that I can correct them by amendment at a later date.

If everything appears to be in order, please have the inventors read, sign, and date the Declaration and Power of Attorney form at the colored tags. By executing this document, they will be verifying the originality of their invention and acknowledging their duty to disclose to the U.S. Patent and Trademark Office any information of which they are

ESTABLISHED 1842

A MEMBER OF GLOBALLEX WITH MEMBER OFFICES IN BERLIN, BRUSSELS, DRESDEN, FRANKFURT, LONDON, SINGAPORE, STOCKHOLM AND STUTTGART

Mr. Brian G. Utley
July 27, 2000
Page 2

aware that could be material to the examination of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Note that the Declaration is signed under penalty of perjury, so careful consideration should be paid to its contents before signing.

Each inventor should also read, sign, and date the enclosed Assignment and Agreement, which must be executed in the presence of a Notary Public. By executing the Assignment, they will be acknowledging their obligation to Iviewit Holdings, Inc. by assigning all their rights in the invention to the company.

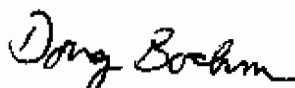

After the inventors execute the formal papers, please return the fully executed documents to me as soon as possible. You may keep the copy of the patent application for your records.

Now that the patent application is on file, any device covered by the claims of the application may be marked "Patent Applied For" or "Patent Pending" or an abbreviation thereof. This "Patent Pending" marking is not mandatory, as it only serves as a cautionary warning to would-be competitors that the device may be subject to patent protection in the future. However, this marking should be continued only as long as the application is still pending in the United States Patent and Trademark Office. If the application issues as a patent, the appropriate patent number should replace this marking. If the application should become abandoned and this is the only application pertinent to the device, then the marking should be eliminated entirely.

If you have any questions regarding any of the above, please do not hesitate to contact me.

eliot Note
No copies to anyone at Company or inventors

Very truly yours,

Douglas A. Boehm

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION
FILED UNDER 37 CFR 1.53(b)
Filing Date Granted

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$ 690 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CFR 1.27).
- Total additional claim fee(s) for this application is \$108.
 - \$108 for 6 total claims over 20.
- The oath or declaration is unsigned.
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 928.

- [X] Copy of Notice to File Missing Parts (Part 2 of Form PTO-1533)
- [X] Applicant is entitled to Small Entity status
- [X] Check in the amount of \$474.00 in payment of \$355.00 Basic filing fee, \$54.00 additional total claims fee, \$65.00 late filing fee (37 C.F.R. § 1.16(e)) enclosed
- [] Please charge Deposit Account No. 06-1447 in the amount of ___ in payment of surcharge fee (37 C.F.R. § 1.16(e))

The Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System And Method For Playing A Digital Video File

(Attorney Docket No. 57103/115)

the specification of which (check one)

 is attached hereto.

 x was filed on June 5, 2000 as United States Application Number 09/587,026.

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or § 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date
60/137,297	June 3, 1999
60/155,404	September 22, 1999
60/169,559	December 8, 1999

I HEREBY CLAIM the benefit under Title 35, United States Code, § 120 of any United States application(s), or § 365(c) of any PCT international application designating the United States of America, listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT International application in the manner provided by the first paragraph of Title 35, United States Code, § 112, I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date of the prior application and the national or PCT international filing date of this application.

U.S. Parent Application Number	PCT Parent Application Number	Parent Filing Date	Parent Patent Number
	PCT/US00/15406	June 2, 2000	

I HEREBY APPOINT the following registered attorneys and agents of the law firm of FOLEY & LARDNER to have full power to prosecute this application and any continuations, divisions, reissues, and reexaminations thereof, to receive the patent, and to transact all business in the United States Patent and Trademark Office connected therewith:

RUSSELL J. BARRON	Reg. No. 29,512

ENHANCED DIGITAL IMAGE FILE**

CROSS-REFERENCE TO RELATED APPLICATIONS

The present application is a continuation-in-part of U.S. Patent Application No. 09/522,721, filed March 10, 2000, which claims the benefit of priority from U.S. Provisional Application No. 60/125,824, filed March 24, 1999. The present application also
5 claims the benefit of priority from U.S. Provisional Application Nos. 60/146,726, filed August 2, 1999, 60/149,737, filed August 19, 1999, 60/155,404, filed September 22, 1999, and 60/169,559, filed December 8, 1999.

10 **FIELD OF THE INVENTION**

The present invention is directed to a system and a method for producing enhanced digital images and, in particular, to a system and a method for producing enhanced digital images having improved resolution for zooming and/or panning within a single file.

15 **BACKGROUND OF THE INVENTION**

In the field of digital imaging, the primary design challenge is that the viewer desires ideal image quality delivered to the viewer's display system. In a limited-bandwidth network, such as the Internet, it is important to transfer the image data in a
20 reasonable amount of time. However, ideal image quality requires an enormous amount of digital data. Today's networks are not capable of transferring an ideal digital image in a reasonable time.

It is known that one can view a digital image on a display screen and "zoom" (i.e., magnify a portion of an image and

FILING RECEIPT

OC00000005438064

Date Mailed: 09/29/2000

Receipt is acknowledged of this nonprovisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Foreign Applications

If Required, Foreign Filing License Granted 09/28/2000

Title

System and method for providing an enhanced digital image file

Preliminary Class

358

Data entry by : DUNCAN, KIMBERELY

Team : OIPE

Date: 09/29/2000

**LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15**

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PLEASE NOTE the following information about the Filing Receipt:

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

UTILITY PATENT APPLICATION
TRANSMITTAL

Assistant Commissioner for Patents
Box PATENT APPLICATION
Washington, D.C. 20231

Sir:

Transmitted herewith for filing under 37 C.F.R. § 1.53(b) is the nonprovisional utility patent application of:

Eliot I. Bernstein
Brian G. Utley

Enclosed are:

- Specification, Claim(s), and Abstract (30 pages).
- Informal drawings (7 sheets, Figures 1-7).
- Unexecuted Declaration and Power of Attorney (4 pages).
- Assignment of the invention to lviewit.com, Inc..
- Assignment Recordation Cover Sheet.
- Check in the amount of \$40.00 for Assignment recordation.
- Small Entity statement.
- Information Disclosure Statement.
- Form PTO-1449 with copies of ___ listed reference(s).

The filing fee is calculated below:

	Claims as Filed	Included in Basic Fee	Extra Claims	Rate	Fee Totals
Basic Fee				\$690.00	\$690.00
Total Claims:	31	- 20	= 11	x \$18.00	= \$198.00
Independents:	3	- 3	= 0	x \$78.00	= \$0.00
If any Multiple Dependent Claim(s) present:				+ \$0.00	= \$0.00
				SUBTOTAL:	= \$888.00
[]				Small Entity Fees Apply (subtract 1/2 of above):	= \$0.00
				TOTAL FILING FEE:	= \$888.00

- A check in the amount of \$888.00 to cover the filing fee is enclosed.
- The required filing fees are not enclosed but will be submitted in response to the Notice to File Missing Parts of Application.
- The Assistant Commissioner is hereby authorized to charge any additional fees which may be required regarding this application under 37 C.F.R. §§ 1.16-1.17, or credit any overpayment, to Deposit Account No. 06-1447. Should no proper payment be enclosed herewith, as by a check being in the wrong amount, unsigned, post-dated, otherwise improper or informal or even entirely missing, the Assistant Commissioner is authorized to charge the unpaid amount to Deposit Account No. 06-1447.

Please direct all correspondence to the undersigned attorney or agent at the address indicated below.

Respectfully submitted,

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System and Method for Providing an Enhanced Digital Image File

(Attorney Docket No. 57103/121)

the specification of which (check one)

 X is attached hereto.

 was filed on as United States Application Number or PCT International Application Number and was amended on (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, §1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code §119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or §365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date
60/125,824	3/24/1999

FORMALITIES LETTER

OC000000005438065

Date Mailed: 09/29/2000

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

MP
filed on 09/29/2000
DCL/ite

Filing Date Granted

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is unsigned.
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 130.

A copy of this notice **MUST** be returned with the reply.

PART 1 - ATTORNEY/APPLICANT COPY

Atty. Dkt. No. 57103/121

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I HEREBY DECLARE:

THAT my residence, post office address, and citizenship are as stated below next to my name;

THAT I believe I am the original, first, and sole inventor (if only one inventor is named below) or an original, first, and joint inventor (if plural inventors are named below or in an attached Declaration) of the subject matter which is claimed and for which a patent is sought on the invention entitled

System and Method for Providing an Enhanced Digital Image File

(Attorney Docket No. 57103/121)

the specification of which (check one)

 is attached hereto.

 X was filed on 8/2/2000 as United States Application Number or PCT International Application Number 09/630,939 and was amended on (if applicable).

THAT I do not know and do not believe that the same invention was ever known or used by others in the United States of America, or was patented or described in any printed publication in any country, before I (we) invented it;

THAT I do not know and do not believe that the same invention was patented or described in any printed publication in any country, or in public use or on sale in the United States of America, for more than one year prior to the filing date of this United States application;

THAT I do not know and do not believe that the same invention was first patented or made the subject of an inventor's certificate that issued in any country foreign to the United States of America before the filing date of this United States application if the foreign application was filed by me (us), or by my (our) legal representatives or assigns, more than twelve months (six months for design patents) prior to the filing date of this United States application;

THAT I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above;

THAT I believe that the above-identified specification contains a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, and sets forth the best mode contemplated by me of carrying out the invention; and

Atty. Dkt. No. 57103/121

THAT I acknowledge the duty to disclose to the U.S. Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

I HEREBY CLAIM foreign priority benefits under Title 35, United States Code § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate, or § 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below any foreign application for patent or inventor's certificate or of any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application Number	Country	Foreign Filing Date	Priority Claimed?	Certified Copy Attached?

I HEREBY CLAIM the benefit under Title 35, United States Code § 119(e) of any United States provisional application(s) listed below.

U.S. Provisional Application Number	Filing Date
60/125,824	3/24/1999
60/146,726	8/2/1999

(414) 271-2400

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR PROVIDING AN
ENHANCED DIGITAL VIDEO FILE

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional
Application No. 60/137,297, filed June 3, 1999, U.S. Provisional
Application No. 60/155,404, filed September 22, 1999, U.S.
5 Provisional Application No. 60/169,559, filed December 8, 1999,
and PCT International Application No. _____, filed June 2,
2000.

FIELD OF THE INVENTION

The present invention relates generally to video
10 imaging. More specifically, the present invention relates to a system
and method for providing high quality digital video files for streaming
across a network.

BACKGROUND OF THE INVENTION

Streaming video is a technique by which video is played
15 in real time as it is downloaded over the Internet, as opposed to
storing it in a local file first. A video player decompresses and plays
the data as it is transferred to a user computer over the World-Wide
Web. Streaming video avoids the delay entailed in downloading an
entire file and then playing it with a plug-in application. Streaming
20 video requires a communications connection (e.g., a network,
Internet, etc.) and a computer powerful enough to execute the
decompression algorithm in real time.

Sent two months after filing for inventor review, this contradicts statements to VA Bar that inventors had time to review and change applications.

Re: U.S. Patent Application
Title: System And Method For Providing An Enhanced Digital Video File
Inventor(s): Bernstein et al.
Our Ref.: 57103/116

Dear Brian:

Enclosed please find the final draft of the above-referenced patent application which was filed with the U. S. Patent and Trademark Office on June 5, 2000 as Application No. 09/587,734. I have also enclosed various formal papers which require the inventors' signatures.

Please have the inventors thoroughly read the patent application, including the specification, claims, and drawings, to ensure that it provides an accurate and complete description of the invention. The written description should be sufficiently complete to enable someone of ordinary skill in the art to make and use the invention. The application must describe the "best mode" contemplated by the inventors for carrying out the invention, i.e., in order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret. If, after review of the application, the inventors find that anything in the application is incomplete, inaccurate, untrue, or possibly misleading, please contact me immediately so we can discuss the matter. If any typographical, grammatical, or other minor formal errors are found, please have them noted in a separate memo to me such that I can correct them by amendment at a later date.

If everything appears to be in order, please have the inventors read, sign, and date the Declaration and Power of Attorney form at the colored tags. By executing this document, they will be verifying the originality of their invention and acknowledging their

Page 2

duty to disclose to the U.S. Patent and Trademark Office any information of which they are aware that could be material to the examination of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Note that the Declaration is signed under penalty of perjury, so careful consideration should be paid to its contents before signing.

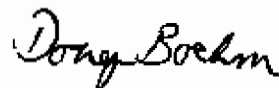

Each inventor should also read, sign, and date the enclosed Assignment and Agreement, which must be executed in the presence of a Notary Public. By executing the Assignment, they will be acknowledging their obligation to Ivivewit Holdings, Inc. by assigning all their rights in the invention to the company.

After the inventors execute the formal papers, please return the fully executed documents to me as soon as possible. You may keep the copy of the patent application for your records.

Now that the patent application is on file, any device covered by the claims of the application may be marked "Patent Applied For" or "Patent Pending" or an abbreviation thereof. This "Patent Pending" marking is not mandatory, as it only serves as a cautionary warning to would-be competitors that the device may be subject to patent protection in the future. However, this marking should be continued only as long as the application is still pending in the United States Patent and Trademark Office. If the application issues as a patent, the appropriate patent number should replace this marking. If the application should become abandoned and this is the only application pertinent to the device, then the marking should be eliminated entirely.

If you have any questions regarding any of the above, please do not hesitate to contact me.

Very truly yours,

Douglas A. Boehm

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

eliot 3/20/2004 2:24:44 AM
 Oval

1 year after filing and 5 months after supposedly signing an oath for Foley, the Oath is still missing???

An application number and filing date have been accorded to this application, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is unsigned.
- To avoid abandonment, a late filing fee or oath or declaration surcharge as set forth in 37 CFR 1.16(e) of \$130 for a non-small entity, must be submitted with the missing items identified in this letter.
- The balance due by applicant is \$ 130.

A copy of this notice MUST be returned with the reply.

Thank You

Customer Service Center

Initial Patent Examination Division (703) 308-1202

PART 2 - COPY TO BE RETURNED WITH RESPONSE

1 training that you've had or maybe you -- you did 113

2 indicate that you had any degree in mathematics.

3 Is that something that you have some experience

4 from from some other portion of your employment

5 or background?

6 A. I have training and experience in

7 mathematics.

8 Q. I'm sorry.

9 A. I say I have training and experience

10 in mathematics.

11 Q. How about in the scaling video

12 invention; is that part of what you've already

13 described?

14 A. That is readily derived from a

15 mathematical background.

16 Q. How about the remote control video

17 applications?

18 A. That's different.

19 Q. Okay. Now going back to --

20 A. What --

21 Q. -- the patent dealing specifically

22 with remote control applications.

23 A. What I did there was I established

24 the fact that the design point that Elicot had

25 discovered in optimizing the quality of the

1 picture that would be transmitted across the 114
2 internet at a given speed, I identified that
3 which he had discovered by an ad hoc process; I
4 discovered the structural basis for that
5 optimization.

6 Q. Okay. So that was something that
7 was outside the scope of what he had already,
8 what Elliot had already discovered?

9 A. It really established why it worked.

10 Q. And is your name on any patent or
11 patent application with regard to that particular
12 technology?

13 A. It possibly is. I don't recall how
14 many of those my name is on since I didn't keep
15 any of those records.

16 Q. How about camera zoom applications?

17 A. Okay. How about camera zoom
18 applications?

19 Q. Is there any patent or patent
20 application dealing with camera zoom
21 applications?

22 A. Not specifically. It was, it was
23 determined that there is a correlation between
24 the zoom and pan that had been developed and what
25 is being used in cameras.

Re: PCT International Patent Application
 Title: System and Method for Video Playback Over a Network
 Inventor(s): Bernstein et al.
 Our Ref.: 57103/117

Dear Brian:

Enclosed please find the first draft of the above-referenced patent application (last page marked 001.793381.1), which has been prepared in accordance with the previously filed U.S. provisional patent applications (MLG Docket Nos. 5865-4 and 5865-4.1). As you know, a careful and critical review of this draft application by you and the inventors is imperative to ensure that the you are all satisfied with the content of the application and the proposed claim scope.

I note that Jeff Friedstein is named as a co-inventor on this application pursuant to Eliot Bernstein's instructions. Accordingly, Jeff must review a draft of the application before filing.

I also note that the deadline for filing this application in order to claim priority to all related provisional applications is Wednesday, June 7, 2000. Therefore, we must receive your comments as soon as possible.

Please have the inventor(s) thoroughly read the application draft, including the specification, claims, and drawings, to ensure that it provides a complete and accurate description of the invention. The attached "Inventor Information Sheet" provides a brief explanation of the parts of a utility patent application, the duty of disclosure, and inventorship. I would also like you to personally read and comment on this draft.

Mr. Brian G. Utley
June 6, 2000
Page 2

This PCT application incorporates all of the subject matter of U.S. Provisional Patent Application No. 60/137,921, filed June 7, 1999 (MLG Docket No. 5865-4) and U.S. Provisional Patent Application No. 60/141,440, filed June 29, 1999 (MLG Docket No. 5865-4.1).

You and the inventors should feel free to supplement, correct, or modify any part of the application. In particular, please review the subject matter disclosed in the two above-referenced provisional patent applications. After your review, if you or the inventors feel that any subject matter from these three provisional patent applications should be reflected in the draft PCT application, but is not, please notify me immediately.

The drawings attached to the application are informal sketches that will suffice for purposes of filing. Formal drawings will be prepared at a later date, as they are required for publication of the PCT application.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

Please have the inventors mark the appropriate changes on this copy of the application, make a copy of the changes, and return the hand-corrected copy to me via facsimile. A revised application incorporating the changes will then be submitted to you for your approval. We will handle execution of the formal papers at a later date.

Pursuant to your instructions, to preserve foreign filing options, I plan to designate all of the countries for filing under the PCT (see attached list of PCT Contracting States). Note, however, that not all foreign countries are members of the PCT (e.g., Taiwan), so to maintain the benefit of priority to the U.S. applications, we would have to file foreign national applications immediately in those non-PCT countries. This would require up-front translation costs and sufficient time for our foreign associates to prepare and file the applications before June 7, 2000. It is my understanding that you DO NOT want us to file in any countries other than those that are members of the PCT. Please let me know IMMEDIATELY if this understanding is not correct.

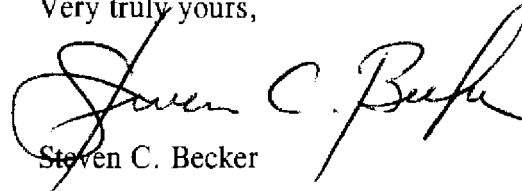

elliot 3/20/2004 5:37:06 PM
Line

The Company is not in possession of these records or hand corrected copies and Foley claims to have retained no records of the files in the VA Bar Response.

Mr. Brian G. Utley
June 6, 2000
Page 3

If you or the inventors have any questions, please do not hesitate to contact me.
I look forward to receiving at least your preliminary comments on the application by
tomorrow.

Very truly yours,

Steven C. Becker

No carbon copies to anyone.	

Strange that Foley starts suddenly putting all these disclaimers regarding inventors.

PC 11 Application Form Application 1/2/2004

Screen and Method for Video Playback Over a Network

Inventor(s): Bernstein, et al.

INVENTOR INFORMATION SHEET

Sections of a Utility Patent Application

- Background of the Invention

The Background of the Invention describes the technology that existed before your invention, i.e., the “prior art”. This section typically discusses how the need for your invention arose, describes how others attempted to satisfy that need prior to the time of your invention, and points out the deficiencies of the prior art in meeting that need. If you aware of any other prior art that should be mentioned in this background section, please supplement this section and forward any literature that you might have to me.

- Summary of the Invention

The Summary of the Invention section is merely a brief paraphrasing of the basic claims, along with a statement of the objectives and advantages of the present invention.

- Brief Description of the Drawings

The Brief Description of the Drawings is merely a listing of the figures, and should be self-explanatory.

- Detailed Description of the Preferred Embodiments

The Detailed Description of the Preferred Embodiments section should provide a full, clear, and concise description of your invention so that any person skilled in the art could make or use the invention. Furthermore, the application must describe the “best mode” contemplated by the inventor(s) for carrying out the invention. In order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret.

- Claims

The claims are the most important part of the patent application. They precisely define the invention and determine the scope of legal protection granted by the patent. The claims must particularly point out and distinctly claim the invention. The claimed subject matter must be distinguishable over that which the prior art suggests to those skilled in this field. Accordingly, the claims should be scrutinized with a view toward protecting your precise

invention and those concepts which could be considered an outgrowth of it, yet not encompassing knowledge from the prior art or obvious extensions thereof. In other words, the scope of the claims must be broad enough to provide that patent protection to which you are entitled, yet narrow enough to be distinguishable over the prior art. The terminology of the claims must be adequately supported by the description contained in the specification. Please keep in mind that all dependent claims, which are identifiable by the phrase "according to claim x" or "of claim x", are interpreted as containing all of the limitations of the other claims which are referred to by that dependent claim. Thus, the independent claims are the broadest statement of your invention, and the dependent claims provide additional limitations to narrow the scope of your invention. Although the inventive concepts of each set of independent claims are interrelated, please keep in mind that they must be critically distinguished from each other. Each set of claims must stand on its own merit.

- **Abstract of the Disclosure**

The Abstract of the Disclosure section is a very brief description of what the application generally discloses.

- **Drawings**

The Drawings section should be self-explanatory.

Duty of Disclosure

All individuals associated with the filing or prosecution of a patent application are under a duty of candor and good faith to the U.S. Patent and Trademark Office. This duty specifically includes a duty to disclose any information known to be material to the patentability of any claim of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Pursuant to this duty of disclosure, we will file an Information Disclosure Statement with the U.S. application listing the patent documents found in any prior art searches, as well as any technical articles mentioned in the disclosure materials. Accordingly, if any additional information relevant to your invention should come to your attention at any time before issuance of the patent, please immediately let us know so we can either include it in the Information Disclosure Statement or submit a Supplemental Information Disclosure Statement.

Inventorship

The proper inventors would be those people who contributed to the subject matter of the invention as defined in the claims of the application. There may be joint

inventors even though they did not physically work together or at the same time, did not make the same type or amount of contribution, or did not make a contribution to the subject matter of every claim in the patent. It is our understanding that the above-identified persons are to be named as co-inventors of this application. If this is not accurate, please call us to discuss the conception and development of each of the different embodiments of the invention, so that we will be able to confirm your determination of proper inventorship before filing the application.

TITLE OF THE INVENTION

SYSTEM AND METHOD FOR VIDEO PLAYBACK OVER A NETWORK

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,921, filed June 7, 1999, and U.S. Provisional Application No. 60/141,440, filed June 29, 1999.

5 FIELD OF THE INVENTION

The present invention relates generally to a system and method for playing a video program over a network. The present invention also relates to a system and method for controlling a video device over a network.

10 BACKGROUND OF THE INVENTION

The widespread and ever-growing use of communication networks, such as the Internet and other computer-to-computer communication networks, for the dissemination of information, has fueled the need to provide for the transmission of video data over these networks. Currently, the transmission of video data over networks has been less than optimal, given current bandwidth and technology constraints. These constraints have impeded the ability to offer enhanced resolution and/or full motion video data over these networks.

20 The Internet marketplace is demanding enhanced resolution and high definition streaming video and precise representations of video images, objects, and events. Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file

Re: PCT International Patent Application
Title: System and Method for Video Playback Over a Network
Inventor(s): Bernstein et al.
Our Ref.: 57103/117

Dear Brian:

Enclosed please find a first draft of the claims of the above-referenced patent application, which have been prepared in accordance with oral disclosure provided to us by Eliot Bernstein yesterday and further in accordance with two former provisional applications (i.e., old docket numbers 5865-4 and 5865-4.1). As you know, a careful and critical review of these claims by you and the inventors is imperative to ensure that the you are all satisfied with the proposed claim scope.

Eliot has informed us that Jeff Friedstein is to be named as a co-inventor of this invention. Accordingly, please provide a copy of these claims and these instructions to Jeff at your earliest opportunity.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

If you need any assistance in reviewing the claims, please feel free to contact me.

Missing cover page with inventors listed on it

WHAT IS CLAIMED IS:

- 1 1. A system for video playback over a network,
2 comprising:
3 a video playback device configured to transmit a video
4 signal from a non-volatile storage medium; and
5 a computer coupled to the video playback device
6 configured to receive the video signal and to transmit the video
7 signal over a network.
- 1 2. The system of claim 1, further comprising a capture
2 device coupled between the video playback device and the
3 computer, the capture device configured to receive the video signal
4 and to generate a digital video signal based on the video signal.
- 1 3. The system of claim 2, wherein the computer utilizes
2 video conferencing software to receive the digital video signal, to
3 perform at least one processing step thereon, and to provide the
4 digital video signal over the network.
- 1 4. The system of claim 3, wherein the processing step
2 includes configuring the digital video signal for full screen display on
3 a user computer.
- 1 5. The system of claim 4, wherein the capture device is
2 configured to capture the video signal at a full screen size.
- 1 6. The system of claim 1, wherein the network includes
2 the Internet.

Re: PCT International Patent Application
Title: System and Method for Video Playback Over a Network
Inventor(s): Bernstein et al.
Our Ref.: 57103/117

Dear Brian:

Enclosed please find the first draft of the above-referenced patent application (last page marked 001.793381.1), which has been prepared in accordance with the previously filed U.S. provisional patent applications (MLG Docket Nos. 5865-4 and 5865-4.1). As you know, a careful and critical review of this draft application by you and the inventors is imperative to ensure that the you are all satisfied with the content of the application and the proposed claim scope.

I note that Jeff Friedstein is named as a co-inventor on this application pursuant to Eliot Bernstein's instructions. Accordingly, Jeff must review a draft of the application before filing.

I also note that the deadline for filing this application in order to claim priority to all related provisional applications is Wednesday, June 7, 2000. Therefore, we must receive your comments as soon as possible.

Please have the inventor(s) thoroughly read the application draft, including the specification, claims, and drawings, to ensure that it provides a complete and accurate description of the invention. The attached "Inventor Information Sheet" provides a brief explanation of the parts of a utility patent application, the duty of disclosure, and inventorship. I would also like you to personally read and comment on this draft.

Mr. Brian G. Utley
June 6, 2000
Page 2

This PCT application incorporates all of the subject matter of U.S. Provisional Patent Application No. 60/137,921, filed June 7, 1999 (MLG Docket No. 5865-4) and U.S. Provisional Patent Application No. 60/141,440, filed June 29, 1999 (MLG Docket No. 5865-4.1).

You and the inventors should feel free to supplement, correct, or modify any part of the application. In particular, please review the subject matter disclosed in the two above-referenced provisional patent applications. After your review, if you or the inventors feel that any subject matter from these three provisional patent applications should be reflected in the draft PCT application, but is not, please notify me immediately.

The drawings attached to the application are informal sketches that will suffice for purposes of filing. Formal drawings will be prepared at a later date, as they are required for publication of the PCT application.

During the review, please keep in mind that independent claims 1, 12, 19, 24, 31, and 38 are the broadest statements of the invention, and the remaining dependent claims add limitations to further define different embodiments of the invention. Please note that it is the inventors' legal obligations to "read and understand" the contents of the application - including the claims. Each inventor will have to sign a declaration attesting that they did so.

Please have the inventors mark the appropriate changes on this copy of the application, make a copy of the changes, and return the hand-corrected copy to me via facsimile. A revised application incorporating the changes will then be submitted to you for your approval. We will handle execution of the formal papers at a later date.

Pursuant to your instructions, to preserve foreign filing options, I plan to designate all of the countries for filing under the PCT (see attached list of PCT Contracting States). Note, however, that not all foreign countries are members of the PCT (e.g., Taiwan), so to maintain the benefit of priority to the U.S. applications, we would have to file foreign national applications immediately in those non-PCT countries. This would require up-front translation costs and sufficient time for our foreign associates to prepare and file the applications before June 7, 2000. It is my understanding that you DO NOT want us to file in any countries other than those that are members of the PCT. Please let me know IMMEDIATELY if this understanding is not correct.

FOLEY & LARDNER

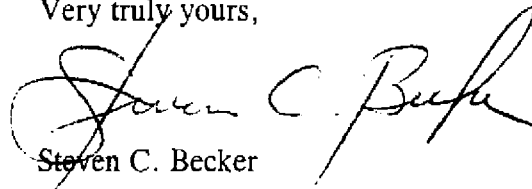

Mr. Brian G. Utley

June 6, 2000

Page 3

If you or the inventors have any questions, please do not hesitate to contact me. I look forward to receiving at least your preliminary comments on the application by tomorrow.

Very truly yours,

A handwritten signature in black ink, appearing to read "Steven C. Becker". The signature is written in a cursive style with a large, looping initial "S".

Steven C. Becker

PCT International Patent Application entitled
System and Method for Video Playback Over a Network
Inventor(s): Bernstein, et al.

INVENTOR INFORMATION SHEET

Sections of a Utility Patent Application

- **Background of the Invention**

The Background of the Invention describes the technology that existed before your invention, i.e., the "prior art". This section typically discusses how the need for your invention arose, describes how others attempted to satisfy that need prior to the time of your invention, and points out the deficiencies of the prior art in meeting that need. If you are aware of any other prior art that should be mentioned in this background section, please supplement this section and forward any literature that you might have to me.

- **Summary of the Invention**

The Summary of the Invention section is merely a brief paraphrasing of the basic claims, along with a statement of the objectives and advantages of the present invention.

- **Brief Description of the Drawings**

The Brief Description of the Drawings is merely a listing of the figures, and should be self-explanatory.

- **Detailed Description of the Preferred Embodiments**

The Detailed Description of the Preferred Embodiments section should provide a full, clear, and concise description of your invention so that any person skilled in the art could make or use the invention. Furthermore, the application must describe the "best mode" contemplated by the inventor(s) for carrying out the invention. In order to obtain a valid patent, no important details about the preferred embodiment of the invention can be withheld as a trade secret.

- **Claims**

The claims are the most important part of the patent application. They precisely define the invention and determine the scope of legal protection granted by the patent. The claims must particularly point out and distinctly claim the invention. The claimed subject matter must be distinguishable over that which the prior art suggests to those skilled in this field. Accordingly, the claims should be scrutinized with a view toward protecting your precise

invention and those concepts which could be considered an outgrowth of it, yet not encompassing knowledge from the prior art or obvious extensions thereof. In other words, the scope of the claims must be broad enough to provide that patent protection to which you are entitled, yet narrow enough to be distinguishable over the prior art. The terminology of the claims must be adequately supported by the description contained in the specification. Please keep in mind that all dependent claims, which are identifiable by the phrase "according to claim x" or "of claim x", are interpreted as containing all of the limitations of the other claims which are referred to by that dependent claim. Thus, the independent claims are the broadest statement of your invention, and the dependent claims provide additional limitations to narrow the scope of your invention. Although the inventive concepts of each set of independent claims are interrelated, please keep in mind that they must be critically distinguished from each other. Each set of claims must stand on its own merit.

- Abstract of the Disclosure

The Abstract of the Disclosure section is a very brief description of what the application generally discloses.

- Drawings

The Drawings section should be self-explanatory.

Duty of Disclosure

All individuals associated with the filing or prosecution of a patent application are under a duty of candor and good faith to the U.S. Patent and Trademark Office. This duty specifically includes a duty to disclose any information known to be material to the patentability of any claim of the application. Material information could include patents, brochures and other publications (including those authored by a competitor, inventor, or co-worker), published industry standards, as well as information on possible prior uses of the invention, prior sales or offers to sell the invention, prior knowledge of the invention by others, prior invention by another, inventorship conflicts, and the like. This duty of disclosure is an important requirement of the law, and continues throughout the entire prosecution of the patent application until the application issues as a patent. Pursuant to this duty of disclosure, we will file an Information Disclosure Statement with the U.S. application listing the patent documents found in any prior art searches, as well as any technical articles mentioned in the disclosure materials. Accordingly, if any additional information relevant to your invention should come to your attention at any time before issuance of the patent, please immediately let us know so we can either include it in the Information Disclosure Statement or submit a Supplemental Information Disclosure Statement.

Inventorship

The proper inventors would be those people who contributed to the subject matter of the invention as defined in the claims of the application. There may be joint

inventors even though they did not physically work together or at the same time, did not make the same type or amount of contribution, or did not make a contribution to the subject matter of every claim in the patent. It is our understanding that the above-identified persons are to be named as co-inventors of this application. If this is not accurate, please call us to discuss the conception and development of each of the different embodiments of the invention, so that we will be able to confirm your determination of proper inventorship before filing the application.

Note	
The first page now states 118 and the rest is 117.	

SYSTEM AND METHOD FOR VIDEO PLAYBACK OVER A NETWORK

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims the benefit of U.S. Provisional Application No. 60/137,921, filed June 7, 1999, and U.S. Provisional Application No. 60/141,440, filed June 29, 1999.

5 FIELD OF THE INVENTION

The present invention relates generally to a system and method for playing a video program over a network. The present invention also relates to a system and method for controlling a video device over a network.

10 BACKGROUND OF THE INVENTION

The widespread and ever-growing use of communication networks, such as the Internet and other computer-to-computer communication networks, for the dissemination of information, has fueled the need to provide for the transmission of video data over these networks. Currently, the transmission of video data over networks has been less than optimal, given current bandwidth and technology constraints. These constraints have impeded the ability to offer enhanced resolution and/or full motion video data over these networks.

20 The Internet marketplace is demanding enhanced resolution and high definition streaming video and precise representations of video images, objects, and events. Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file

The present invention relates generally to a system and method for playing a video program over a network. The present invention also relates to a system and method for controlling a video device over a network.

10 BACKGROUND OF THE INVENTION

The widespread and ever-growing use of communication networks, such as the Internet and other computer-to-computer communication networks, for the dissemination of information, has fueled the need to provide for the transmission of video data over these networks. Currently, the transmission of video data over networks has been less than optimal, given current bandwidth and technology constraints. These constraints have impeded the ability to offer enhanced resolution and/or full motion video data over these networks.

20 The Internet marketplace is demanding enhanced resolution and high definition streaming video and precise representations of video images, objects, and events. Streaming video is a technique by which video is played in real time as it is downloaded over the Internet, as opposed to storing it in a local file

II. New International Application

TITLE	SYSTEM AND METHOD FOR VIDEO PLAYBACK OVER A NETWORK
-------	---

Earliest priority date (Day/Month/Year)
07 June 1999

SCREENING DISCLOSURE INFORMATION: In order to assist in screening the accompanying international application for purposes of determining whether a license for foreign transmittal should and could be granted and for other purposes, the following information is supplied. (Note: check as many boxes as apply):

- A. The invention disclosed was not made in the United States.
- B. There is no prior U.S. application relating to this invention.
- C. The following prior U.S. application(s) contain subject matter which is related to the invention disclosed in the attached international application. (NOTE: priority to these applications may or may not be claimed on form PCT/RO/101 (Request) and this listing does not constitute a claim for priority)

Application no.	60/137,921	application no.	60/141,440
Application no.		application no.	

- D. The present international application is identical to contains less subject matter than that found in the prior U.S. application(s) identified in paragraph C above.
- E. The present international application contains additional subject matter not found in the prior U.S. application(s) identified in paragraph C above. The additional subject matter is found throughout the application and DOES NOT ALTER MIGHT BE CONSIDERED TO ALTER the general nature of the invention in a manner which would require the U.S. application to have been made available for inspection by the appropriate defense agencies under 35 U.S.C. 181 and 37 CFR 5.1. See 37 CFR 5.15.

III. Comments on the Amendments to the Abstract by the ISA/US under Rule 38. The following document(s) is(are) enclosed:

- A. A Response to the Invitation to Correct Defects in the International Application
- B. A Power of Attorney (General or Regular)
- C. Replacement pages:

pages		of the request (PCT/RO/101)	pages		of the figures
pages		of the description	pages		of the abstract
pages		of the claims			

- D. Submission of Priority Documents
- E. Fees as specified on attached Fee Calculation sheet form PCT/RO/101 annex

IV. A Request for Rectification under PCT Rule 91 A Petition A Sequence Listing Diskette

V. Other (please identify): PCT-EASY Diskette; Fee Calculation Sheet; and Postcard

The person signing this form is the: Applicant Attorney/Agent (Reg. No. 42,308) Common Representative

Dear Brian:

Enclosed for your records is a copy of the Response to the Invitation to Correct Defects in the International Application, which was filed with the United States Patent and Trademark Office on August 18, 2000, in connection with the above-identified application.

We will keep you informed of all future developments as they occur. Please feel free to contact me with any questions or comments regarding this matter.

Very truly yours,

Douglas A. Boehm

developed image can be enlarged to sizes of between 8"x8" and 8"x12", or to any other appropriate size. The developed image is enlarged to provide additional photo information to scanning device 18. The developed image can be enlarged many times before the granularity of the image is visible to the human eye. An enlargement magnification capability of up to 1700 times or more may be attained for most views or scenes. It is, however, recommended that larger enlargement sizes be obtained for smaller developed images. As mentioned, the step of enlarging may not be necessary in all cases (e.g., where the size of the print film image or developed image is large enough to provide sufficient data to scanning device 18).

*and
over
target
frame*

At step 58, the enlarged image is scanned by scanning device 18 in order to generate a bitmap image file or other digital image file, such as, JPEG, GIF, or other files. Scanning occurs at a high scan density (e.g., 100 dpi or more, greater than 200 dpi, or about 600 dpi) to provide a large number of pixels in the resulting digital image file. Contrary to the teachings of the prior art, a large number of pixels are provided in the digital image file. According to one example, a sufficient number of pixels are provided in the enhanced digital image file to allow a user to magnify the digitized image in the viewing window of display 30 by a magnification factor of ~~two~~ without pixelation. Alternatively, a sufficient number of pixels are provided to allow the user to magnify the digitized image by a magnification factor of five, ten, twenty, one-hundred, or more.

Additional frame also require handling properly in the usability aspect of the file

additional pixels

no. 1

*1.5 2x
^ 1*

According to one exemplary embodiment, the number of pixels provided in the enhanced digital image file is based on a viewing window size and the desired magnification ratio. By

*5000 dpi 1 bit
600 - 1400 dpi*

*check file size instantly
time/file size*

providing more pixels in the enhanced digital image file than is required for a full-window view in the viewing window, the user is able to zoom and pan within the digital image during viewing without pixelation.

5 FIG. 7 illustrates relationships between a source image (e.g., a scanned print film image), a viewing window (e.g., a portion of display 30), a viewing image (e.g., a subset of pixels from the source image to be displayed in the viewing window), and a target image (e.g., the enhanced digital image file). The following
10 parameters and description are for the purpose of creating large, clear, zoomable and panable images from a variety of photographic, non-digital source images.

The source image (si) has a source image height (sih) and a source image width (siw). Thus, the source image aspect ratio (siar) can be determined as:

15 (siar) can be determined as:

$siar = sih/siw$

1/5 a viewing window a display not made of pixels, i.e. TV.

20 The viewing window (vw) is the window defined in pixels, within which is to be displayed the source image. The viewing window (vw) has a viewing window height (vwh) and a viewing window width (vww), both defined in pixels. Thus, the viewing window aspect ratio can be determined as:

$vwar = vwh/vww$

this could be striken

or etc...

It is noted that the source image (si) may have a different aspect ratio than the viewing window (vw). To place the source image (si) in the viewing window (vw), a subset of pixels

trying to solve for unknown by unknown

(VW)

from the source image (si) must be selected and scaled. The viewing image height (v_{ih}) and viewing image width (v_{iw}) within viewing window (vw) can be determined by comparing the source image aspect ratio (s_{iar}) to the viewing window aspect ratio (v_{war}),

as shown:

This relationship is illustrated in FIG. 7. Note that the

source image (si) will be scaled to fit within the viewing window (vw). When zooming into the image, the targeted portion of the zoomed image will fill the viewing window (vw) as described below.

The magnification factor (mf) is defined as the ratio of the viewing image to the target image. This ratio will determine the amount of zoom available without causing the image to distort due to fewer pixels in the image being displayed than available in the display medium. For a magnification factor (mf), a target image size (tis) having a target image width (tiw) and a target image height (tih) can be determined as the magnification factor (mf) times the viewing image size (vis):

VI / TI } what size?

$\frac{T}{V} = mf$

$\frac{VIS}{TIS} = MF$

$\frac{VIS}{TIS} = MF$

$TIS = \frac{VIS}{MF}$

$vis = v_{iw} * v_{ih}$; and $tis = tiw * tih = vis * mf$

$\frac{VIS}{TIS} = MF$

$\frac{VIS}{TIS} = MF$

To obtain the target image height and width:

$TIS = VIS$
 $TIS = \frac{VIS}{MF}$

$VIS = TIS * MF$

$VIS = TIS * MF$
 $TIS = \frac{VIS}{MF}$

$$TIW^2 = \frac{TIH}{SIAR}$$

$$SIAR \times TIW^2 = TIH$$

$$SIAR = \frac{TIH}{TIW^2}$$

$$SIAR = \frac{TIH}{TIW}$$

$$SIAR = TIAR$$

$$tiw = \sqrt{\frac{tis}{siar}}$$

and

$$TIW^2 = \frac{TIH}{SIAR}$$

$$\frac{TIH}{TIW} = SIAR$$

$$tis = tiw \times siar$$

SIAR = TIAR - IS THIS INTENDED?

$$\frac{TIW^2}{SIAR} = \frac{TIH}{SIAR} \quad (TIH \times TIW)$$

$$\frac{1}{SIAR} = \frac{TIH}{1}$$

what about cropping
letterbox formats
stretching
what about a SI that is 8x6 and you enlarge it to 8x10.

The relationship between the target image and the viewing image is shown in FIG. 7. The relationship between the target image and the viewing window is also shown. A zoom to the maximum level will be shown in the viewing window as illustrated at drawing 120. By panning the viewing window, every portion of the target image may be viewed from each level of zooming.

To determine the minimum scan density (msd) to avoid pixelation at the desired magnification factor (mf):

$$msd = \frac{tis}{mf}$$

$$msd = \frac{100}{8} = 12.5$$

why is the mf part of this equation?
Explain where's dpi?

EXAMPLE 1

Determine the target image size and dimensions, and minimum scan density for the following case:

- Source Image = 4" x 6"
- Desired Magnification Factor = 20
- Source Image Aspect Ratio = 4/6 = 0.8

Define the Viewing Window: assume 320h x 480w pixels

$$\text{Viewing Window Aspect Ratio} = 320 / 480 = 0.75$$

The Source Image Aspect Ratio is > the Viewing

$$\frac{4}{6} \quad (SIAR)$$

Atty. Dkt. No. 57103/120

Window Aspect Ratio:

0.8 > 0.75 therefore:

$v_{ih} = v_{wh} = 320$ pixels

$v_{iw} = v_{wh} / 0.8 = 320 / 0.8 = 400$ pixels

should be v_{wh} on p. 19

The Viewing Image size = $v_{is} = 320 \times 400 = 128,000$

pixels - *how does this equate to other, non-pixel, display mediums*

The Target Image size = $v_{is} \times 20 = 128,000 \times 20 = 2,560,000$ pixels $TIS = \frac{v_{is}}{MF}$

$TIS = \frac{128,000}{.20}$

need to reconcile this w/ formula on p. 14

The Target Image width = $\sqrt{2,560,000 / 0.8} = 1789$ pixels

The Target Image height = $1789 \times 0.8 = 1431$ pixels

$TIW = \sqrt{\frac{TIS}{SIAR}} = \sqrt{\frac{2,560,000}{.8}} = \sqrt{3,200,000} = 1789$

is the formula on p. 13 is right?

The Minimum Scan Density = $1789 / 5 = 358$ pixels per inch
 $1789 / 4 = 447.25$

The photo scan can be any scan density > ~~357~~ pixels per inch
 447.25

447.25
Thus, a 4" x 5" print film image should be scanned at greater than ~~357~~ pixels per inch to allow magnification/zoom up to 20 times in a viewing window of 320 x 240 pixels. An enhanced digital image file having 2,560,000 pixels provides a sufficient number of pixels for this example.

EXAMPLE 2

Determine the Target Image size and dimensions, and minimum scan density for the following case:

Atty. Dkt. No. 57103/120

Source Image = $4'' \times 5''$

Desired Magnification Factor = 20

Source Image Aspect Ratio = $4 / 5 = 0.8$

Define the Viewing Window: assume 360h x 400w pixels

Viewing Window Aspect Ratio = $360 / 400 = 0.9$

The Source Image Aspect Ratio is < the Viewing Window Aspect Ratio:

$0.8 < 0.9$ therefore:

$v_{1w} = v_{ww} = 400$ pixels

$v_{1h} = \frac{v_{1w}}{V_{WW}} \times 0.8 = 400 \times 0.8 = 320$ pixels

The Viewing Image size = $v_{1s} = 320 \times 400 = 128,000$ pixels

The Target Image size = $v_{1s} \times 20 = 128,000 \times 20 = 2,560,000$ pixels

Where is this relationship defined

The Target Image width = $\sqrt{2,560,000 / 0.8} = 1789$ pixels

The Target Image height = $1789 \times 0.8 = 1431$ pixels

The Minimum Scan Density = $1789 / 5 = 358$ pixels per inch

p. 15 MSF = $T_{1h} / S_{1H} = 1431 / 4 = 357.75$

The photo scan can be any scan density > ~~358~~ pixels per inch
357.75

Atty. Dkt. No. 57103/120

EXAMPLE 3

Determine the Target Image size and dimensions, and minimum scan density for the following case:

H W

Source Image = 5" x 4" (portrait orientation)
 Desired Magnification Factor = 20
 Source Image Aspect Ratio = 5 / 4 = 1.25

~~5 = H~~
~~4 = W~~
 5 = H
 4 = W

Define the Viewing Window: assume 360h x 400w pixels
 Viewing Window Aspect Ratio = 360 / 400 = 0.9

The Source Image Aspect Ratio is > the Viewing Window Aspect Ratio:

1.25 > 0.9 therefore:

$v_{ih} = v_{wh} = 360$ pixels

$v_{iw} = \frac{v_{ih}}{1.25} = 360 / 1.25 = 288$ pixels

The Viewing Image size = $v_{is} = 360 \times 288 = 103,680$ pixels

The Target Image size = $v_{is} \times 20 = 103,680 \times 20 = 2,073,600$ pixels

The Target Image width = $2,073,600 / 1.25 = 1288$ pixels

The Target Image height = $1288 \times 1.25 = 1610$ pixels

The Minimum Scan Density = $1288 / 4 = 322$ pixels per inch

$MSD = \frac{v_{ih}}{s_{ih}} = \frac{1288}{5} = 257.6$
